WHEREAS, George C. LeBlanc, secretary, Baker Steam Products, Inc., for Mrs. Karl Bitter, owner, filed, May 19, 1925, an appeal, from an order of the fire commissioner, affecting premises east side of Tibbett avenue, 273 ft. south of West 246th street, The Bronx; and

WHEREAS, the order of the fire commissioner reads:

“2. Provide a galvanized iron vent pipe connected to top of tank of not less than one and one-quarter inches in diameter for fuel oil storage tank or tanks of 1100 gallons or less, as per rule 8, sec. 6-c of Fuel Oil Rules.

“5. Provide a hydrostatic test of not less than 25 lbs. per sq. in. for all fuel oil storage tanks as per rule 21 of Fuel Oil Rules.

“6. Provide a hydrostatic test of not less than 100 lbs. per sq. in. for all Grade B Fuel Oil carrying piping, as per rule 25, sec. 2 of Fuel Oil Rules.”;

and

WHEREAS, the building is frame, two stories in height, 57 ft. by 45 ft. in area; OCCUPIED as a dwelling; and

WHEREAS, a fuel oil burning plant has been installed, consisting of a 550 gallon storage tank (having a ¾ in. vent line) buried outside the premises, a Baker oil burner and the necessary valves and piping to make a complete installation; and

WHEREAS, appellant contends that the top of the storage tank is located below the floor level; that the vent pipe is of a size mentioned in one of the tentative amendments of the fuel oil rules, and hardship would result if compelled to tear up the ground and to comply with Items No. 2, 5 and 6 of the orders.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, as to Item 2, on condition that the fuel oil storage shall be restricted to a single tank not exceeding 550 gallons and that the oil stored on premises shall be as stipulated in the fuel oil rules for domestic installation; as to Item 5, on condition that certificate of factory test shall be filed with the fire commissioner; and as to Item 6, on condition that standard wrought iron piping shall be used throughout the fuel oil equipment; and that the fuel oil equipment otherwise shall comply with the rules of the board of standards and appeals in all other respects.

536-25-A.

APPELLANT—Naday & Fleischer, Inc., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—841-847 Tiffany street, The Bronx.

MINUTES

APPEARANCES—

For Appellant: Joseph M. Stanford, J. P. Leary and Charles Van Loan.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition. CONDITIONS—As specified in resolution.

THE RESOLUTION:

(536-25-A)

WHEREAS, Naday & Fleischer, Inc., owner, filed, May 23, 1925, an appeal, affecting premises 841-847 Tiffany street, Borough of Bronx, from an order of the fire commissioner; and

WHEREAS, the order of the fire commissioner, dated May 5, 1925, reads:

"1. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ in. regulation Fire Department outlets on each story (including basements, cellars and roofs) placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ in. standard hose attached thereto. Such standpipe shall be kept constantly filled with water by means of an approved tank or pump supply and be ready for use at all times.

"Standpipe to be connected with a two-way 3 in. siamese connection with double clapper valves and caps and signs, placed on street front of building at least 18 in. and not more than 2 ft. above sidewalk in a horizontal position, accessible to the Fire Department. All connections to be of regulation Fire Department pattern and sizes. Sec. 581, Ch. 5, Code of Ordinances."

and

WHEREAS, the building is non-fireproof, two stories and basement in height, 100 ft. by 200 ft. in area at 1st story and 100 ft. by 52 ft. in area above. OCCUPIED: Basement, boiler room and janitor's quarters; 1st story, manufacturing embroidery, 65 persons, also a dead storage garage at rear; 2nd story, meeting rooms, seating capacity, 700 persons; and

WHEREAS, the appellant claims the first floor area is divided by a fire wall into two areas of 3,000 and 15,000 sq. ft.; that he has provided an automatic sprinkler system, also extinguishers and fire pails, and requests the board to be relieved of complying with the standpipe order.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that the premises shall not be extended in area, size or dimension and that the use and occupancy shall be maintained and limited to and in accordance with certificate of occupancy now in force; that an approved sprinkler system shall be maintained throughout the premises in accordance with the rules of the board of standards and appeals; and that the meeting room or place of public assemblage now indicated on the premises shall be discontinued forthwith.

565-25-A.

APPELLANT—William H. Gompert, for Board of Education, City of New York, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—Boynton and Manor avenues, East 172nd street and East 173rd street, The Bronx.

APPEARANCES—

For Appellant: James A. Sheridan and James C. Waldron.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition. CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon 5
Negative 0
Absent 0

THE RESOLUTION:

(565-25-A)

WHEREAS, William H. Gompert, for City of New York, owner, filed, June 1, 1925, an appeal, from an order of the fire commissioner, affecting premises on plot bounded by Boynton and Manor avenues, East 172nd and East 173rd streets, The Bronx; and

WHEREAS, the order of the fire commissioner reads:

"1. Sec. 214 A, Sub Division 4-F of Chapter 10, Code of Ordinances prohibits the storage or use of liquified chlorine in a building occupied as a school." and

WHEREAS, the building is fireproof, five stories in height, 441 ft. by 195 ft. in area; OCCUPIED as a public school, approximately 700 pupils per story; and

WHEREAS, appellant contends that the chlorine gas is limited to 20 pounds; that it is properly operated in the water purifying system of the plunge bath and that all safeguards have been provided; that the liquid chlorine gas is controlled by an automatic machine encased in a gas tight metal cabinet vented to the outer air; that the steel bottle of chlorine gas is submerged in water contained in a steel jacket and that the entire equipment is located in a pump room in the basement of the premises.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that the quantity of chlorine stored on premises shall be restricted to one 20-pound cylinder, said cylinder to be submerged in water in a metal reservoir of not less than 55 gallon capacity, equipped with a trip releasing valve on water supply line; said reservoir shall be enclosed in a 4 in. terra cotta partition with not more than one opening thereto, equipped with rabbeted door; and that the enclosure shall be vented direct to the outer air by a duct of not less than 24 sq. in., protected with a mesh or register at both intake and outlet.

THE RESOLUTION:

(1250-24-BZ)

WHEREAS, Crocker National Fire Prevention Engineering Co., for Anna M. Fischetti, owner, filed, October 21, 1924, an application, under the building zone resolution, to permit in a residence district the maintenance of a garage for the storage of five (5) motor vehicles, four (4) spaces rented to persons not residing on the premises; premises 87 Clermont avenue (rear), Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 6, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Clermont avenue is in a residence district; that Park avenue is in a business district, and that Vanderbilt avenue is in a residence district; and

WHEREAS, the order of the fire department, dated May 7, 1925, reads:

"Maintenance of your garage is a violation of Section 3 of Art. 2 of the Building Zone Resolution of the Board of Estimate and Apportionment of the City of New York, adopted July 25, 1916, inasmuch as motor vehicles stored are for sale, for rent, for hire or are subject to charges for storage. * * *"

"In addition, the driving of an automobile through a tenement house in order to reach a garage in rear of said tenement house lot is a violation of Sec. 154, Ch. 10, Code of Ordinances, which prohibits the use of a building occupied as a dwelling by more than two families for garage purposes.";

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 50 ft. and a depth of 25 ft.; occupied as a garage for the

MINUTES

storage of five (5) motor vehicles, four (4) spaces rented to persons not residing on the premises; and

WHEREAS, the board deemed that applicant failed to establish his basis of appeal in substantiation of hardship, under section 21 of the building zone resolution.

Resolved, that the order of the fire commissioner be and the same hereby is *affirmed*, and the application be and it hereby is *denied*.

97-25-BZ.

APPLICANT—Robert Kaplan, for Ros-Sil Realty Corporation, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business and "B" area district the maintenance of a rear yard less in depth than that required by the building zone resolution.

PREMISES AFFECTED—13 West 36th street, Manhattan.

APPEARANCES—

THE RESOLUTION:

(97-25-BZ)

WHEREAS, Robert Kaplan, for Ros-Sil Realty Corporation, owner, filed, January 23, 1925, an application, under the building zone resolution, to permit in a business and "B" area district the maintenance of a rear yard less in depth than that required by the zone resolution; premises 13 West 36th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 6, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the district maps accompanying the building zone resolution show that West 36th street, West 37th street and Fifth avenue are in a "B" area and business use district; and

WHEREAS, the decision of the superintendent of buildings, rendered October 2, 1924, reads:

"2. Rear yard is of unlawful width. Building Zone, Sec. 12.";

and

WHEREAS, the existing building is of fireproof construction, eight stories in height, with a frontage of 24 ft. and a depth of 89 ft. 9 in.; occupied as offices and showrooms; the rear yard above the 7th story being 10 ft. in depth, similar to depth of yard below instead of the depth required by the building zone resolution; and

WHEREAS, the board deemed it would be a hardship to deny the application and that to require technical compliance would be in contradiction of "reasonable consideration."

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the area district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the structure shall not exceed 88 ft. in height above street grade; that a rear yard of not less than 10 ft. in depth throughout the entire width of the premises shall be maintained; and that the requirements of the building zone resolution shall be complied with in all other respects.

THE RESOLUTION:

(484-25-BZ)

WHEREAS, William F. Doyle, for Helen Peleyger, owner, filed, May 8, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 836-846 Crown street Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 6, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Crown street is in a residence district; Ford street has not been zoned, and East New York avenue is in a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered April 21, 1925, reads:

"Proposition contrary to Zone Resolution, Art. 2, Sec. 3.

"The erection of a public garage for more than five motor vehicles in a residential district.";

and

WHEREAS, the proposed building is of non-fireproof construction, two stories in height, with a frontage of 102 ft. and a depth of 119 ft. 7½ in. and 139 ft. 8⅝ in., irregular; to be occupied as a garage for the storage of more than five (5) motor vehicles; and

WHEREAS, the board deemed that applicant failed to establish his basis of appeal, hardship, under section 21 of the building zone resolution, and there was vigorous and substantial opposition to the granting of the application on the part of affected property owners.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and that the application be and it hereby is *denied*.

MINUTES

THE RESOLUTION:

(269-25-BZ)

WHEREAS, William A. Gieser, for Agnes Connolly, owner, filed, March 10, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a garage for the storage of five (5) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises; premises 2805 Pond place, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 6, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Pond place is in a residence district; East 198th street is in a business district, and Bainbridge avenue is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered July 18, 1924, reads:

"1—Erection of a garage in a residential district for non-accessory use in a residential zone is contrary to the Zone Resolution."

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 45 ft. and a depth of 19 ft.; to be occupied as a garage for the storage of five (5) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises; and

WHEREAS, applicant supported his basis of appeal under section 7-g of the building zone resolution by the filing of 86.6 per cent of consents of affected property owners, and the board deemed that the granting of the application with restrictive conditions and safeguards with respect to adjacent properties supports a reasonable adjustment or variation of the zone resolution as to use area.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the garage shall be limited to a one-story structure; that the rear and gable walls shall be unpierced throughout their entire height and length; that there shall be no gasoline storage equipment installed on the premises; that no signs or advertising display shall be erected or maintained; that the capacity of the garage shall be limited to four automobiles of the pleasure car type, space for three of which may be rented to persons not residing on the premises; and that all permits necessary for the prosecution of the work shall be obtained within ninety days and the building completed within six months from the date of this action.

THE RESOLUTION:

(594-25-BZ)

WHEREAS, John J. Dunnigan, for Region Construction Company, owner, filed, June 10, 1925, an application, under the building zone resolution, to permit the extension from an unrestricted district into a business district of a proposed garage for the storage of more than five motor vehicles; premises west side of Third avenue, 270 ft. south of East 183rd street, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 6, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Third avenue is in an unrestricted district, and Bathgate avenue is in a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 25, 1925, reads:

"Erection of proposed garage for storage of more than five (5) motor vehicles in unrestricted district extending into a business district is contrary to the provisions of Building Zone Resolution."

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 45 ft. and a depth of 138.6 ft.; to be occupied as garage for the storage of more than five motor vehicles; the rear of the building extending into the business district a distance of 19.3 ft.; and

WHEREAS, the board deemed that applicant established his basis of appeal under section 7-b of the building zone resolution and that the instance application is but an adjustment implied by the provisions of exceptions, the major portion of the lot being in an unrestricted district.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution and that the application be and it hereby is *granted on condition* that the building be restricted to a one-story structure in height above grade; that the rear and gable walls shall be unpierced throughout their entire height and length; that any gasoline storage equipment installed shall be located at the street front; that the front elevation shall be finished with face brick and architectural terra cotta or stone trimmings; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within 18 months from the date of this action.

MINUTES

resolution, to permit the extension from an unrestricted district into a business district, of a proposed garage for the storage of more than five motor vehicles; premises west side Third avenue, 80.74 ft. south of East 182nd street, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 6, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Third avenue is in an unrestricted district, and Bathgate avenue is in a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered August 7, 1925, reads:

"Erection of proposed garage in unrestricted district, extending into a business district is contrary to provisions of Building Zone Resolution."

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 60.55 ft. and a depth of 200 ft.; to be occupied as a garage for the storage of more than five motor vehicles; the rear of proposed building extending into the business district a distance of 81 ft.; and

WHEREAS, the board deemed that to grant the appeal for a total depth not exceeding 150 ft. would be a reasonable application of the provisions of exemption under section 7-c, more than two-thirds of plot being in an unrestricted use district, and 21 of the building zone resolution, providing substantial and protective safeguards for adjoining property.

Resolved, that the board of standards and appeals does hereby *make a variation* of the application of the use district regulations of the building zone resolution and that the application be and it hereby is *granted on condition* that the proposed structure shall not exceed a depth of 150 ft. from Third avenue building line; that the rear and gable walls shall be unpierced throughout their entire height and length; that any skylights installed shall be glazed with plain glass, equipped with wire guards above and below; that the front elevation shall be finished in face brick, with architectural terra cotta or stone trimmings; that any gasoline storage equipment installed shall be located at the extreme front of the building; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

THE RESOLUTION:

(876-21-BZ)

WHEREAS, Margaret McDermott, owner, filed, April 18, 1921, an application, under the building zone resolution, to permit in a residence district the maintenance of a garage occupied by one business car; premises 1104 University avenue, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, October 18, 1924, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that University avenue (Lind avenue), 165th street and Summit avenue are residence districts; and

WHEREAS, the order of the fire commissioner, dated March 9, 1921, Order No. 4895-C, reads:

"1. Discontinue the maintenance of garage which is not maintained strictly as an accessory to a dwelling on the same lot and in which is kept motor vehicles that are used for business purposes on these premises."

and

WHEREAS, the building is one story in height, with a frontage of 20 ft. and a depth of 10 ft., occupied as a garage for one car used by the owner of the premises in her business; and

WHEREAS, the applicant has amended her application and appeals under the provisions of section 7, subdiv. F of the building zone resolution; and

WHEREAS, this application was granted by the board at its meetings, October 18, 1921, and April 29, 1924, for a temporary period of two years and applicant requested an extension of time.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted*, permitting the occupancy of the garage for not more than one business car the property of the owner of the premises, for a temporary period of two years from the expiration of the previous permit, that is October 18, 1925.

141-25-A.

APPELLANT—Runkel Brothers, Inc., lessee.

SUBJECT—Application for extension of permit—appeal from decision of fire commissioner.

PREMISES AFFECTED—445-451 West 30th street, Manhattan.

APPEARANCES—

For Appellant: G. P. Knight.

ACTION OF BOARD—Appeal reopened—granted a 90-day extension.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon 1

THE RESOLUTION:

(141-25-A)

WHEREAS, Runkel Brothers, Inc., lessee (Ernest D. Fieux, secretary), filed, February 2, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 445-451 West 30th street, Manhattan; and

WHEREAS, the decision of the fire commissioner reads:

"Burners must be of a type approved by the Board of Standards and Appeals;"

and

WHEREAS, the building is fireproof, ten (10) stories in height, 100 ft. by 197 ft. 6 in. in area; OCCUPIED as a factory and office building; and

WHEREAS, a fuel oil burning system has been installed consisting of a 13,700 gallon and also a 16,600 gallon fuel

oil tank, a "Petro" burner and the necessary pumps, valves, piping, etc., to make a complete installation; and

WHEREAS, appellant contends that the installation conforms with the fuel oil rules excepting that the burner is not an approved burner; and that the burner has been submitted to the board for approval; and requests a temporary permit, pending the approval of the burner; and

WHEREAS, this appeal was granted by the board of appeals for a temporary period of ninety days, May 5, 1925, and appellant requests a continuation of the permit.

Resolved, that the decision of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, for a temporary period of ninety days, at owner's risk, on condition that the installation shall comply with the fuel oil rules in all other respects.

1536-22-A.

APPELLANT—Stephen Jerry & Co., Inc.

SUBJECT—Application for extension of permit—appeal from order of fire commissioner.

PREMISES AFFECTED—272 Huron street, Brooklyn.

APPEARANCES—

For Appellant: Ernest K. Walker.

For Administration: None.

ACTION OF BOARD—Appeal reopened—granted extension for two years from February 23, 1925.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND EXTEND PERMIT—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon 1

THE RESOLUTION:

(1536-22-A)

WHEREAS, Stephen Jerry, owner, filed, December 19, 1922, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 272 Huron street, Brooklyn; and

WHEREAS, the order of the fire commissioner reads:

"With reference to your application, dated July 6, 1922, for a permit to store empty wooden barrels at the above location, I regret to inform you that I am without power to grant such a permit for the reason that subdiv. 2-A of section 25, ch. 12, code of ordinances, provides that no permit shall be issued for the storage of empty wooden packing boxes, cases or barrels in any building or structure, the walls of which are not built of fireproof material except in sparsely populated districts.

"You are therefore, ordered to reduce the quantities of empty wooden barrels stored on the premises to occupy a space not greater than two thousand cubic feet.

"In addition to the above, you are ordered forthwith to:

"1. Post and keep posted conspicuously signs, throughout the entire premises, printed in English and other necessary languages prohibiting smoking, sec. 8, ch. 10, code of ord.

"2. Provide six (6) barrels of water with four (4) water buckets in each barrel: said barrels to be remote from each other and within easy access in case of fire, sec. 25, ch. 12, code of ordinances.";

and

WHEREAS, the building is non-fireproof, corrugated iron, one story in height, 112 ft. 8 in. by 200 ft. in area; occupied for the storage and assembling of cooperage stock, 10 persons; and

WHEREAS, appellant contends that the building is separated from adjoining buildings by streets and an open lot and that practically all the adjoining property is vacant; and

WHEREAS, this appeal was granted by the board of appeals at its meeting February 20, 1923, for a temporary

MINUTES

period of two years, and appellant requests an extension of time.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a period of two years from February 20, 1925, on condition that appellant post and keep posted signs prohibiting smoking, and maintain six barrels of water with four buckets to each barrel, each barrel to be remote from the other and easily accessible.

BUILDING ZONE CASES.

640-25-BZ.

APPLICANT—Shampan & Shampan, for Kap Realty Company, Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a 1½ times height district the erection of the street wall of a building to a height in excess of the limitation imposed by the building zone resolution.

PREMISES AFFECTED—553-555 Eighth avenue and 304 West 38th street, Manhattan.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: None.

ACTION OF BOARD—Application laid over to October 20, 1925, at 2 p. m.

270-25-BZ.

APPLICANT—John J. Dunnigan, for Schinasi Commercial Corp., owners.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district and also within 200 feet of a hospital the use of an

existing building as a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—32-36 West 100th street, Manhattan.

APPEARANCES—

For Applicant: John J. Dunnigan and Frederick J. Flynn.

For Opposition: Lester M. Rosenblum, Paul Browning, Mrs. Strunsky, Mrs. Roth, Mr. Landes and others.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Chairman Walsh, Commissioners Connell and Flanagan 3

Negative: Commissioner Guilfoyle and Fire Chief Kenlon 2

Absent 0

THE RESOLUTION:

(270-25-BZ)

WHEREAS, John J. Dunnigan, for Schinasi Commercial Corporation, owner, filed, March 10, 1925, an application, under the building zone resolution, to permit in a business district and also within 200 ft. of a hospital, the use of an existing building as a garage for the storage of more than five motor vehicles; premises 32-36 West 100th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 6, 1924, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 100th street and Columbus avenue are in business districts and Central Park West is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered February 20, 1925, reads:

"Sec. 4, Article 2 of the Building Zone Resolution, prohibits a public garage for more than five cars in a business district. Sec. 20, Article 5, also prohibits a garage within 200 ft. of a hospital. There is a hospital at the southwest corner of Central Park West and 100th St., which is within 200 ft. of the proposed garage."

and

WHEREAS, the existing building is of fireproof construction, three and seven stories in height, with a frontage of 75 ft. and a depth of 100.11 ft.; to be occupied as a garage for the storage of more than five (5) motor vehicles; and

WHEREAS, there was opposition to the granting of this application on the part of adjoining property owners, and the board deemed there was no facts submitted in substantiation or support of hardship under section 21.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

497-25-BZ.

APPLICANT—John W. Clancy, for Sally B. Crane, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

THE RESOLUTION:

(497-25-BZ)

WHEREAS, John W. Clancy, for Sally B. Crane, owner, filed, May 12, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 2180-2182 Folin street, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 6, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Folin street is in a business district, East 181st street is in a business district and Tiebout avenue is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered April 22, 1925, reads:

"Erection of proposed garage for storage of more than five motor vehicles in business district is contrary to provisions of Building Zone Resolution."

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 126.37 ft. and a depth of 143 ft. and 160 ft., irregular; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed that the basis of appeal is substantially established, and that adjoining properties will not be adversely affected.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building shall be restricted to a one-story structure above grade; that the front elevation shall be finished with face brick, architectural terra cotta or stone trimmings; that the rear and gable walls shall be unpierced throughout their entire height and length; that there shall be no skylight within 25 ft. of the southerly gable wall; that there shall be no roof signs erected or no advertising display, other than one projecting sign on the front of the building, indicating the title of the garage; that any gasoline storage equipment installed shall be located at the extreme northerly end of the structure on the Folin street front;

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

1502-24-BZ.

APPLICANT—William F. Doyle, for Morris Pomerantz, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

THE RESOLUTION:

(1502-24-BZ)

WHEREAS, William F. Doyle, for Morris Pomerantz, owner, filed, December 22, 1924, an application, under the building zone resolution, to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises east side of New York avenue, 185.92 ft. north of South street, Jamaica, Queens; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 6, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that New York avenue is in a business district; that Evergreen street is in an unrestricted district and South street is in both an unrestricted district and a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered December 9, 1924, reads:

"1. Erection of garage in business district is prohibited by zone law."

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 172 ft. and a depth of 125 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed, due to the surrounding conditions, that the property is not suited for any other purpose; and in view of the general consents filed of practically both sides of the street fronts.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building shall be restricted to a one-story structure above grade; that the rear and gable walls shall be unpierced throughout their entire height and length; that the front of the building, for a depth of 15 ft., shall be reserved for store, office or accessory uses; that the front elevation, other than the plate glass show windows, shall be finished with face brick, architectural terra cotta or stone trimmings; that no roof signs shall be erected;

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

286-25-BZ.

APPLICANT—William B. Seaver, for Third Avenue Railway Company, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—2526-2530 Amsterdam avenue, Manhattan.

APPEARANCES—

THE RESOLUTION:

(286-25-BZ)

WHEREAS, William B. Seaver, for Third Avenue Railway Company, Leslie Sutherland, vice-president, owner, filed, March 12, 1925, an application, under the building zone res-

MINUTES

olution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 2526-2530 Amsterdam avenue, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 6, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Amsterdam avenue is in a business district; that 185th street is in a residence district, and that 186th street is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered March 12, 1925, reads:

"1. A garage for the use of more than five cars in a business district is contrary to Section 4 of the Building Zone Resolution."

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 165 ft. 6 in. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, there was opposition to the granting of this application on the part of the neighboring property owners and the board deemed that as the west side of Amsterdam avenue north of 181st street is as yet uninvaded by non-conforming uses, especially extensive public garages, that it would be destructive of even reasonable protection intended by the zoning resolution and wholly unwarranted by surrounding circumstances and conditions.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

289-25-BZ.

APPLICANT—William F. Doyle, for Max Zaubler, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a business district and partly in a residence district the erection and maintenance of an extension to an existing garage for the storage of more than five (5) motor vehicles.

THE RESOLUTION:

(289-25-BZ)

WHEREAS, William F. Doyle, for Max Zaubler, owner, filed, March 13, 1925, an application, under the building zone resolution, to permit partly in a business district and partly in a residence district, the erection and maintenance of an extension to an existing garage for the storage of more than five (5) motor vehicles; premises 553-59 11th street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 6, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that 11th street is a residence

district, that Eighth avenue is a business district and Tenth avenue is a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered March 2, 1925, in acting on Alt. App. No. 2566-25, reads:

"Proposition contrary to the Zone Resolution, Art. 2, Sec. 3 and Sec. 4.

"The extension of a public garage for more than five motor vehicles partly in a residential and partly in a business district."

and

WHEREAS, the existing building is of non-fireproof construction, two stories in height, with a frontage of 45 ft. and a depth of 100 ft.; to be occupied as an extension to an existing garage for the storage of more than five (5) motor vehicles; and

WHEREAS, the board deemed that the basis of appeal has been established and is within the purview of reasonable adjustment provided for under rules of exception and in view of the surrounding and abutting conditions and non-conforming use.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building shall be restricted to a two (2) story structure above grade; that the proposed extension shall not exceed a depth of 84 ft. from building line; that the rear and gable walls within the residence area shall be unpierced throughout their entire height and length; that any existing windows in the rear wall of the present structure shall be equipped with fixed steel sash, glazed with translucent wire glass; that there shall be no motor vehicle repair shop conducted or permitted on the premises; that any gasoline storage equipment installed shall be located at the extreme front of the building at the west side; that the front elevation shall be finished with face brick, architectural terra cotta or stone trimmings; that no signs or advertising display of any nature or description shall be erected on the front of the building within the residence use area, or on the roof;

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

458-25-BZ.

APPLICANT—William F. Doyle, on behalf of William Kolle, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—198-210 16th street, Brooklyn.

APPEARANCES—

THE RESOLUTION:

(458-25-BZ)

WHEREAS, William F. Doyle, for William Kolle, owner, filed, April 29, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 198-210 16th street, Brooklyn; and

MINUTES

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 6, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that 16th street, Prospect avenue and Fifth avenue are all in business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered May 5, 1925, reads:

"Public garage for more than five cars prohibited in a business district. Contrary to Zone Resolution, Art. 2, Sec. 4 (15) application of above is therefore denied."

and
WHEREAS, the proposed building is of non-fireproof construction, two stories in height, with a frontage of 144 ft. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed the basis of appeal was established, and the circumstances warranted a reasonable adjustment with protective and restrictive safeguards.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building shall not exceed a two (2) story structure above grade and that the rear and gable walls shall be unpierced throughout their entire height and length, except such windows that open into the yard within the property on the same lot; that the front elevation shall be finished with face brick and architectural terra cotta and stone trimmings; that any gasoline storage equipment installed shall be located at the extreme front of the building at the street wall; and that a return of the proposed design of the front elevation shall be submitted to this board for approval;

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

1362-22-BZ.

APPLICANT—Mrs. Rosalie Guggenheim.

SUBJECT—Application for extension of permit (re: order of fire commissioner) to permit in a residence district the maintenance of a garage for the storage of three (3) motor vehicles, three (3) spaces rented to persons not residing on premises.

PREMISES AFFECTED—284 Stuyvesant avenue, Brooklyn.

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(1362-22-BZ)

WHEREAS, Croker National Fire Prev. Eng. Co., for Otto Guggenheim, owner, filed, November 14, 1922, an application, under the building zone resolution, to permit in a residence district the maintenance of a garage for the storage of three (3) motor vehicles; three (3) spaces rented to persons not residing on the premises; premises 284 Stuyvesant avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting March 6,

1923, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Jefferson avenue, Stuyvesant avenue and Hancock street are residence districts; and

WHEREAS, the order of the fire commissioner, dated October 27, 1922, Order No. 75394-LC, reads:

"Maintenance of your garage is a violation of section 3, article 2, of the Building Zone Resolution, of the Board of Estimate and Apportionment of the City of New York, adopted July 25, 1916, inasmuch as motor vehicles stored are for sale, for rent, or for hire, or are subject to charges for storage.

"You are, therefore, ordered to remove all motor vehicles stored by others than the occupants of dwelling on lot where garage is situated."

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 32 ft. 7 in. and a depth of 16 ft. 8 in.; occupied as a garage for the storage of three automobiles of the pleasure car type, space rented to persons not residing on the premises; and

WHEREAS, applicant has filed the duly acknowledged consents of the owners of 88.8 per cent of the property frontage deemed by the board to be affected; and

WHEREAS, this application was granted by the board at its meeting, March 6, 1923, and May 29, 1923, on certain conditions and owner requested a modification of the conditions.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application for modification of the original resolution, in view of the consents filed at the time of the public hearing, be and it hereby is *granted*, to permit the hiring of space for three automobiles of the pleasure-car type, for a period of two years from May 29, 1925.

EDWARD V. BARTON, Acting Secretary.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, October 23, at 2:30 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rule 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc. of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

- (a) For Standard one-half (½) inch heads—
 - 8 feet in 12 foot bays;
 - 9 feet in 11 foot bays;
 - 10 feet in 10 foot bays;
 - 11 feet in 9 foot bays;
 - 12 feet in 5 to 8 foot bays;

- (b) For Conran* one (1) inch heads—
 - 20 feet in 5 to 12 foot bays.

- (c) For Conran* one and one-quarter (1¼) inch heads—
 - 25 feet in 5 to 12 foot bays.

- (d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof. may be used in lieu of heads located in peak of roof.

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 "	2 heads
$1\frac{1}{4}$ "	3 "
$1\frac{1}{2}$ "	5 "
2 "	10 "
$2\frac{1}{2}$ "	20 "
3 "	36 "
$3\frac{1}{2}$ "	55 "
4 "	80 "
5 "	140 "
6 "	200 "
7 "	300 "
8 "	420 "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ "	2 heads
$1\frac{1}{2}$ "	3 "
2 "	4 "
$2\frac{1}{2}$ "	6 "
3 "	9 "
4 "	18 "
5 "	34 "
6 "	51 "
7 "	75 "
8 "	105 "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ "	2 heads
2 "	3 "
$2\frac{1}{2}$ "	4 "
3 "	6 "
4 "	12 "
5 "	21 "
6 "	40 "
7 "	60 "
8 "	84 "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use, and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, stuffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads.128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor.].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased *or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.*

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employes instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before the board—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of the board, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of the board is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

BOARD OF STANDARDS AND APPEALS,

BOARD OF STANDARDS AND APPEALS

WILLIAM E. WALSH, Chairman

Commissioners

HENRY L. CONNELL

JOSEPH FLANAGAN

JOHN GUILFOYLE

FIRE CHIEF JOHN KENLON

JAMES O'CONNOR, Secretary

EDWARD V. BARTON, Chief Clerk

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board

CONTENTS

This issue of the Bulletin contains, in the order given—

Docket.

Call of Clerk's Calendar.

The Trial Calendar.

Notices in Building Zone Cases.

Special Notice.

Minutes of Special Meeting, October 9, 1925, at 10 a. m.

Minutes of Meeting, October 13, 1925, at 10 a. m.

Minutes of Meeting, October 13, 1925, at 2 p. m.

Rules.

Notice of Public Hearing.

Progress Report.

PUBLIC HEARINGS

Tuesdays, at 10 a. m. and 2:30 p. m.

Special meetings as published in this Bulletin.

Call of Clerk's Calendar, Tuesdays, at 2 p. m.

All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of the board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The *Clerk's Calendar* consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, October 20, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, October 27, 1925, at 2 o'clock.

The *Clerk's Calendar* is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

CALL OF CLERK'S CALENDAR. BUILDING ZONE CASES.

Tuesday, October 20, 1925, at 2 p. m.

669-25-BZ—Jacob Zwerling, lessee.
PREMISES—Northwest corner of Belmont avenue and
Fordham road, The Bronx.
TO PERMIT in a business district the erection and main-
tenance of a gasoline selling station.
724-25-BZ.
APPLICANT—William F. Doyle, for Celia Aronofsky,
owner.
PREMISES—1515 Bryant avenue, The Bronx.
TO PERMIT in a residence district the change of occu-

pancy of an existing building from private garage
to store.

552-25-BZ.

APPLICANT—Philip J. Sinnott, for Fieldstone Garage
Inc., owner.

PREMISES—East side Broadway, 223 ft. 8 in. north of
West 231st street, The Bronx.

TO PERMIT in a business district the erection and main-
tenance of a garage for the storage of more than
five (5) motor vehicles, and also to permit same
to be of non-fireproof construction (garage, with
one street frontage, exceeding 7,500 square feet in
area).

598-25-BZ.

APPLICANT—John J. Dunnigan, for Daniel Houlihan
owner.

PREMISES—2974 Jerome avenue, The Bronx.
TO PERMIT in a business district the erection and main-
tenance of a garage for the storage of more than
five (5) motor vehicles.

BOARD OF STANDARDS AND APPEALS

APPEALS FROM ADMINISTRATIVE ORDERS.

Tuesday, October 20, 1925, at 10 a. m.

589-25-A—65 Skillman avenue, Brooklyn.
590-25-A—72-78 Spring street, Manhattan.

BUILDING ZONE APPLICATIONS.

NOTICE IS HEREBY GIVEN by the board of stand-
ards and appeals of a public hearing under the provisions
of the building zone resolution, *Tuesday morning, October*
20, 1925, at 10 o'clock, in Room 1013, Municipal Building,
on the following matters:

CAL. NO. 638-23-BZ—Application, September 8, 1925, under
the building zone resolution, of Samuel
Rosenblum, architect, on behalf of Max
Notess, owner, to permit in a residence
district the maintenance of a garage
for the storage of three (3) pleasure
motor vehicles, two (2) spaces rented
to persons not residing on the premises
(previously dismissed for lack of pros-
ecution); premises 2965 Valentine
avenue, The Bronx.

CAL. NO. 608-25-BZ—Application, June 11, 1925, under the
building zone resolution, of McCooey
and Conroy, applicants, on behalf of
Lowlou Corporation, owner, to permit
partly in a business district and partly
in a residence district the erection and
maintenance of a garage for the stor-
age of more than five (5) motor ve-
hicles; premises 1095-1117 Washington
avenue, southeast corner of Sterling
street, Brooklyn.

CALENDAR

CAL. NO. 622-25-BZ—Application, June 16, 1925, under the building zone resolution, of Edward P. Doyle, applicant, on behalf of Simon Brown, owner, to permit in a residence district the change of occupancy of a building used as a residence to a business use on the 1st story; premises 131 Starr street, Brooklyn.

CAL. NO. 1523-24-BZ—Application, December 27, 1924, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of Christine Bottenus, owner, to permit in a residence district the maintenance of a garage for the storage of four (4) pleasure motor vehicles, four (4) spaces rented to persons not residing on the premises; premises 1665 Davidson avenue, The Bronx.

763-25-SA—Milwaukee Piston Rotating Port Pump, Type No. 705, approval of.
638-25-SA—American March Duplex Fuel Oil Pump, approval of.
639-25-SA—Marsh Simplex Fuel Oil Pump, approval of.
729-25-SA—The Hauck Vention Low Pressure Oil Burner, approval of.

SPECIAL NOTICE

The meeting scheduled for October 9, 1925, at 2 p. m. has been laid over to Tuesday, November 10, 1925, at 2:30 p. m.

CONCRETE RULES

USE OF HYDRATED LIME IN CONCRETE.

Adopted by the Board of Standards and Appeals, April 19, 1920, under Cal. No. 153-20-S.

The use of hydrated lime in all classes of concrete construction shall not be prohibited when used in accordance with the conditions hereinafter set forth.

The hydrated lime shall conform with the standard specifications for this material which have been adopted by the American Society for Testing Materials.

The maximum amount of hydrated lime which may be used shall conform with the following table, all weights given being the amount of lime which may be incorporated for each ninety-five pound bag of Portland cement.

1-1½-3 Mix, 4 pounds of hydrated lime per bag of cement.

1-2-4 Mix, 5 pounds of hydrated lime per bag of cement.

1-2½-5 Mix, 6 pounds of hydrated lime per bag of cement.

For hand mixed concrete, the hydrated lime and Portland cement shall be well mixed while dry.

Hydrated lime shall not be used in concrete which is to be deposited under water.

MINUTES

BOARD OF STANDARDS AND APPEALS

SPECIAL MEETING.

FRIDAY MORNING, OCTOBER 9, 1925.

Present: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon.

APPEALS FROM ADMINISTRATIVE ORDERS.

764-25-A.

APPELLANT—George Keister, for Earl Carroll Realty Corp., owner.

SUBJECT—Appeal from decision of superintendent of buildings.

PREMISES AFFECTED—158-166 West 50th street and 753-759 Seventh avenue, Manhattan.

APPEARANCES—

For Appellant: James J. Munro.

ACTION OF BOARD—Appeal laid over to November 17, 1925, at 10 a. m., on request.

589-25-A.

APPELLANT—Nathaniel Seaman, for Corona Chemical Co., Inc., lessee.

SUBJECT—Application for reopening; appeal from order of fire commissioner.

PREMISES AFFECTED—43-45 Wooster street, Manhattan.

APPEARANCES—None.

ACTION OF BOARD—Appeal reopened; to be set for calendar call and hearing.

THE VOTE TO REOPEN—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.....	4
Negative	0
Absent: Fire Chief Kenlon	1

185-25-A.

APPELLANT—National Button Works, lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—147-153 Waverly place, Manhattan.

APPEARANCES—None.

ACTION OF BOARD—Chairman read request to withdraw. Appeal withdrawn.

THE VOTE TO WITHDRAW—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.....	4
Negative	0
Absent: Fire Chief Kenlon	1

64-25-A.

APPELLANT—Kollmorgen Optical Corp., lessee.

SUBJECT—Appeal from orders of fire commissioner.

PREMISES AFFECTED—35 Steuben street, Brooklyn.

APPEARANCES—None.

ACTION OF BOARD—Chairman read request to withdraw. Appeal withdrawn.

THE VOTE TO WITHDRAW—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.....	4
Negative	0
Absent: Fire Chief Kenlon	1

554-25-A.

APPELLANT—The United States Printing & Lithograph Company, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—83-101 North Third street and 209-219 Wythe avenue, Brooklyn.

APPEARANCES—

For Appellant: M. W. Ehrich.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal withdrawn.

THE VOTE TO WITHDRAW—

Affirmative: Chairman Walsh, Commissioners Connell and Guilfoyle and Fire Chief Kenlon

Negative

Absent: Commissioner Flanagan

556-25-A.

APPELLANT—Samuel Rosenblum, for Shoreham Mfg. Co., owner of 100 ft. east of Fisk avenue and lessee of the balance.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—51 Henry street, northeast corner of Fisk avenue, Winfield, Queens.

APPEARANCES—

For Appellant: Samuel Rosenblum and F. Nueske

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal withdrawn.

THE VOTE TO WITHDRAW—

Affirmative: Chairman Walsh, Commissioners Connell and Guilfoyle and Fire Chief Kenlon

Negative

Absent: Commissioner Flanagan

318-25-A.

APPELLANT—Emil Guterman, for Highway Improvement & Repair Co., owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—East side of Newtown Creek 586.63 ft. north of Grand street, Maspeth, Borough of Queens.

APPEARANCES—

For Appellant: Emil Guterman.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell and Guilfoyle and Fire Chief Kenlon

Negative

Absent: Commissioner Flanagan

THE RESOLUTION:

(318-25-A)

WHEREAS, Emil Guterman, for Highway Improvement & Repair Co., owner, filed, March 25, 1925, an appeal from a decision of the fire commissioner, affecting premises east side Newtown Creek, 586.63 ft. north of Grand street, Maspeth, Queens; and

WHEREAS, the decision of the fire commissioner, dated March 25, 1925, reads:

"2. Asphalt storage tanks must be buried so that the tops thereof shall be at least two feet below grade level.

"4. Note on plan that storage tank will be equipped with a fire extinguishing system satisfactory to the fire commissioner and that direct telegraphic communication with fire headquarters will be established as per Article No. 8, Section 111, subdivision No. 5, Code of Ordinances."

and

WHEREAS, the premises consist of a group of one-story structures, surrounding a 60,000-gallon steel tank, size of plot about 275 ft. and 380 ft. irregular in depth, with 200 ft. frontage on Newtown Creek; OCCUPIED for the storage of supplies used for the repair of streets and highways, i. e., asphalt, sand, etc.; and

WHEREAS, appellant proposes to build a dike wall around tank to withhold contents in case of rupture; to install two (2) approved yard hydrants (4-in.) with 2½-in. hose, to cover entire plant; also to provide direct telegraphic communication with fire department headquarters; and

MINUTES

WHEREAS, the appellant claims the tank is located above ground, remote from any building other than those used directly in connection with the plant; that the asphalt stored has a flash point of 510 degrees; that it would be an unnecessary hardship to compel the owner to bury the tank due to the nature of the soil and being adjacent to the creek; he requests the board to permit the use of tank for the storage of asphalt, provided the proposed improvements are made as noted above.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the use of tanks shall be restricted to asphalt storage and shall be enclosed with a concrete wall; providing a reservoir equal to the capacity of the tanks and that sufficient yard hydrants shall be provided, equipped with 2½-in. hose to cover the premises at all points.

445-25-A.
APPELLANT—Maryland Hotel Corporation, lessee.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—104-106 West 49th street, Manhattan.

APPEARANCES—

For Appellant: Arthur V. Kaldenberg.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell and Guilfoyle and Fire Chief Kenlon 4
Negative 0
Absent: Commissioner Flanagan 1

THE RESOLUTION:

(445-25-A)

WHEREAS, Maryland Hotel Corporation, lessee, filed, April 25, 1925, an appeal from an order of the fire commissioner affecting premises 104-106 West 49th street, Manhattan; and

WHEREAS, the order of the fire commissioner reads:

"1. Install an adequate interior electric fire alarm system in accordance with the attached approved layout. Sec. 21, Ch. 12, Code of Ordinances.";

and

WHEREAS, the building is non-fireproof, 9 stories and pent house in height, 40 ft. by 90 ft. in area; OCCUPIED as a hotel, about 12 persons on each floor; and

WHEREAS, the appellant claims the building is provided with standpipes; adequate exit facilities; that there are four (4) city hydrants within 150 feet of the hotel; that a fire alarm known as the Electric Gong System was installed before the adoption of the Fire Alarm Rules in 1917 by the board of standards and appeals; that the said system now installed is in perfect working order, and due to the efficiency of the system, it would impose great hardship and needless expense to compel the owner to comply with the fire department order No. 74474-F; and

WHEREAS, appellant claims there is no kitchen or dining room on the premises; and

WHEREAS, appellant contends that the present fire alarm system was installed and approved by the fire department prior to 1918.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted* for a temporary period not exceeding one year from this date, *on condition* that the existing alarm system shall be maintained in perfect working order; that the requirements of the rules as to the periodical tests shall be complied with in all respects and that a daily inspection and test shall be made by the owners or operators of premises; that a record of such inspection and test shall be signed by an executive officer of the corporation and maintained in office subject to examination and inspection by any authorized representative of the fire department, and *granted* only so long as conditions as to present occupancy and use remain unchanged.

483-25-A.

APPELLANT—Mallery Fuelgas Corporation, for New York University, owner.

SUBJECT—Appeal from decision of fire commissioner.
PREMISES AFFECTED—West side of University avenue, corner of East 181st street, The Bronx.

APPEARANCES—

For Appellant: H. S. Homer and A. H. Mallery.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell and Guilfoyle and Fire Chief Kenlon 4
Negative 0
Absent: Commissioner Flanagan 1

THE RESOLUTION:

(483-25-A)

WHEREAS, Mallery Fuelgas Corporation, for New York University, owner, filed, May 7, 1925, an appeal, from a decision of the fire commissioner, affecting premises on the west side of University avenue, corner of East 181st street, Borough of The Bronx; and

WHEREAS, the decision of the fire commissioner, rendered April 30, 1925, reads:

"1. Auxiliary fuel oil tanks under pressure contrary to Rule No. 17.";

and

WHEREAS, the building is fireproof, one story in height, 68 ft. by 56 ft. in area; OCCUPIED as a boiler room connected with New York University building, 5 persons employed; EQUIPPED with a fuel oil burning system, using the Mallery Automatic Gas Producer, there being two auxiliary tanks on the control, each tank of 10 gallons capacity, one for regular use and one held in reserve for emergency; and

WHEREAS, it appears that the Mallery Fuelgas Corporation has a petition for the approval of their device (filed as Champion Gas Producer under Cal. No. 1491-23-SA—on for reopening), which has not yet been acted upon by the board, and appellant contends that the installation is made for experimental purposes in conjunction with the School of Engineering.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a temporary period of ninety (90) days for experimental purposes, *on condition* that the installation shall comply substantially with the fuel oil rules now in force in all respects.

517-25-A.

APPELLANT—Intertype Corporation, lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—286-304 Furman street, Brooklyn.

APPEARANCES—

For Appellant: Harry Vigdor and C. E. Hicks.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell and Guilfoyle and Fire Chief Kenlon 4
Negative 0
Absent: Commissioner Flanagan 1

THE RESOLUTION:

(517-25-A)

WHEREAS, Intertype Corp., lessee, filed, May 19, 1925, an appeal, from an order of the fire commissioner, affecting premises 286-304 Furman street, Brooklyn; and

MINUTES

WHEREAS, the order of the fire commissioner reads:

"Install a standpipe system with risers 4 inches in diameter. Sec. 581, Ch. 5, Code of Ordinances."; and

WHEREAS, the building is fireproof, three stories in height, 167 ft. by 80 ft. 5¾ in. and 228 ft. 4¾ in., irregular in depth, about 22,500 sq. ft. of floor area; OCCUPIED as a factory building, manufacturing machines, 50 persons on each story; and

WHEREAS, the appellant claims the building is equipped with a 95 per cent sprinkler system, fed from two gravity tanks, each of 50,000 gallon capacity; a fire pump; that there are three (3) standpipe risers (1¼ in.) connected by tap (2 in.) to Furman street main (20 in.); he further contends that the board of review, after investigating, rescinded a similar standpipe order on November 25, 1919, and he requests the board to relieve him of complying with Order No. 74586-F.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, ratifying the action of the board of review of the fire department under date of November 25, 1919, *on condition* and only so long as present use, occupancy and operation of the business conducted on the premises remain unchanged.

564-25-A.

APPELLANT—Edward P. Doyle, for Bliss Laboratories, lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—106-110 Seventh avenue, Manhattan.

APPEARANCES—

For Appellant: Edward P. Doyle.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell and Guilfoyle and Fire Chief Kenlon	4
Negative	0
Absent: Commissioner Flanagan.....	1

THE RESOLUTION:

(564-25-A)

WHEREAS, Edward P. Doyle, for Bliss Laboratories, lessee, filed, June 1, 1925, an appeal, from an order of the fire commissioner, affecting premises 106-110 Seventh avenue, Manhattan; and

WHEREAS, the order of the fire commissioner reads:

"1. Discontinue the storage of oils (essential oils excepted), fats or greases in an amount exceeding the equivalent of five bbls."; and

WHEREAS, the building is fireproof, twelve stories in height, 20 ft. by 52 ft. in area; OCCUPIED as a tenant factory (mostly printing), approximately 275 persons above the 1st story, appellant occupying the 10th story for the manufacture of toilet preparations, 10 persons; and

WHEREAS, appellant contends that, having occupied the premises for over six years and using the same amount of oils now being requested; that the oils in question which the fire department objects to are mineral oils and not inflammable, having a flash point of 400 degrees F. in an open cup tester and proposes to store on the premises seven (7) 50 gallon drums of oil (only one being in work at any time, the contents being taken out by means of a pump) and also two barrels of vaseline and 300 pounds of bees wax; and further contends that this quantity of material is necessary in order to properly conduct the business; and

WHEREAS, the ordinance would permit the issuance of a permit without variation for five (5) barrels.

Resolved, that the order of the fire commissioner be and

it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that not more than six (6) barrels of mineral oil and one (1) barrel of vaseline shall be maintained or stored on the premises; and that the requirements as to oil storage shall be complied with in all other respects.

150-25-A.

APPELLANT—Croker National Fire Prevention Eng. Co., for Columbia University, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—15-19 Amsterdam avenue, 134-138 West 60th street and 427-437 West 59th street, Manhattan.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell and Guilfoyle and Fire Chief Kenlon	4
Negative	0
Absent: Commissioner Flanagan.....	1

THE RESOLUTION:

(150-25-A)

WHEREAS, Croker National Fire Prevention Engineering Co., for Columbia University, owner, filed, February 4, 1925, an appeal, from an order of the fire commissioner, affecting premises 15-17-19 Amsterdam avenue, 134-68 West 60th street and 427-37 West 59th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated June 26, 1924, reads:

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto."; and

WHEREAS, the building is fireproof, three, four, six and seven stories in height, 174 ft. by 182 ft. 9 in., irregular in area, about 22,100 sq. ft. in total area, divided into four sections on the first, second, third and fourth stories, less than 10,000 sq. ft. area above; OCCUPIED and known as the medical school of Columbia University; and

WHEREAS, the appellant claims the four sections are separated by brick walls with fireproof doors or fireproof shutters at openings, that each section is less than 10,000 sq. ft. in area, except one being 10,045 sq. ft. in area; he proposes to provide approved fire doors to openings on the first, second, third and fourth stories in the dividing brick wall between main areas, so that no area will exceed 10,045 sq. ft.; he further contends that ground has been broken for a new structure which will be completed within the next two years and the building in question will then be vacated; he feels it would be an unnecessary hardship to be forced to install standpipes under the above conditions.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the area and structures as now subdivided shall not be increased; that an approved watchman service shall be maintained; that sufficient fire buckets as directed by the fire department shall be distributed throughout the premises; and that the use and occupancy as hospital on the premises shall be discontinued on or before January 1, 1928.

336-25-A.

APPELLANT—Augustus Schulz, for George J. Schwartz, owner.

MINUTES

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—46 Old Broadway, Manhattan.

APPEARANCES—

For Appellant: Augustus Schulz.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell and Guilfoyle and Fire Chief

Kenlon 4

Negative 0

Absent: Commissioner Flanagan..... 1

THE RESOLUTION:

(336-25-A)

WHEREAS, Augustus Schulz, for George J. Schnatz, owner, filed an appeal, from an order of the fire commissioner, affecting premises 46 Old Broadway, Manhattan; and

WHEREAS, the order of the fire commissioner, dated May 21, 1924, reads:

"Order No. 24211-LC:

"You are hereby notified that an inspection of premises 46 Old Broadway, Manhattan, used as a non-storage garage, shows that the following must be done before permit requested by you can be issued:

"4. Protect ceiling, walls and stairway enclosure of garage with fire retarding material as prescribed by rules of Board of Standards and Appeals * * *";

and

WHEREAS, the building is non-fireproof, three stories in height, 24 ft. 10 in. by 30 ft. 2 in. in area. OCCUPIED: 1st story, garage for one automobile truck and also for the storage of steel and iron; 2nd and 3rd stories, dwellings; the garage portion being separated from the rest of the premises by wood lath and plaster partitions and ceiling; and

WHEREAS, appellant contends that the occupancy is only temporary and that to comply with the orders would be a hardship.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the stairs from the upper portion of the structure shall lead directly to the street, with no opening between stairhall and shop; that the soffits of said stairs on 1st story shall be covered with metal; that not more than one (1) automobile, used in conjunction with the business conducted on the premises, be stored thereon; that no gasoline storage equipment shall be maintained on the premises; and that the present automobile storage shall be discontinued on or before December 31, 1925.

CASES DISMISSED.

Appeals from Administrative Orders.

The chairman called attention to the following cases, where notices of intention to appeal were offered for filing; but where, despite notification from this office, papers have not been completed, thus tying the hands of the administrative official in the performance of his duty:

(68-25-A)

Filed January 16—Premises northeast corner of Schooley place and Beaufort street, Jamaica, Queens. Order of the fire commissioner. Appellant, Dictograph Products Corp. Dismissed for lack of prosecution.

(94-25-A)

Filed January 23—Premises southeast corner of Fourth avenue and 18th street, Whitestone, Queens. Decision of the fire commissioner. Appellant, Croker National Fire Prevention Engineering Co. Dismissed for lack of prosecution.

(213-25-A)

Filed February 24—Premises 305 East 170th street, The Bronx. Order of the fire commissioner. Appellant, G. G. Gottlieb. Dismissed for lack of prosecution.

(214-25-A)

Filed February 24—Premises 307 East 170th street, The Bronx. Order of the fire commissioner. Appellant, G. G. Gottlieb. Dismissed for lack of prosecution.

(215-25-A)

Filed February 24—Premises 309 East 170th street, The Bronx. Order of the fire commissioner. Appellant, G. G. Gottlieb. Dismissed for lack of prosecution.

(216-25-A)

Filed February 24—Premises 313 East 170th street, The Bronx. Order of the fire commissioner. Appellant, G. G. Gottlieb. Dismissed for lack of prosecution.

(217-25-A)

Filed February 24—Premises 317 East 170th street, The Bronx. Order of the fire commissioner. Appellant, G. G. Gottlieb. Dismissed for lack of prosecution.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle... 4

Negative 0

Absent: Fire Chief Kenlon 1

THE RESOLUTION:

WHEREAS, the foregoing appellants have filed with the board of standards and appeals, appeals from orders affecting the premises in question; and

WHEREAS, the appellants have failed to complete their papers, though duly notified to do so.

Resolved, that the foregoing appeals be and they hereby are *dismissed* for lack of prosecution.

422-25-A.

APPELLANT—A. Libelsky, President of Thompson Novelty Button Works, Inc., lessee.

SUBJECT—Request for immediate action; appeal from order of fire commissioner.

PREMISES AFFECTED—151 West 19th street, Manhattan.

APPEARANCES—

For Appellant: Luke Flanagan.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(422-25-A)

WHEREAS, A. Libelsky, president, Thompson Novelty Button Works, Inc., filed, April 20, 1925, an appeal, from an order of the fire commissioner, affecting premises 151 West 19th street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 28824-LC, dated March 28, 1925, reads:

"Item 2. Pressure tank of sprinkler system must be of such size as to properly contain not less than 5,000 gallons of water.

"Item 4. Provide a fireproof vault to keep all nitro cellulose products.";

and

MINUTES

WHEREAS, the building is fireproof, twelve stories in height, 45 ft. by 90 ft. in area on 1st story and 45 ft. by 80 ft. above; OCCUPIED as a tenant factory, with celluloid manufacturing on the 12th floor; and

WHEREAS, the board deemed that relief from the requirements of Item 2 of Order No. 28824-LC would be a reasonable adjustment of this appeal.

Resolved, that the order of the fire commissioner, No. 28824-LC, be and it hereby is *modified*, and the appeal be and it hereby is *granted* as to Item 2 thereof, the pressure tank, and *denied* in all other respects.

BUILDING ZONE CASES.

626-25-BZ.

APPLICANT—New York Telephone Company, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence use, C and E area districts, the extension in height and area of an existing central telephone exchange building.

PREMISES AFFECTED—1421-1437 Ocean avenue and 1060-1068 Kenmore place, Brooklyn.

APPEARANCES—

For Applicant: N. H. Egleston and A. A. Frank.

For Opposition: Herman Strizver, Frank H. Sattenspiel, Philip Bentz, C. M. Nannen and L. A. Sheinart.

THE RESOLUTION:

(85-25-BZ)

WHEREAS, William F. Doyle, for Michael T. Watts, owner, filed, January 21, 1925, an application, under the building zone resolution, to permit partly in a business district and partly in a residence district the maintenance of an open garage parking space for the storage of more than five (5) motor vehicles; premises 332 West 57th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 9, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 57th street is in a business district, that West 56th street is in a residence district and Eighth avenue is in a business district; and

WHEREAS, the order of the fire commissioner, dated January 9, 1925, reads:

"1. Discontinue the storage of motor vehicles the fuel storage tanks of which are not empty in the unenclosed lot at the above address."

and

WHEREAS, the existing space is 75 ft. front on 57th street, 100 ft. front on 56th street and a depth of 200 ft.; to be occupied as an open garage parking space for the storage of more than five (5) motor vehicles; and

WHEREAS, the basis of appeal, section 7-1 of the building zone resolution, does not apply, and there was vigorous opposition on the part of affected property owners to the granting of this application.

Resolved, that the order of the fire commissioner be and it hereby is affirmed, and the application be and it hereby is denied.

THE RESOLUTION:

(402-25-BZ)

WHEREAS, William F. Doyle, for Emma A. Justice, owner, filed, April 14, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises southeast corner of East 182nd street and Folin street, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 9, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that 182nd street and Webster avenue are in the business district; and

WHEREAS, the decision of the superintendent of buildings, rendered April 4, 1925, reads:

"Erection of proposed garage for storage of more than five motor vehicles in business district is contrary to provisions of Building Zone Resolution."

and

WHEREAS, the proposed building is of non-fireproof construction, two stories in height, with a frontage of 37.95 ft. and a depth of 122.10 ft. (irregular); to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed the basis of appeal under section 21 of the building zone resolution was substantiated.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution and that the application be and it hereby is granted on condition that the building be restricted in height to a two-story structure; that there shall be no vehicular exit or entrance on the 182nd street frontage; that the street elevations shall be finished in face brick with architectural terra cotta or stone trimmings; that the 182nd street front shall be of panel design, the brick to be similar in color and texture to that of adjoining structure on 182nd street; that the rear wall and southerly gable wall shall be unpierced throughout their entire height and length; that there shall be no advertising signs of any nature or description displayed on the 182nd street frontage; that no roof signs shall be erected or maintained and no advertising sign other than one projecting sign be erected on the Folin street front; that there shall be no vehicular exit or entrance on Folin street within 25 ft. of the corner formed by the intersection of 182nd street; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

Negative

Absent: Commissioner Flanagan.

THE RESOLUTION:

(429-25-BZ)

WHEREAS, Samuel Gardstein, for Isabelle Weber, owner, filed, April 21, 1925, an application, under the building zone resolution, to permit in a residence district, extending from a business district, the erection and maintenance of a residence building to be used for store purposes on the 1st story; premises 2374-2376 60th street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 9, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that 60th street is in a residence district; that Gravesend avenue is in a business district and Dahill road is in a residence district; the line of the business district intersecting the site of the proposed buildings; and

WHEREAS, the decision of the superintendent of buildings, rendered April 14, 1925, reads:

"Proposition contrary to the zone resolution, Art. II, Sec. 3. (The erection of stores partly in a residential district.)";

and

WHEREAS, the proposed building is of non-fireproof construction, three stories in height, with a frontage of 40 ft. and a depth of 60 ft.; to be occupied as a residence building to be used for store purposes on the 1st story; and

WHEREAS, applicant has established his basis of appeal under section 7-c of the building zone resolution, and the board deemed that it would be a hardship to deprive applicant of a reasonable use of his entire plot and that this case also comes within the purview of section 21 of the zoning resolution.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution and that the application be and it hereby is granted on condition that the use and occupancy of the ground floor of the building shall be restricted to mercantile stores or shops, not operated on Sundays; that there shall be no advertising signs or display, other than the plate glass show windows; that the rest of the structure shall be restricted to conforming residential use and occupancy; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building erected within eighteen months from the date of this action.

551-25-BZ.

APPLICANT—Alfred H. Eccles, for Henry Hellenek, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district and also within 200 feet of a school the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

THE RESOLUTION:

(551-25-BZ)

WHEREAS, Alfred Eccles, for Henry Hellenek, owner, filed, May 27, 1925, an application, under the building zone resolution, to permit in a business district and also within 200 ft. of a school, the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises south side of Patterson avenue, 50 ft. west of Ely avenue, Astoria, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 9, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Patterson avenue and Ely avenue are within the business district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 22, 1925, reads:

"1. Garage for more than five (5) motor vehicles in a business district is prohibited by the zone law.

"2. Your plot plan also shows that the proposed garage is to be located within 200 ft. of a school.";

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 50 ft. and a depth of 150 ft.; to be occupied as a garage for more than five motor vehicles; and

WHEREAS, the board deemed that applicant did not establish a basis of appeal under hardship, and there was vigorous opposition to the granting of the application on the part of affected property owners.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

WHEREAS, William J. Conway, for John Muldoon, owner, filed, December 30, 1924, an application, under the building zone resolution, to permit in a business district the erection

MINUTES

and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 64-68 West 9th street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 9, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 9th street is in the business district, Henry street is in the business and unrestricted district and Mill street is in the unrestricted district; and

WHEREAS, the decision of the superintendent of buildings, rendered September 29, 1925, reads:

"A public garage for more than five motor vehicles in a business district is contrary to zone resolution; Art. 2, Sec. 4 a 15.";

and
WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 51 ft. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five (5) motor vehicles; and

WHEREAS, applicant substantiated his basis of appeal under section 7-g, filing 83 per cent of consents of affected property owners, and there was no opposition to the granting of the application and the board deemed that it would be a hardship to deny the use of the premises asked for, under restrictive safeguard conditions.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution and that the application be and it hereby is granted on condition that the building be restricted to a one-story structure in height above grade; that the rear and gable walls shall be unpierced throughout their entire height and length; that there shall be not less than six skylights located in the roof, equidistant from the front and rear, glazed with plain glass, protected with wire guards above and below; that the front elevations shall be finished in face brick, with architectural terra cotta or stone trimmings; that there shall be no signs or advertising displayed except one projecting sign indicating the title of the garage; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building erected within eighteen months from the date of this action.

THE RESOLUTION:

(306-25-BZ)

WHEREAS, William Farrell, for Emil E. Gabler, owner, filed, March 19, 1925, an application, under the building zone resolution, to permit in a business district the use and occupancy of a new building as a garage for the storage of more than five (5) motor vehicles; premises 700 Southern boulevard, northeast corner of Leggett avenue, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 9, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Southern boulevard is in the business district, Leggett avenue is in the business and unrestricted district and Whitlock avenue is in the unrestricted district; and

WHEREAS, the decision of the superintendent of buildings, rendered February 4, 1925, reads:

"1. Proposed occupancy of building as a garage for the storage of more than five (5) motor vehicles in a business district is contrary to the provisions of the Building Zone Resolution.";

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 116 ft. and a depth of 82 ft.; to be occupied as a garage for more than five (5) motor vehicles; with stores facing Southern boulevard; and

WHEREAS, the board deemed that applicant established his basis of appeal under section 21 and that it would be a hard-

MINUTES

ship to deny the requested use of this premises in view of the other prohibited uses in the street and unrestricted use district adjoins the property on the east.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution and that the application be and it hereby is *granted on condition* that the building shall not exceed one story in height; that the business frontage on Southern boulevard, for a depth of not less than 40 ft., shall be restricted and maintained as retail stores, separated from the garage area; that the garage area of the structure shall not exceed a width of 40 ft. nor a depth of 107 ft.; that the front elevations on Southern boulevard and Leggett avenue, other than the plate glass show windows, shall be finished with face brick and architectural terra cotta or stone trimmings; that there shall be no roof signs erected; that any advertising display shall be confined to the plate glass show windows; that there shall be no gasoline storage equipment installed on the premises; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

THE RESOLUTION:

(586-25-BZ)

WHEREAS, Harrison G. Wiseman, Magnuson & Kleinert, for Louis N. Jaffe, owner, filed, June 8, 1925, an application, under the building zone resolution, to permit in a residence district, extending from a business district, the erection and maintenance of a building for store and theatre purposes; premises 181-189 Second avenue and 240-242 East 12th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 9, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Second avenue and 11th street is in the residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered June 2, 1925, reads:

"1. Inasmuch as the lot is situated partly within a residence district the erection of a building for theatre occupancy is prohibited by the Building Zone Resolution. Art. 2, Sec. 3.";

and
WHEREAS, the proposed building is to be of fireproof construction, three stories in height, with a frontage of 103 ft. and a depth of 108 ft. 10 in.; to be occupied for theatre and store purposes; the building extending 17 ft. 3 in. into the residence district; and

WHEREAS, the board deemed that applicant established his basis of appeal under section 7-c of the zoning resolution and there was no opposition on the part of affected property owners, and the board considered the variation a reasonable one with the safeguards imposed.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution and that the application be and it hereby is granted on condition that the building to be erected shall not exceed a one-story structure in height; that there shall be no signs or advertising display of any nature or description permitted on the 12th street side of the structure; that the street elevations shall be finished in face brick with architectural terra cotta or stone trimmings or cut stone; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

"Erection of a building of the size indicated for use as a factory in a business district is prohibited by the zone law.";

and

WHEREAS, the proposed building is to be of fireproof construction, two stories in height, with a frontage of 225 ft. and a depth of 100 ft.; to be occupied as a 100 per cent factory building; and

WHEREAS, the board deemed that applicant established his basis of appeal under section 21 of the building zone resolution, and that the granting of the application under the conditions imposed was a benefit to property owners adjacent, and all opposition to the granting of the application having been withdrawn.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution and that the application be and it hereby is *granted on condition* that the building be restricted to a two-story structure above grade, the manufacturing use to be restricted to a use other than those specifically prohibited under section 4 of the building zone resolution; that the building zone requirements otherwise shall be complied with in all respects as to height, area and use; that the facade on the street front shall be finished with face brick, limestone or architectural terra cotta; that a return drawing of proposed elevation showing design on the street front shall be submitted to this board for approval before submission of same to the superintendent of buildings for final consideration; that any chimney stack erected in conjunction with this plant shall be located at the extreme rear of the building on the premises; that all necessary permits shall be obtained within nine months and the building completed within eighteen months from the date of this action.

553-25-BZ.

APPLICANT—South Ozone Park Operating Co., Inc., Samuel Baker, President.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district extending from a business district the erection and maintenance of a theatre building.

PREMISES AFFECTED—Northwest corner Zuider and Nebraska avenues, South Ozone Park, Borough of Queens.

APPEARANCES—

For Applicant: John Caldwell Myers, John L. Ackerson and Samuel Baker.

For Opposition: Daniel F. Nugent, Fred Buck and others.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Chairman Walsh and Commissioner Connell	2
Negative: Commissioners Flanagan and Guilfoyle	2
Absent: Fire Chief Kenlon.....	1

THE RESOLUTION:

(553-25-BZ)

WHEREAS, South Ozone Park Operating Company, Inc., Samuel Baker, president, owner, filed, May 27, 1925, an application, under the building zone resolution, to permit in a residence district, extending from a business district, the erection and maintenance of a theatre building; premises northwest corner Zuider and Nebraska avenues, South Ozone Park, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 9, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Zuider avenue is a business and residence district, Nebraska avenue and Yukon avenue within the residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered May 25, 1925, reads:

"Erection of a business building extending into a residence district is prohibited by the zone law.";

and

WHEREAS, the proposed building is to be of fireproof construction, two stories in height, with a frontage of 100 ft. and a depth of 170 ft.; to be occupied as a theatre, a portion extending into the residence district; and

WHEREAS, the board was divided in opinion as to the applicant establishing a case of hardship within the meaning of section 21 of the building zone resolution.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

CASES DISMISSED.

Building Zone Applications.

The chairman called attention to the following cases, where notices of intention to appeal were offered for filing; but where, despite notification from this office, papers have not been completed, thus tying the hands of the administrative official in the performance of his duty:

(121-24-BZ)

Filed January 26, 1924—Premises 9004 Pleasant street, Hollis, Queens. Order of the fire commissioner. Applicant, William Oetjen. Dismissed for lack of prosecution.

(1448-24-BZ)

Filed December 9, 1924—Premises east side of Webster avenue, 123 ft. south of East 183rd street, The Bronx. Decision of the superintendent of buildings. Applicant, George Nordham. Dismissed for lack of prosecution.

(49-25-BZ)

Filed January 12, 1925—Premises 1601-1613 Cropsey avenue and 8815-39 16th avenue, Brooklyn. Decision of the superintendent of buildings. Applicant, Abraham Propper. Dismissed for lack of prosecution.

(92-25-BZ)

Filed January 22, 1925—Premises 217-221-223 West 230th street, The Bronx. Violation order of the superintendent of buildings. Applicant, Arne Dehli. Dismissed for lack of prosecution.

(153-25-BZ)

Filed February 4, 1925—Premises east side of Old Right of Way street, 180 ft. north of 84th street, Brooklyn. Decision of the superintendent of buildings. Applicant, Angelo Adamo. Dismissed for lack of prosecution.

(155-25-BZ)

Filed February 5, 1925—Premises 567 Drew avenue, Brooklyn. Order of the fire commissioner. Applicant, George Gorayeb. Dismissed for lack of prosecution.

MINUTES

(205-25-BZ)

Filed February 20, 1925—Premises 737-743 Pennsylvania avenue, Brooklyn. Decision of the superintendent of buildings. Applicant, Victor Tria. Dismissed for lack of prosecution.

(231-25-BZ)

Filed February 25, 1925—Premises 49-59 Avenue U, Brooklyn. Decision of the superintendent of buildings. Applicant, Julian V. Carabba. Dismissed for lack of prosecution.

(261-25-BZ)

Filed March 9, 1925—Premises 2444-46 Coney Island avenue, Brooklyn. Decision of the superintendent of buildings. Applicant, Emil Guterman. Dismissed for lack of prosecution.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4
Negative 0
Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

WHEREAS, the foregoing applicants have filed with the board of standards and appeals applications under the building zone resolution, affecting the premises in question; and

WHEREAS, the applicants have failed to complete their papers, though duly notified to do so.

Resolved, that the applications be and they hereby are dismissed for lack of prosecution.

Adjourned 6:00 p. m.

EDWARD V. BARTON, *Acting Secretary.*

MINUTES

BOARD OF STANDARDS AND APPEALS

REGULAR MEETING.

TUESDAY MORNING, OCTOBER 13, 1925.

Present: Chairman Walsh, Commissioners Flanagan, Guilfoyle, Connell and Fire Chief Kenlon.

The minutes of the regular meeting of the board of Standards and Appeals, held on Tuesday morning, October 6, 1925, and the minutes of the regular meeting of the board of standards and appeals, held on Tuesday afternoon, October 6, 1925, were approved as published in the Bulletin, No. 39, Vol. X.

APPEALS FROM ADMINISTRATIVE ORDERS.
583-25-A.

APPELLANT—Ferdinand Tannenbaum, for General Box Company, lessee.

SUBJECT—Appeal from order of fire commissioner.

APPEARANCES—

For Appellant: Merwin Lewis.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal laid over to November 10, 1925, at 10 a. m., on request of appellant's representative.

615-25-A.

APPELLANT—Edward P. Doyle, for Queensboro Bridge Loft Corp., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—Sunswick street and Wilbur avenue, Long Island City, Queens.

APPEARANCES—

For Appellant: Edward P. Doyle.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal laid over to October 27, 1925, at 10 a. m., on request of representative of fire department.

278-25-A.

APPELLANT—The Frank A. Munsey Co., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—280 Broadway, Manhattan.

APPEARANCES—

For Appellant: James F. Conway, Jr.

ACTION OF BOARD—Appeal laid over to November 4, 1925, at 10 a. m., on request of appellant's representative.

1462-24-A.

APPELLANT—Croker National Fire Prevention Engineering Co., for Spear & Co., owner.

SUBJECT—Reopening—appeal from order of fire commissioner.

PREMISES AFFECTED—186-188 Wooster street, Manhattan.

APPEARANCES—None.

ACTION OF BOARD—Appeal laid over to October 27, 1925, at 10 a. m., on written request.

542-25-A.

APPELLANT—Merrill Drop Hammer Co., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—1 Arnold street, southwest corner of Arctic street, Maspeth, Borough of Queens.

APPEARANCES—

For Appellant: George H. Merrill.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon 5
Negative 0
Absent 0

THE RESOLUTION:

(542-25-A)

WHEREAS, Merrill Drop Hammer Company, owner, filed, May 26, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises No. 1 Arnold street, southwest corner of Arctic street, Maspeth, Borough of Queens; and

WHEREAS, the order of the fire commissioner, dated May 18, 1925, reads:

"1. Install a standpipe system with risers 4 inches in diameter * * *";

and

WHEREAS, the building is non-fireproof, one and two stories in height having a frontage of 118 ft. on Arnold street and a frontage of 112 ft. on Arctic street, approximately 13,000 sq. ft.; OCCUPIED as a machine shop, 19 persons in entire premises; and

WHEREAS, appellant contends that the building exceeds the allowable 10,000 sq. ft. only on the 1st story; that the building is low in height, faces on two street fronts and is open at the side and rear; that there is no inflammable material used in the premises and that there are four city fire hydrants and a fire alarm box in the immediate vicinity.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that the structure shall not be increased in height or area, and so long as the use and operation shall be confined to machinery manufacturing and assembling.

MINUTES

566-25-A.

APPELLANT—William H. Gompert, for Board of Education, City of New York, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—314-324 West 21st street, Manhattan.

APPEARANCES—

For Appellant: James J. Sheridan.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon

Negative

Absent

THE RESOLUTION:

(566-25-A)

WHEREAS, William H. Gompert, for City of New York, owner, filed, June 1, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 314-324 West 21st street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated March 17, 1925, reads:

"Referring to your application dated January 8, 1925, for a permit to store and use liquified chlorine at the aforementioned address, I regret to inform you that your application for such permit is disapproved for the reason that

"1. Storage of liquified chlorine in a building occupied as a school is not permitted by Section 214-A4F, Chapter 10, Code of Ordinances.";

and

WHEREAS, the building is fireproof, five stories in height, 150 ft. by 184 ft. in area; OCCUPIED as a public school, approximately 560 persons per story; and

WHEREAS, appellant contends that the quantity of liquified chlorine gas—used for purifying the water in the swimming pool—is limited to 20 pounds; that it is properly operated and that all safeguards have been provided and that all of the equipment is located in the pump room in the basement.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that the quantity of chlorine stored on the premises shall be restricted to one 20-pound cylinder, said cylinder to be submerged in water in a metal reservoir of not less than 55-gallon capacity, equipped with a trip releasing valve on water supply line; said reservoir shall be enclosed in a 4 in. terra cotta partition with not more than one opening thereto, equipped with rabbeted door; and that the enclosure shall be vented direct to the outer air by a duct of not less than 24 inches square, protected with a mesh or register at both intake and outlet.

580-25-A.

APPELLANT—Globe Automatic Sprinkler Co., for R. W. Realty Co., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—189-195 Hudson street, Manhattan.

APPEARANCES—

For Appellant: G. W. Spicer.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—

THE RESOLUTION:

(580-25-A)

WHEREAS, Globe Automatic Sprinkler Co., for R. W. Realty Co., lessee, filed, June 5, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 189-195 Hudson street and 1-3 Desbrosses street, Manhattan; and

WHEREAS, the order of the fire commissioner reads:

"1. Provide a local electric high and low gravity tank alarm for sprinkler system. Sec. 20, Ch. 12, Code of Ordinances.";

and

WHEREAS, the building is fireproof, six stories in height, 110 ft. by 121 ft. in area; OCCUPIED as a telephone exchange on the lowest three (3) stories and as a shoe company warehouse above, 115 persons above the 2nd story, the building being equipped with a sprinkler system; and

WHEREAS, appellant contends that in lieu of the local electric high and low gravity tank alarm, that there is provided a mercury gauge device, approved by the factory mutual fire insurance companies, which is superior to the tell-tale on the tank, in so much as it is not affected by ice, will not stick and can be conveniently located.

Resolved, that the order of the fire commissioner be and it hereby is affirmed, and the appeal be and it hereby is denied.

620-25-A.

APPELLANT—Smith, Townley & Chambers, for DeVinne Press, lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—393-399 Lafayette street and 21-23 East Fourth street, Manhattan.

APPEARANCES—

For Appellant: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon

Negative

Absent

THE RESOLUTION:

(620-25-A)

WHEREAS, Smith, Townley and Chambers, for DeVinne Press, lessee, filed, June 15, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 393-9 Lafayette street and 21-3 East 4th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated May 25, 1925, reads:

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellars, and roofs), placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto.";

and

WHEREAS, the premises consist of two non-fireproof buildings (connected by horizontal exits on the 1st, 3rd, 4th, 6th and 7th stories protected by fireproof doors), seven stories (92 ft. 6 in. average height of gable) in height, having a frontage of 100 ft. on Lafayette street and 117 ft. 8 in. on East 4th street; OCCUPIED as a tenant factory—mostly printing—136 persons above the 1st story in the Lafayette street section and 69 persons above the 1st story in the East 4th street section; and

WHEREAS, a similar appeal was granted by the board under Cal. No. 1913-17-A, in view of the fact that the building is equipped with a 100 per cent sprinkler system, an interior fire alarm signal system and the occupancy lim-

MINUTES

ited to 100 persons above the 1st story in either section at any one time; and

WHEREAS, appellant contends that the exit capacities are far in excess of the actual number of persons employed, and requests permission of the board to permit the increased and existing occupancy of 136 persons in the Lafayette street section.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the building shall be equipped with an approved sprinkler system in accordance with the rules of the board of standards and appeals for existing sprinkler systems; that an interior fire alarm system, with central office connection shall be maintained; that the use shall remain substantially unchanged; and that the occupancy of structure shall not exceed fifty (50) persons on any one floor.

623-25-A.

APPELLANT—James W. Byrnes, for Mirizusanina, Inc., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—34-40 South First street, Brooklyn.

APPEARANCES—

For Appellant: James W. Byrnes.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Flanagan, Connell and Fire Chief

Kenlon 4

Negative: Commissioner Guilfoyle 1

Absent 0

THE RESOLUTION:

(623-25-A)

WHEREAS, James W. Byrnes, for S. Monday & Son, lessee, filed, June 17, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 34-40 South 1st street, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated January 29, 1925, reads:

"1. Provide iron shutters at all openings in the exterior wall above 1st story, which are distant and in a direct line less than 30 ft. from any opening in any other building and not in the same plane with said openings and which are not more than 50 ft. above a neighboring roof at east side of building, or other approved protection, as per Sec. 375, Art. 18, Chap. 5 of the Code of Ordinances."

and

WHEREAS, the building is non-fireproof, four and five stories in height, 97 ft. by 81 ft. in area. OCCUPIED: Cellar, storage, 1 person; 1st floor, stable, paper box mfg., 10 persons (part vacant); 2nd floor, laboratory, shipping and offices, 6 persons; 3rd floor, mfg. shoes, 34 persons; 4th floor, mfg. shoes, 27 persons; 5th floor, dresses, 25 persons; and

WHEREAS, there are three (3) windows on the 3rd, 4th and 5th stories within 50 ft. of the roof of a neighboring building to the east; and

WHEREAS, appellant contends that the premises is equipped with a sprinkler and fire alarm system and also supervised by a watchman patrol at all times and that the adjoining building, forming the exposure, is fireproof, equipped with sprinkler system, and that there is but one skylight (fireproof) in the roof.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so long as adjoining building to the east shall not be increased in height, area or dimensions and shall remain one story in height.

568-25-A.

APPELLANT—James F. Egan, for Peerless Unit Ventilation Co., Inc., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—Southeast corner of Hulst street and Skillman avenue, Long Island City, Borough of Queens.

APPEARANCES—

For Appellant: James F. Egan.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire

Chief Kenlon 5

Negative 0

Absent 0

THE RESOLUTION:

(568-25-A)

WHEREAS, James F. Egan, for Arnold Levien, owner, filed, June 2, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises at the southeast corner of Skillman avenue and Hulst street, Long Island City, Borough of Queens; and

WHEREAS, the order of the fire commissioner, dated March 16, 1925, reads:

"3. Install an approved 4 in. standpipe tested to withstand a pressure of 300 lbs. per square inch. Plans and specifications to be submitted and approved by the Fire Department before the above work may be commenced. Sec. 581, Chap. 5, Code of Ord.;"

and

WHEREAS, the building is non-fireproof, one story (16 ft.) in height, having a frontage of 161 ft. on Hulst street and a frontage of 108 ft. 10 in. on Skillman avenue (approximately 14,000 sq. ft. in area); OCCUPIED as a factory for manufacturing sheet metal specialties, and also a paint shop; and

WHEREAS, appellant contends that the boiler room (located in the cellar and having no direct entrance to the 1st story) is isolated from the rest of the premises by 8 in. of concrete; that the paint shop is separated from the rest of the premises by a 4 in. plaster block partition; that the building is low in height, accessible from two street fronts and that there are three city fire hydrants in the immediate vicinity.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the building shall not be increased in height or area, and so long as the present use and operation of business remains substantially unchanged, that is, the manufacturing and assembling of sheet metal products.

190-25-A.

APPELLANT—S. S. Kresge Co., lessee.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—526 Fulton street, Brooklyn.

APPEARANCES—

For Appellant: R. M. Kearns and E. W. Haack.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire

Chief Kenlon 5

THE RESOLUTION:

(190-25-A)

WHEREAS, S. S. Kresge Co., lessee, filed, February 17, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 526 Fulton street, Brooklyn; and

MINUTES

WHEREAS, the decision of the fire commissioner, rendered November 1, 1924, reads:

"1. The building being over forty feet in height, a gravity tank of at least 3,500 gallon capacity must be provided. Boiler of tank must be twenty feet above the roof."

and

WHEREAS, the building is non-fireproof, three stories and basement in height, 45 ft. on Fulton street, 135 ft. on Grove place by 140 ft. (irregular), 11,520 sq. ft. in area; OCCUPIED as offices, storage and salesrooms; EQUIPPED with a sprinkler system; and

WHEREAS, the appellant has submitted plans to the fire department for the installation of a standpipe system; and

WHEREAS, the appellant claims the building is only ten inches more in height where a gravity tank is not required; that the existing sprinkler system is fed from two street mains; that the minimum water pressure is 40 pounds per square inch; that the standpipe system is installed and meets with all the requirements of the fire commissioner, except as to tank, and requests the board to be relieved of providing a gravity tank.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the installation of gravity tank, *on condition* that not less than a 4 in. street main connection shall be installed; and that the installation of standpipe otherwise shall comply with the rules.

1370-24-A.

APPELLANT—E. H. Barbe, for U. S. E. Corporation, lessee.

SUBJECT—Application for extension of permit—appeal from decision of fire commissioner.

PREMISES AFFECTED—296-322 Vernon avenue, Long Island City, Borough of Queens.

APPEARANCES—

For Appellant: E. H. Barbe.

ACTION OF BOARD—Appeal reopened and permit granted for ninety days from date of this action, *on condition*.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND EXTEND PERMIT—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle....	4
Negative	0
Absent: Fire Chief Kenlon.....	1

THE RESOLUTION:

(1370-24-A)

WHEREAS, U. S. E. Corporation, lessee, filed, November 19, 1924, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 296-322 Vernon avenue, Long Island City, Borough of Queens; and

WHEREAS, the decision of the fire commissioner, Alt. App. No. 2421-24, dated November 12, 1924, reads:

"1. Burner must be of a type approved by the Board of Standards and Appeals."

and

WHEREAS, the building is non-fireproof, one story in height, 162 ft. by 200 ft., irregular in area; OCCUPIED for the manufacture of auto bumpers; and

WHEREAS, it is proposed to install a fuel oil burning system, consisting of a 1,500-gallon fuel oil tank, a Viking pump, Tate-Jones burners and the necessary valves and piping; to be used for the heat treatment of metal; and

WHEREAS, this appeal was granted by the board at its meetings, April 14, 1925, and July 28, 1925, for a temporary period, and appellant requested an extension of the time limit set.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, restricting the use and operation of the burner to industrial operation of annealing and metal treating furnaces, including the use of the Viking pump, *on condition* that all moving parts of the pump in contact with the oil

shall be of bronze or brass; that the fuel oil installation otherwise throughout shall comply with the fuel oil rules of the board of standards and appeals; and that all necessary permits shall be obtained within ninety (90) days from date of this action.

THE RESOLUTION:

(491-25-BZ)

WHEREAS, Edwin W. Crumley, for Carlo De Luca, owner, filed, May 11, 1925, an application, under the building zone resolution, to permit in a residence district the alteration and change of occupancy in part from a residence use to a business use; premises 1413 Needham avenue, north side, 126 ft. east of Fish avenue, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 13, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Needham avenue, Oaklev avenue and Fish avenue are all in residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered April 17, 1925, reads:

"1. Proposed occupancy for business use in residence district unlawful."

and

WHEREAS, the existing building is of non-fireproof construction, two stories in height, with a frontage of 21 ft. and a depth of 50 ft.; to be changed from a residence use to a business use; and

WHEREAS, applicant filed consents of owners of 1,000 feet of frontage affected, indicating the affirmative disposition of neighbors, and the board deemed that granting a temporary permit was reasonable relief.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that there be no outward evidence of commercial operation or structural change such as store show-window, etc.; that the business conducted on the premises shall be restricted to retail stationery store and candy store, confined to the basement story front room; and that this permission shall be granted for a temporary period only of two years from the date of this action.

506-25-BZ.

APPLICANT—William F. Doyle, for Ferdinand Curth, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—229-233 Marion street, Brooklyn.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: Eugene Sziklay.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative: Fire Chief Kenlon..... 1

Absent 0

THE RESOLUTION:

(506-25-BZ)

WHEREAS, William F. Doyle, for Ferdinand Curth, owner, filed, May 13, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 229-233 Marion street, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 13, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Marion street is in a residence district and that Ralph avenue and Howard avenue are in business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered May 4, 1925, reads:

"Proposition contrary to the zone resolution, Art. 2, Sec. 3.

"The erection of a public garage for more than five motor vehicles in a residential district."

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 25 ft. by 75 ft. at rear and a depth of 100 ft.; to be occupied as garage for the storage of more than five motor vehicles; and

WHEREAS, applicant filed 82 per cent of consents of affected property owners, in support of his appeal under section 7-g of the zoning resolution, and the one person appearing in objection was satisfied as to the conditions of safeguard imposed by the board and withdrew his objection.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the substitution of present non-conforming use to that of public garage, specifically that the existing building shall not be altered, extended or increased in height, area or dimensions; that no additional building be erected on these premises; that any advertising display on these premises shall be restricted and limited to the plate glass show-windows, and no other sign shall be hung, erected or maintained; and that there shall be no gasoline storage equipment, other than that now existing on the premises, installed or permitted.

555-25-BZ.

APPLICANT—William A. Lacerenza, for Samuel Klein, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit the extension from a business district into a residence district of a proposed building to be used for business purposes (dance hall).

MINUTES

PREMISES AFFECTED—1062 St. Johns place, Brooklyn.

APPEARANCES—

For Applicant: Nathan April and Samuel Klein.

For Opposition: Bridget Gartland, George Eggers, Susan Eggers, J. R. Thompson and Ed L. Kelly.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Commissioner Connell and Fire Chief Kenlon 2

Negative: Chairman Walsh, Commissioners Flanagan and Guilfoyle 3

Absent 0

THE RESOLUTION:

(555-25-BZ)

WHEREAS, William Lacerenza, for Samuel Klein, owner, filed, May 29, 1925, an application, under the building zone resolution, to permit the extension from a business district into a residence district of a proposed building to be used for business purposes (dance hall); premises 1062 St. Johns place, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 13, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that St. Johns place and Kingston avenue are in business districts, and that Lincoln place is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 19, 1925, reads:

"Building extends into a residence district, contrary to Zoning Resolution."

and

WHEREAS, the premises consist of a non-fireproof one-story and mezzanine motion picture theatre, 50 ft. by 115 ft. in area, and also of an open-air motion picture theatre, 100 ft. by 50 ft. in area; it is proposed to cover part of the open-air theatre and also a portion of the back of the theatre; to alter the theatre and use the premises as stores, banquet hall and guests' ballroom as accessories to a catering business, leaving a 6 ft. yard along rear of lot; the proposed building extends into the residence district for a distance of 14 ft.; and

WHEREAS, there was vigorous opposition by property owners immediately affected and a majority of the board deemed the granting of the application unwarranted.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and that the application be and it hereby is denied.

570-25-BZ.

APPLICANT—Michael Pellegrino, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a business district and partly in a residence district the erection and maintenance of five (5) buildings, to be used for stores on the first story and dwellings above.

PREMISES AFFECTED—Northwest corner of Avenue U and Ocean avenue, Brooklyn.

APPEARANCES—

For Applicant: Michael Pellegrino.

For Opposition: Harry Hoffert, Mrs. Esther Chasan and Mrs. Sheck.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(570-25-BZ)

WHEREAS, Michael Pellegrino, owner, filed, June 2, 1925, an application, under the building zone resolution, to permit partly in a business district and partly in a residence district the erection of five (5) buildings, to be used for stores on the 1st story and as dwellings above; premises northwest corner of Ocean avenue and Avenue U, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 13, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Ocean avenue is in a residence district, and that Avenue U from a point 100 ft. east and west of Ocean avenue is in a business district; and

WHEREAS, the decisions of the superintendent of buildings, rendered May 19, 1925, read:

"The erection of stores in a residential district is contrary to the Zone Resolution, Art. II, Sec. 3."; and a similar decision rendered on premises north side Avenue U, 36 ft. 6¾ in. west of Ocean avenue; and

WHEREAS, the premises, 111 ft. 6¾ in. on Avenue U and 100 ft. on Ocean avenue, consists of five non-fireproof buildings, four being two stories in height, and the corner building being three stories in height; the premises extend 11 ft. 6¾ in. into the business district, the remainder being in the residence district; it is proposed to use the premises, 1st story for stores and dwellings above; and

WHEREAS, the board deemed that, with safeguarding conditions for the protection of adjacent and affected property owners, the granting of the application was a reasonable adjustment under the provisions of sections 7-c and 21 of the building zone resolution.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the structure shall set back from the building line on the Ocean avenue front at least 10 ft.; that the business use shall be confined and restricted to the 1st story or street floor, with cellar accommodations incidental thereto; that there shall be no openings on the Ocean avenue front for the use, operation or conduct of business of any nature or description; that the street elevations shall be finished with face brick and architectural terra cotta or stone trimmings, other than the show windows on the Avenue U frontage; that there shall be no signs or advertising display of any nature or description permitted on the Ocean avenue front of the building; that any advertising on the Avenue U front shall be restricted to the plate glass show windows of the stores; that the Ocean avenue wall shall return and be maintained at the corner with a pilaster or pier not less than 12 in. face on the Avenue U front; that the sills of any windows to the corner store, on the Ocean avenue front, shall be not less than 8 ft. above the curb level; that a return drawing of the proposed elevation on the Ocean avenue front shall be submitted to this board for approval as to design before being submitted to the superintendent of buildings; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

560-25-BZ.

APPLICANT—Charles Kreymborg & Son, for Cerussi Contracting Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit the extension from an unrestricted district into a business district of a proposed garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—4583 Third avenue, The Bronx.

THE RESOLUTION:

(560-25-BZ)

WHEREAS, Charles Kreymborg, for Cerussi Contracting Company, owner, filed, May 29, 1925, an application, under the building zone resolution, to permit the extension from an unrestricted district into a business district of a proposed garage for the storage of more than five motor vehicles; premises 4583 Third avenue, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 13, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Third avenue is in an unrestricted district; that Bathgate avenue is in a business district and Lorillard place is in a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 12, 1925, reads:

"8. Proposed extension of public garage in business district contrary to Zoning Resolution.";

and

WHEREAS, it is proposed to alter three one-story non-fireproof buildings on a lot having a frontage of 112 ft. on Third avenue and a maximum depth of 197 ft., into a public garage for the storage of more than five motor vehicles; two of the existing buildings are now public garages and a rear building, 50 ft. by 70 ft. in area, is used as a marble yard; an irregular portion of the rear building extends into the business district for a distance of 34 ft. 6 in., the remainder of the premises being in the unrestricted district; and

WHEREAS, the board deemed that the granting of the appeal was a reasonable application of the provisions of section 7-c of the building zone resolution.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the rear and gable walls within the business area shall be unpierced throughout their entire height and length; and that all necessary permits shall be obtained within sixty (60) days.

863-25-BZ.

APPLICANT—Francis L. Archer, for Empire Investors Corporation, William G. Murphy, President, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district extending from a business district the erection and maintenance of a business building.

PREMISES AFFECTED—660 Fifth avenue, Manhattan.

APPEARANCES—

For Applicant: Francis L. Archer, S. S. Menken and Peter Grimm.

For Opposition: Edward T. Corcoran, Howard Hasbrook, DeCoursey Fales, William Solomon, James W. Osborn, Emery Hofmeister, Hobart Davis and others.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle....	4
Negative	0
Absent: Fire Chief Kenlon.....	1

THE RESOLUTION:

(863-25-BZ)

WHEREAS, Francis L. Archer, for Empire Investors Corporation, owner, filed, August 26, 1925, an application, under the building zone resolution, to permit in a residence district, extending from a business district, the erection and maintenance of a business building; premises 660 Fifth avenue, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 13, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Fifth avenue is in a business district; that West 52nd street is in a residence district and that West 53rd street is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered August 14, 1925, reads:

"1. Business use encroaches upon residence district contrary to the provisions of Section 3 of the Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of fireproof construction, 30 stories in height, with a frontage of 100 ft. and a depth of 160 ft. and 167 ft., irregular; to be occupied as a business building; and

WHEREAS, the board deemed that the granting of this application under safeguarding and restrictive conditions for the protection of other affected property was a reasonable application of the provisions of section 7-c of the building zone resolution.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that a side court of not less than 8 ft. in width shall be provided at the extreme westerly end of the plot for its entire depth; that the business use throughout the building, other than the 1st and basement stories, shall be restricted exclusively to the conduct, operation and use of executive offices, with no manufacturing use or occupancy in any part or portion of the building; that the 1st story, and the cellar incidental to the use of the 1st story, shall be restricted to the conduct and operation of stores of a retail, mercantile character or to the conduct and operation of a banking business authorized by the state or federal laws; that there shall be no service exit or entrance for commercial operation within the residence use area of these premises on 52nd street front beyond 125 ft. of the Fifth avenue frontage; that there shall be no show windows, business or commercial display within the residence use area of the premises; that any windows below the roof level of the adjoining premises to the west, in the westerly gable wall, shall be glazed with translucent glass; that there shall be no signs or advertising display on or in any window or on any portion of the rear and westerly gable walls, and no wall signs or advertising of any description; that there shall be no signs or advertising display on the 52nd street front of the building within the residence use area; that the requirements of the building zone resolution shall be complied with in all other respects; that all permits necessary for the prosecution of the work shall be obtained within nine months and the work of building carried to completion without unnecessary interruption or delay.

531-25-BZ.

APPLICANT—William F. Doyle, for Luke Kilgannon, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the alteration and extension of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—East side James street, 136 ft. north of Cornaga avenue, Borough of Queens.

THE RESOLUTION:

(531-25-BZ)

WHEREAS, William F. Doyle, for Luke Kilgannon, owner, filed, May 22, 1925, an application, under the building zone resolution, to permit in a business district the alteration and extension of a garage for the storage of more than five (5) motor vehicles; premises east side James street, 136 ft. north of Cornaga avenue, Queens; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 13, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that James street (Beach 19th street) is in a business district; that Mott avenue is in a business district and that Cornaga avenue is in a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 5, 1925, reads:

"Contrary to the Building Zone resolution, in that a garage for more than five cars may not be extended into a business district.";

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 50 ft. and a depth of 100 ft.; occupied as a garage for the storage of more than five (5) motor vehicles; and

WHEREAS, the board deemed that denial of this application would be a hardship because of the non-conforming use existing on the premises at the time of the adoption of the building zone resolution.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the proposed extension shall be restricted to a one-story structure in height, not exceeding the roof elevation of the existing and abutting structures which are part and parcel of the same premises; that the exterior walls of this proposed extension shall be unpierced throughout their entire height and length; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

979-24-BZ.

APPLICANT—Barnett & Mintz, for I. & A. Holding Corp., owner.

SUBJECT—Application for reopening (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of three-story dwellings to be used for store purposes on the first story.

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4
Negative 0
Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(979-24-BZ)

WHEREAS, William F. Doyle, for Ulysses G. Church, owner, filed, July 28, 1924, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of three-story dwellings to be used for store purposes on the 1st story; premises 6914-6932 Fourth avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, October 21, 1924, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Fourth avenue and Ovington avenue are residence districts and Bay Ridge avenue is a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered July 8, 1924, in acting on N. B. Application No. 14274-24, reads:

"Building with stores in a residence district is contrary to Section 3 of Article 2 of the Bldg. Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, three stories in height, with a frontage of 162 ft. 10½ in. and a depth of 57 ft. 2 in.; to be occupied as dwellings in the upper two stories and stores in the 1st story; and

WHEREAS, owing to the proximity of the existing garage, the board deemed there would be hardship in preventing applicant from making the proposed use of the premises; and

WHEREAS, this application was granted by the board of appeals at its meeting October 21, 1924, on certain conditions, and owner requested a modification of the conditions as to the rear wall.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted* only so far as it affects the 1st story and basement on the Fourth avenue front, *on condition* that the use of the entire proposed building above the 1st story shall be restricted to conforming residential use; that the business use shall be restricted and limited to stores for the conduct of retail business permitted by section 4, article 2 of the building zone resolution; that the street wall on Ovington avenue front shall set back fifteen (15) ft. northerly from the Ovington avenue building line; and that there shall be a return brick pier from the Ovington avenue front of at least sixteen (16) inches on Fourth avenue elevation; that the Fourth avenue front and the Ovington avenue front of the building, other than the show windows, shall be finished in face brick and architectural terra cotta or stone trimmings of attractive architectural design; that any openings on the Ovington avenue elevation, 1st story, shall be restricted to the use and operation of the residential occupancy of the building; that there shall be no commercial display or advertising signs of any nature or description permitted on the Ovington avenue front; that any commercial display signs or advertising on the Fourth avenue front shall be restricted to the show windows of the stores on the 1st story; that the rear of premises shall be finished with three coats of light color paint, composed of linseed oil and white lead, lined and matched with brick jointing of dust color; that the work shall be started within ten (10) days and a return in affidavit form shall be made to this board immediately on its completion; that there shall be no openings in the westerly gable wall except openings on and within the property of the owner of these premises; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

THE VOTE TO REOPEN AND MODIFY—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(577-25-BZ)

WHEREAS, Bandler, Haase & Collins, for 212 West 72nd Street Corp., owner, filed, June 4, 1925, an application, under the building zone resolution, to permit in a residence district and "B" area district, extending from a business district, the alteration and extension of a building to be used in part for business purposes, also the omission of a rear yard as required by the building zone resolution; premises 212 West 72nd street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, September 8, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that 72nd street and 71st street are residence use and "B" area districts and Broadway is a business use and "B" area district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 22, 1925, in acting on Alt. App. No. 1042-25, reads:

"2. In a residence district a building devoted to a use not permitted in such district may not be extended. Section 6 of the Building Zone Resolution.

"3. Provide rear yard as required by Section 16-b of the Building Zone Resolution for residence districts."

and

WHEREAS, the existing building is of non-fireproof construction, five stories in height, with a frontage of 25 ft. and a depth of 65 ft. and 81 ft. (irregular); occupied store and dwelling; it is proposed to erect a one-story rear extension 25 ft. by 37 ft. 2 in. covering the entire yard, to be used as a real estate office; and

WHEREAS, it appears that the difference in grade between 71st street and 72nd street brings the roof of the proposed extension approximately 5 ft. above the yard level of 71st street property and there are adjoining business uses to the east; and

WHEREAS, this application was granted by the board at its meeting September 8, 1925, on certain conditions, and applicant requested a modification of these conditions as to the height of rear extension.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the height of the extension shall not exceed approximately 13 ft. to the top of the roof, and in depth 21 ft. 2 in. at the easterly gable and 37 ft. 2 in. at westerly gable; that the rear and gable walls shall be unpierced except

where opening within light courts on property in the same ownership and premises; that the use and occupancy shall be limited and restricted to executive offices in conjunction with the existing real estate business now conducted on the premises; and that all necessary permits shall be obtained within 90 days and the work completed within six months from date of this action.

1559-22-BZ.

APPLICANT—York & Sawyer, for Manhattan Eye, Ear & Throat Hospital, owner.

SUBJECT—Application for reopening (re: decision of superintendent of buildings) to permit in a 1½ times height district the extension of the front wall of an existing building without a set-back to a height exceeding the limit set by the building zone resolution.

PREMISES AFFECTED—208-216 East 64th street, Manhattan.

APPEARANCES—

For Applicant: Paul B. Tuz.

For Opposition: None.

ACTION OF BOARD—Application reopened and extension of time to complete work granted.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND TO EXTEND TIME—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(1559-22-BZ)

WHEREAS, York & Sawyer, for Manhattan Eye, Ear & Throat Hospital, owner, filed, December 26, 1922, an application, under the building zone resolution, to permit in a 1½ times height district the extension of the front wall of an existing building without a set back to a height exceeding the limit set by the building zone resolution; premises 208 to 216 East 64th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, February 20, 1923, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the height district maps accompanying the building zone resolution show that 64th and 63rd streets and Third avenue are 1½ times height districts; and

WHEREAS, the decision of the superintendent of buildings, rendered December 6, 1922, in acting on Alt. App. No. 2893-22, reads:

"1. Building will exceed height permitted by Section 9 of Zone Resolution."

and

WHEREAS, the existing building is of fireproof construction, six stories in height, with a frontage of 118 ft. and a depth of 98 ft.; occupied as a hospital; and

WHEREAS, it is proposed to extend the building in height by the addition of three stories and a pent house; and

WHEREAS, applicant contends that there would be extreme hardship in preventing him from erecting the additional stories as the building was originally designed for a ten-story building; and

WHEREAS, this application was granted by the board at its meetings February 20, 1923, and October 28, 1924, on certain conditions, and applicant requested a modification of the time limit set and an extension of time in which to complete the work.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the height district regulations of the building zone resolution, and that the application be and it hereby is granted as to height restriction only on condition that all permits necessary for the prosecution of the work be obtained within one year and the building completed within one year from the date of this action.

MINUTES

AREA FIXED.

(696-25-BZ)

The chairman presented and read a communication from William F. Doyle, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises northwest corner of Grandview avenue and Ralph street, Ridgewood, Queens.

The following area was approved by the board:

Both sides of Grandview avenue from Grove street to a point 400 feet west of proposed garage; both sides of Ralph street from Forest avenue to a point 200 feet south of Grandview avenue; also the easterly side of Bleeker street from Grandview avenue to a point 150 feet north of Grandview avenue.

Adjourned, 2:20 p. m.

JAMES O'CONNOR, *Secretary.*

THE RESOLUTION:

(413-25-S)

WHEREAS, James B. Fisher Co., for Edward H. Brennan, owner, filed, April 16, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in order of fire commissioner, affecting premises 473-485 Kent avenue, Brooklyn; and

WHEREAS, the order of the fire commissioner reads:

"2. Reduce the area of wire glass in stair hall enclosure at the front of building on each story not to exceed 720 sq. in. on any one floor, nor more than 360 sq. in. in any one pane, as per sec. 271 of labor law and rule 505 of the Industrial Code, amended by Board of Standards and Appeals, April 1st, 1923.";

and

WHEREAS, the building is fireproof, eleven stories in height, 130 ft. 5¼ in. by 124 ft. in area; OCCUPIED as a tenant factory (principally paper box manufacture), 345 persons above the 1st story; the 10th and 11th stories

MINUTES

ing vacant at present; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Two interior fireproof stairways, extending from the 1st story to the roof, enclosed in fireproof partitions with two fire doors at each opening, one a swinging door with wire glass panel and the other an automatic sliding door; and WHEREAS, petitioner contends that the presence of the automatic fire doors at the openings in the stair hall ensure obviates the danger which might occur due to the glass panel in the doors in question.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that the openings shall be equipped with an automatic sliding door in addition to the self-closing door, and that the building shall comply with the requirements of the labor law in all other respects.

488-25-S.

PETITIONER—G. A. Fitting, for Frangold Realty Co., owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—10 West 56th street, Manhattan.

APPEARANCES—

For Petitioner: George A. Fitting.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE RESOLUTION:

(488-25-S)

WHEREAS, G. A. Fitting, for Frangold Realty Company, owner, filed, May 8, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 10 West 56th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 20, 1925, reads:

"1. Enclose the interior stairway at front of building serving as a required means of exit, and the landings, platforms and passageways connecting therewith on all sides with partitions of fire resisting material extending continuously from the 1st story to 3 feet above the roof * * *.

"2. Enclose the interior stairway at rear of building serving as a required means of exit, and the landings, platforms and passageways connecting therewith on all sides with partitions of fire resisting material extending continuously from the basement to 3 feet above the roof, * * *.

"Note:—Among the defects noted on this enclosure and stairway:

"No passageway enclosed in fire resisting material leading to the street from same. Iron beam supporting elevator machinery within enclosure at roof level obstructs means of reaching roof for occupants who would have to climb over same or cross underneath same to get on roof."

WHEREAS, the building is fireproof, six stories and basement, 25 ft. by 73 ft. 11 in. in area. OCCUPIED: basement, office and stores; 1st and 2nd stories, hat sales; 3rd story, dwelling and studio; 4th, 5th and 6th stories, designing and factory, 168 persons above the 1st story. EXITS: Two interior fireproof stairways; front stairway extending from 1st to top story; rear stairway extending from 1st story to roof; the front stairway being open on the 1st and 2nd stories and above enclosed

in brick and terra cotta partitions with fire doors at openings; the rear stairway is enclosed in terra cotta partitions with fire doors at openings; this stairway terminates at the rear of the premises; and

WHEREAS, petitioner proposes—at the top story—to extend the rear stairway over the elevator beams by means of iron steps and gooseneck ladders, making same continuous to the roof, and contends that the rear stairs terminate in basement, where there is a fireproof passageway to the street.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 1, on condition that automatic sliding fireproof doors shall be provided on the 1st story, separating the rear portion from the front, and that direct egress from the stairway through the foyer shall be maintained as now existing; granted, as to Item No. 2, on condition that any windows and all doors along the course of the passageway shall be made fireproof, self-closing, and that the room in the extension adjoining the rear stairs shall be enclosed in fire retarding material, any openings therein to be protected with fireproof self-closing doors or windows; and granted only so long as the conditions as to occupancy and use remain substantially unchanged.

492-25-S.

PETITIONER—Schwartz & Gross, for Broome Street Realty Corp., owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—241-245 West 36th street, Manhattan.

APPEARANCES—

For Petitioner: Alfred A. Tearle.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE RESOLUTION:

(492-25-S)

WHEREAS, Schwartz & Gross, for Broome Street Realty Corporation, owner, filed, May 11, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 241-245 West 36th street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered May 6, 1925, reads:

"6. * * * fireproof windows must have panes not exceeding 720 square inches each; also said windows must be self-closing;"

and WHEREAS, the building is fireproof, sixteen stories in height, 55 ft. 6 in. by 98 ft. 9 in. in area at 1st story; OCCUPIED as a factory building, 70 persons on each story; EQUIPPED with a sprinkler system. EXITS: Two interior fireproof stairways, extending from the 1st story to roof, enclosed in fireproof partitions with fire doors at openings; and

WHEREAS, the petitioner proposes to install front windows at 1st, 2nd and 3rd stories to be part stationary and part pivoted, glazed with $\frac{1}{4}$ in. thick plate glass; maximum sizes, 1st story 8 ft. 10 in. by 14 ft. 2 in., 2nd and 3rd stories 7 ft. 6 in. by 8 ft. 4 in., instead of automatic self-closing windows, with lights not exceeding 720 square in. as required by the labor law; and

WHEREAS, the petitioner claims, if compelled to comply strictly with the labor law with regard to front windows on the first three stories, that the architectural design would be marred; he further contends that all other windows throughout the building will be installed according to

MINUTES

law, and requests the board to permit the installation of the windows as proposed.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the windows on the street front of the three (3) lower stories, *on condition* that all openings shall be equipped with metal frames and sash, glazed with polished plate glass, not less than $\frac{1}{4}$ in. in thickness, and that the requirements of the labor law shall be complied with in all other respects.

THE RESOLUTION:

(493-25-S)

WHEREAS, Schwartz & Gross, for 251 West 37th Street, Inc., Abraham Bricken, president, owner, filed, May 11, 1925, a petition for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 540-552 Eighth avenue and 265-267 West 37th street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered April 28, 1925, reads:

"1. Windows should be constructed to conform to Section 264, Labor Law. No pane may exceed 720 square inches in area.";

and

WHEREAS, the building is fireproof, 23 stories in height, 98 ft. 9 in. by 100 ft. in area at 1st story; OCCUPIED as a factory building, 115 persons on each story; EQUIPPED with a sprinkler system. EXITS: Two interior fireproof stairways extending from the 1st story to roof; enclosed in fireproof partitions with fire doors at openings; and

WHEREAS, the petitioner proposes to install front windows at 1st, 2nd and 3rd stories to be part stationary and part pivoted, glazed with $\frac{1}{4}$ in. thick plate glass, maximum size 8 ft. by 7 ft. on each story, instead of automatic self-closing windows, with lights not exceeding 720 sq. in. as required by the labor law; and

WHEREAS, the petitioner claims that, if compelled to comply strictly with the labor law with regard to front windows on the first three stories, the architectural design would be marred; he further contends that all other windows throughout the building will be installed according to law, and requests the board to permit the installation of the windows as proposed.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law and that the petition be and it hereby is *granted*, only so far as it affects the windows on the street front of the three (3) lower stories, *on condition* that all openings shall be equipped with metal frames and sash, glazed with polished plate glass not less than $\frac{1}{4}$ in. in thickness and that the requirements of the labor law shall be complied with in all other respects.

541-25-S.

PETITIONER—Merrill Drop Hammer Co., owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—1 Arnold street, southwest corner of Arctic street, Maspeth, Borough of Queens.

APPEARANCES—

For Petitioner: George H. Merrill.

For Administration: Inspector Maher of fire department.

THE RESOLUTION:

(541-25-S)

WHEREAS, Merrill Drop Hammer Company, owner, filed, May 26, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises No. 1 Arnold street, southwest corner of Arctic street, Maspeth, Borough of Queens; and

WHEREAS, the order of the fire commissioner, dated May 8, 1925, reads:

"1. Provide an additional means of exit remote from interior stairway as per rule 3, Board of Standards and Appeals, adopted July 29, 1924.";

and

WHEREAS, the building is non-fireproof, one story in height, 118 ft. by 112 ft. in area, there being a second story at the Arctic street front 38 ft. by 112 ft. in area. OCCUPIED: 1st story, machine shop, 15 persons; 2nd story, 4 persons. EXITS (from the 2nd story): An interior open wooden stairway extending from the 1st to 2nd story and also an outside wooden stairway extending from the 2nd story to an open yard at the south side of the building; and

WHEREAS, petitioner contends that in addition to the above means of egress, that there are 14 windows leading out upon the roof of the one-story section of the premises, and contends further that the existing means of egress, in view of the small occupancy, is adequate.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted on condition* that the occupancy of the 2nd story shall not exceed four (4) persons at any one time; and *granted* only so long as conditions as to occupancy and use otherwise remain unchanged.

MINUTES

THE RESOLUTION:

(572-25-S)

WHEREAS, Samuel Rosenblum, for Estate of Charles A. Chesebrough, owner, filed, June 3, 1925, a petition with the board of standards and appeals for variation from the requirements of the labor law, as cited in order of the fire commissioner, affecting premises 471 West Broadway, Manhattan; and

WHEREAS, the order of the fire commissioner reads:

"1. Arrange the fire escape on the rear of building and the openings leading thereto and the windows opening on the course thereof. * * *. Among the defects noted are the following:

"Stairway not continued to roof. No fireproof passageway to street. No balcony over non-fireproof roof of extension leading to stairway that leads to yard.";

and

WHEREAS, the building is non-fireproof, four stories in height, 25 ft. by 96 ft. in area at the 1st story and 25 ft. by 85 ft. in area above. OCCUPIED: 1st story, tile and fixture store; 2nd story, manufacturing corks, 7 persons; 3rd story, assorting corks, 4 persons; 4th story, vacant at present, will have normal occupancy. EXITS: An interior non-fireproof stairway, extending from the 1st story to roof, enclosed in fire-resisting partitions with fireproof doors at openings; a fire escape on the rear of the building, having fireproof openings along the course thereof, extending from the top story balcony (gooseneck leading to roof) to the roof of the one-story extension; with EGRESS from the termination of the fire escape by means of an iron stairway at rear of extension leading to yard, and thence from yard to the adjoining yard, at south, by means of an iron stairway; ROOFS of adjoining buildings to north one story higher, to south two stories higher; and

WHEREAS, petitioner contends that a violation of a similar nature was issued by the Fire Department; that required work was done on the exits of the building and the order dismissed, and requests that, in view of the light occupancy, that the existing means of egress be accepted.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that a double rung gooseneck ladder shall be provided from top balcony of fire escape to the roof; that the windows on the course of the fire escape shall be made fireproof, self-closing; that an iron slatted connecting bridge shall be provided on the roof of the extension from the lower balcony of the fire escape with stairway to the yard; with egress therefrom through passageway at rear of adjoining premises 469 West Broadway; on further condition that the occupancy shall not exceed twenty (20) persons above the 1st story.

THE RESOLUTION:

(612-25-S)

WHEREAS, Samuel Rosenblum, for Joseph H. Schwartz, owner, filed, June 12, 1925, a petition, with the board of

standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 334 Bowery, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated December 27, 1924, reads:

"1. Arrange the fire escape on the rear of building and the openings leading thereto and the windows opening on the course thereof. * * *.

"Note: Among the defects noted are the following: No fireproof passageway to street.

"2. Remove the sub-standard fire escape on the front of the building or reconstruct same * * *. Among the defects noted are the following: Windows on course not fireproof, self-closing.";

and

WHEREAS, the building is non-fireproof, eight stories in height, 35 ft. 2 in. by 90 ft. in area; OCCUPIED as a tenant factory, approximately 35 persons per story; EQUIPPED with a standpipe system and a fire alarm signal system. EXITS: An interior fireproof stairway, extending from the 1st story to roof, enclosed in fireproof partitions with fireproof doors at openings; a fire escape on the front of the building, having unprotected openings along the course thereof, extending from the top story to the 1st story balcony, with drop ladder in guides to street; and also a 45 degree screened fire escape on the rear of the building, having fireproof openings along the course thereof, extending from the top story (with gooseneck to roof) to the yard; with EGRESS from the termination of the fire escape by means of wooden stairs to cellar and through cellar to street; by means of a connection at the 2nd story balcony to roof of extension of the building to the north and also by means of an opening, at the yard level, to the building to the south; ROOFS of adjoining buildings, to north, five stories lower; to south, three stories lower; and

WHEREAS, petitioner contends that a similar order, relative to the fire escape on the front of the building was acted upon by the board of review of the fire department, and a modification granted, accepting the same as long as the occupancy of the premises remained practically unchanged; and petitioner contends further that the occupancy is similar to that at the time the modification was granted, and that the existing means of egress are adequate.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 1, only so far as it affects the fireproof passageway, on condition that a fireproof passageway shall be provided and maintained from the termination of the rear fire escape, directly to the street at the front of the building; granted, as to Item No. 2, only so far as it affects the fireproof windows on the course of the fire escape.

617-26-S.

THE RESOLUTION:

(617-25-S)

WHEREAS, William I. Hohauser, for Estey Construction Corp., owner, filed, June 15, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in decision of the superintendent of buildings, affecting premises 245-7-9 West 27th street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, dated May 29, 1925, reads:

"This amendment is disapproved with the following objection:

"7. No window panes should exceed 720 sq. in. in area.";

and

WHEREAS, the building is fireproof, 14 stories in height, 75 ft. by 99 ft. in area. OCCUPIED: 1st story, stores; upper stories, lofts for light manufacturing, approximately 70 persons per story; EQUIPPED with a sprinkler system and a fire alarm signal system; and

WHEREAS, there are openings in the front wall of the building on the 1st, 2nd and 3rd stories of the building, glazed with $\frac{1}{4}$ in. plate glass in fireproof sash and frames; the maximum area of the glass on the 1st story being 6 ft. 6 in. by 8 ft.; on the 2nd story being 5 ft. by 10 ft. and on the 3rd story 3 ft. 6 in. by 5 ft.; and

WHEREAS, petitioner contends that a strict compliance with the labor law as to the area of the glass would destroy the purpose of the three lowest stories and would also affect the architectural appearance of the building.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law and that the petition be and it hereby is granted, only so far as it affects the windows on the street front of the three (3) lower stories, on condition that all openings shall be equipped with metal frames and sash, glazed with polished plate glass not less than $\frac{1}{4}$ in. in thickness, and that the requirements of the labor law shall be complied with in all other respects.

562-25-S.

PETITIONER—Samuel Rosenblum, for John Milender, owner.

SUBJECT—Variation of labor law as cited in orders of fire commissioner.

PREMISES AFFECTED—248-250 Central avenue, Brooklyn.

APPEARANCES—

For Petitioner: Samuel Rosenblum and Mrs. Milender.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Negative	0
Absent: Fire Chief Kenlon.....	1

THE RESOLUTION:

(562-25-S)

WHEREAS, Samuel Rosenblum, for John Milender, owner, filed, June 1, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in two orders of the fire commissioner, affecting premises 248-50 Central avenue, Borough of Brooklyn; and

WHEREAS, the orders of the fire commissioner, both dated May 8, 1925, read, respectively:

"Order No. 76803-LD—

"1. Provide an interior stairway extending from 1st to 2nd story remote from outside stairway as per Rule 3 of the Board of Standards and Appeals adopted July 29th, 1924."

"Order No. 76804-LD—

"1. Arrange the windows and doors along the exterior stairway northeast end of building to be fireproof, self closing, as per Rule 3 of the Board of Standards and Appeals adopted July 29th, 1924.

"2. Arrange iron bars on windows on 1st story north, east and west sides of building so as to be readily movable or removable from both sides in such a manner as to afford the free and unobstructed use of such windows for purposes of egress as per Section 272 of the Labor Law.";

and

WHEREAS, the building, situated at the rear of the lot, is frame, two stories in height, 39 ft. by 26 ft. in area. OCCUPIED: 1st story, clothing manufacturer, 6 persons. EXITS: An exterior iron stairway 3 ft. 7 in. in width, extending from the 2nd story to the rear yard, with openings along the course thereof, glazed with wire glass; direct EGRESS from the termination of the stairway through the yard to the street; and

WHEREAS, there are bars over the wire doors, on the 1st story, in the north, east and west walls of the building; and

WHEREAS, petitioner proposes to provide, at the front side of the 2nd story, as remote as possible from the existing stairway, an emergency platform with a drop ladder in guides; and in regard to the barred windows, contends that the building is small in area and that the bars are a necessity as a protection against robbery.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and the petition be and it hereby is granted, as to Order No. 76803-LD, on condition that an iron balcony shall be provided at the 2nd window of the south end with fixed iron 60 degree stairs therefrom to yard level; granted, as to Order No. 76804, Item No. 1, and granted, as to Item No. 2, on condition that at least one window in the rear wall shall be provided with hinges and made removable from both sides; granted only so long as conditions as to occupancy and use remain unchanged.

765-25-S.

PETITIONER—Charles B. Meyers, for Bermey Realty Co., Inc., owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—149 West 40th street and 561-565 Seventh avenue, Manhattan.

THE RESOLUTION:

(765-25-S)

WHEREAS, Charles B. Meyers, for Bermey Realty Company, Inc., owner, filed, June 23, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 149 West 40th street and 561-5 Seventh avenue, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered July 14, 1925, reads:

"1. Provide two lawful exits from each floor. Section 270, Subd. 3 of Labor Law.";

and

WHEREAS, the proposed building is fireproof, 21 stories in height, 60 ft. by 59 ft. 3 in. in area; OCCUPIED as offices and 25 per cent factory use; about 45 persons on each

MINUTES

story; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: An interior fireproof stairway, extending from the 1st story to 17th story, enclosed in fireproof partitions with fire doors at openings; a fire tower from ground to roof; ROOFS of adjoining buildings 17 stories lower; and

WHEREAS, the petitioner proposes to erect a 21-story fireproof building, to provide a fire tower opening to each and every story as one means of exit; one interior fireproof enclosed stairway opening to each story up to and including the 17th story as a second means of exit; he claims that each floor above the 17th story is less than 2,500 sq. ft. and is further reduced by the required height-zone setbacks of the street wall, to such an extent as to make it impracticable for renting purposes if he were compelled to install two stairways to the upper four stories; he further claims that the said upper stories will be for office purposes only, and requests the board to permit the construction of this building, as proposed, as there will be no factory occupancy on the four upper stories but they will be provided with a fire tower, giving adequate means of entrance and exit.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and the petition be and it hereby is granted, only so far as it affects the upper stories of the building (18th, 19th, 20th and 21st), on condition that the building shall be not increased in area and that there shall be no manufacturing use of any nature or description above the 17th story; that this portion of the structure shall be reserved exclusively for executive office use; that the interior of the building shall be constructed fireproof and that the requirements of the labor law shall be complied with in all other respects throughout the building; that the standpipe equipment shall be continued throughout the entire building and that the structure shall be sprinklered (100 per cent); that not more than 25 per cent of the building shall be used for manufacturing; that the building shall comply with the requirements of the building zone resolution in all other respects.

THE RESOLUTION:

(41-25-S)

WHEREAS, The Hamilton Press, Inc., owner, filed, January 10, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in order of fire commissioner, affecting premises 58 Stone street, and 91-93 Pearl street, Manhattan; and

WHEREAS, the order of the fire commissioner reads:

"Arrange the fire escape on the Stone Street side of building and openings leading thereto and windows opening on course thereof so that same are in compliance with the provisions of Sec. 273-274 of labor law and rules of Board of Standards and Appeals * * *.

"NOTE: Among defects noted on fire escape are:

"No stairway from lowest balcony to ground. Requires scraping and painting."

and

WHEREAS, the building is non-fireproof, five stories in height, 38 ft. by 73 ft. 6 in. in area; OCCUPIED as a factory building, job printers; about 10 persons on each story; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: An interior non-fireproof stairway, extending from the 1st story to roof, enclosed in fire-resisting partitions with fire doors at openings, a fire escape on the Stone street front of the building, having fireproof openings along the course thereof, extending from top story to the 2nd story, with counterbalanced drop ladder to sidewalk; ROOFS of adjoining building same level at east, 10 ft. higher at west; and

WHEREAS, the petitioner claims under the present exit facilities he empties the building in one minute and 10 seconds at fire drills; that the street, being narrow, the sidewalk less than 6 ft. in width, if compelled to install a counterbalanced stairway, the same would overhang the sidewalk; he requests the board to accept the existing counterbalanced drop ladder as adequate, without change.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law and that the petition be and it hereby is granted, only so far as it affects the egress from the termination of the lowest balcony, on condition that a counterbalanced drop ladder in guides shall be provided on both ends of the lowest balcony on the Stone street front, and that the order shall be complied with in all other respects.

563-25-S.

PETITIONER—William F. Doyle, for Bisjo Realty Corp., owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—263-271 West 38th street, Manhattan.

APPEARANCES—

For Petitioner: William F. Doyle.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners

Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(563-25-S)

WHEREAS, William F. Doyle, for Bisjo Realty Corp., owner, filed, June 1, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in decision of the superintendent of buildings, affecting premises 263-271 West 38th street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, dated May 15, 1925, reads:

"2. All windows must be self-closing, as per Rule 503 of the Industrial Code."

and

WHEREAS, the building is fireproof, 17 stories in height, 102 ft. by 98 ft. in area at 1st story and 102 ft. by 88 ft. in area above. OCCUPIED: 1st story, stores; upper stories, lofts, offices and show rooms and 25 per cent manufacturing; EQUIPPED with a sprinkler system. EXITS: Two interior fireproof stairways, extending from the 1st story to roof, enclosed in fireproof partitions with fire doors at openings; ROOFS of adjoining buildings, to west 130 ft. lower, to east 130 ft. lower; and

WHEREAS, the petitioner contends that the windows on the 38th street front of the building do not constitute an exposure from the opposite premises as the street is 60 ft. wide.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor

MINUTES

law, and the petition be and it hereby is *granted*, only so far as it affects the windows on the front of the building, other than those opening on the passageway, fire tower, or corridor, *on condition* that the labor law requirements shall be complied with in all other respects.

807-25-S.

PETITIONER—Horace Trumbauer, for New York Evening Post, owner.

SUBJECT—Variation of labor law as cited in decisions of superintendent of buildings.

PREMISES AFFECTED—Washington, Carlisle and West streets, Manhattan.

APPEARANCES—

For Petitioner: Frederick R. Ryan and Charles Hawley.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(807-25-S)

WHEREAS, Horace Trumbauer, for N. Y. Evening Post, owner, filed, August 5, 1925, and October 5, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in decisions of the superintendent of buildings, affecting premises 71-75 West street and 108-110 Washington street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, dated August 27, 1925, reads:

"12. All windows in the building should be fireproof to comply with the requirements of Section 264 of the Labor Law and Rule 503 of the Industrial Code."; and

WHEREAS, the decision of the superintendent of buildings, dated September 29, 1925, reads:

"In reply to your application for permission to swing inward the doors to the offices of premises 71-75 West St. and 108-116 Washington St., N. B. Applic. 244-1925, you are advised that the same is hereby denied, as Section 270 of the Labor Law provides that all doors must swing outward."; and

WHEREAS, the building is fireproof, 16 stories in height, 133 ft. 5½ in. by 180 ft. 1 in., irregular in area; to be occupied for factory purposes, about 100 persons on each floor; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Three interior fireproof stairways, extending from the 1st story to the roof, enclosed in fireproof partitions, with fireproof doors at openings; ROOFS of adjoining buildings 13 stories lower at south; and

WHEREAS, the petitioner proposes to use ¼ in. polished plate glass, maximum sizes at 1st story 7 ft. 6 in. by 6 ft., mezzanine story 4 ft. 6 in. by 6 ft., 2nd story 4 ft. 7 in. by 4 ft. 2¾ in., above the 2nd story 4 ft. 7 in. by 3 ft. 2½ in.; and also on all floors above the 2nd story to swing all office doors inwardly instead of outwardly, as required by the labor law; and

WHEREAS, the petitioner claims the basement, 1st and

2nd stories will be the only portion of the building used for manufacturing; also to divide the glass sash by the use of muntins would spoil the architectural appearance, and hereby requests the board to permit the use of sizes of glass proposed; and also the swinging of office doors inwardly; and

WHEREAS, the orders were brought about by the use and operation of the 1st story as a press room, the remainder of the building to be reserved, maintained and used exclusively for executive offices.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, so far as it affects the windows on the three (3) street fronts of the building, *on condition* that all openings shall be equipped with metal frames and sash, glazed with polished plate glass not less than ¼ in. in thickness, and *granted*, so far as it affects the doorways opening on the corridor above the 2nd story, *on condition* that the labor law requirements shall be complied with in all respects within the area operated for industrial purposes.

APPLIANCES SUBMITTED FOR APPROVAL.

1500-24-SA.

PETITIONER—The Smolensky Valve Company, Inc.

SUBJECT—Approval of Smolensky Check Valve.

APPEARANCES—

For Petitioner: S. H. Payne.

ACTION OF BOARD—Petition placed on reserve calendar, subject to approval by the Underwriters Laboratories or some other recognized laboratory.

513-25-SA.

PETITIONER—American Machine & Foundry Company.

SUBJECT—Approval of Rotary Vacuum Pumps.

APPEARANCES—

For Petitioner: Carroll Q. Wright and C. E. Anderson.

ACTION OF BOARD—Petition placed on reserve calendar, pending inspection and report by committee of board.

558-25-SA.

PETITIONER—Globe Automatic Sprinkler Company.

SUBJECT—Approval of Globe Dry Pipe Valve Accelerator.

APPEARANCES—None.

ACTION OF BOARD—Petition laid over pending approval of sprinkler rules.

603-25-SA.

PETITIONER—Cook Electric Company.

SUBJECT—Approval of Cook Electric Fuel Oil Pump.

APPEARANCES—

For Petitioner: E. D. Swanberg.

ACTION OF BOARD—Petition placed on reserve calendar, pending inspection and report by committee of board.

Adjourned, 5:00 p. m.

JAMES O'CONNOR, Secretary.

RULES

FIRE RETARDING RULES

adopted by the Board of Standards and Appeals August 30, 1917; Amended November 1, 1917.

Rule 1. Fire Retarding Materials for Garages, Motor Vehicle Repair Shops and Oil Selling Stations. In garages, motor vehicle repair shops and oil selling stations any material or form of construction shall be deemed fire-retarding within the meaning of §73, subdivision 3, of the building code, that resists the action of flame and heat when subjected to a continuous fire for one hour at an average temperature of seventeen hundred (1700) degrees Fahrenheit without the passage of flame, and with a maximum temperature rise to four hundred (400) degrees Fahrenheit on the side away from the fire. The point at which the temperature of transmitted heat is measured shall be protected from external air and weather conditions.

When the test specimen is in the form of partition construction, the area under test shall be not less than one hundred (100) square feet and least dimension shall be not less than nine (9) feet. When in the form of floor construction, the area under test shall be not less than two hundred (200) square feet and the least dimension shall be not less than fourteen (14) feet.

During the fire, the floor construction shall support the live load for which it is designed, and after the fire shall safely sustain twice the designed live load with a maximum deflection of not more than one two-hundredth ($1/200$) part of the span.

Rule 2. Wood Joisted Floor Construction. Wood joisted floor construction shall be accepted as fire-retarding construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations when the beams are protected on the upper and under sides with the fire-retarding materials specified in rules for floor and ceiling coverings.

Rule 3. Floor Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the upper sides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) Seven-eighths ($7/8$) inch wood underflooring protected with a membrane of two-ply waterproofing covered with not less than two and one-half ($2\frac{1}{2}$) inches of 1:2½:5 concrete or better, reinforced with not less than one-fourth ($1/4$) of one (1) per cent of steel mesh.

(b) Two and one-half ($2\frac{1}{2}$) inches of 1:2:4 concrete applied directly to the top of the joists, with or without temporary support, reinforced with not less than one-fourth of one per cent steel rods, mesh or steel lath, and having the tops of the joists coated with approved waterproof paint or protected by tar paper on the top and on the sides for a distance of three inches from the top. (Amendment, Nov. 1, 1917.)

Rule 4. Ceiling Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the undersides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) One-half ($1/2$) inch plaster boards with pointed joints covered with No. 26 U. S. gauge sheet metal with one (1) inch lapped seams nailed to the wood beams when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are spaced more than sixteen (16) inches on centers;

(b) Two thicknesses of one-quarter ($1/4$) inch asbestos board laid with tight staggered joints and nailed to the beams, when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are more than sixteen (16) inches on centers.

(c) Metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($3/4$) inch thick.

Rule 5. Attachment to Ceiling. Fire-retarding ceilings in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations shall be attached to wood floor beams and girders in such manner as to maintain an air space between the wood beams, and all wood beams shall be seasoned before applying the protective coat.

Rule 6. Openings in Fire-Retarding Floors. Pipes or conduits which pass through floors shall be fitted with metal thimbles and made watertight for a height of three (3) inches above the floor.

Rule 7. Columns. All structural posts and columns in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials accepted in fireproof construction; except that an air space shall not be required around steel or cast iron columns.

Where necessary for protection against mechanical injury, the fire-retarding protection on columns shall be jacketed to a height of five (5) feet from the ground with No. 4 U. S. gauge metal.

Rule 8. Girders. All girders in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials acceptable in fireproof construction; except that an air space need not be provided around steel girders.

Rule 9. Shaft Enclosures. Existing stairways and vertical shafts in non-fireproof business buildings hereafter converted to be used as garages, motor vehicle repair shops or oil selling stations shall be enclosed in fire-retarding partitions continued through the non-fireproof floor construction, and when unfilled wood stud partitions are used, the space between the floor beams shall be fire-stopped with incombustible materials. All openings in such partitions shall be protected with accepted metal-covered fire doors or windows. Wherever necessary for protection against mechanical injury, the partition shall be jacketed to a height of five (5) feet on the garage side with No. 4 U. S. gauge metal. Any one of the following forms of partitions shall be accepted for the enclosure:

(a) Two by four inch wood studs, spaced not more than sixteen (16) inches on centers, covered both sides with metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($3/4$) of an inch thick;

(b) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($7/8$) inch wood sheathing, one-half ($1/2$) inch plaster boards with pointed joints and No. 26 U. S. gauge sheet metal with one-inch lapped seams;

(c) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($7/8$) inch wood sheathing, two thicknesses of one-quarter ($1/4$) inch asbestos boards laid with tight staggered joints and jacketed with No. 16 U. S. gauge metal on the garage side to a height of five (5) feet.

(d) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, filled in solidly between the studs with four inches of approved fireproof materials and covered on both sides with No. 26 U. S. gauge metal;

(e) Existing wood stud, lath and plaster partitions covered on the garage side with No. 26 U. S. gauge sheet metal with one-inch lapped seams.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, October 23, at 2:30 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc. of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

(b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half ($3\frac{1}{2}$) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half ($3\frac{1}{2}$) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half ($\frac{1}{2}$) inch pipe connection and one-half ($\frac{1}{2}$) inch orifice and a bronze ball of proper size, or by a three-quarter ($\frac{3}{4}$) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

(a) For Standard one-half ($\frac{1}{2}$) inch heads—

8 feet in 12 foot bays;

9 feet in 11 foot bays;

10 feet in 10 foot bays;

11 feet in 9 foot bays;

12 feet in 5 to 8 foot bays;

(b) For Conran* one (1) inch heads—

20 feet in 5 to 12 foot bays.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

25 feet in 5 to 12 foot bays.

(d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half ($\frac{1}{2}$) inch head for each $62\frac{1}{2}$ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half ($\frac{1}{2}$) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half ($11\frac{1}{2}$) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half ($11\frac{1}{2}$) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half (1/2) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
3/4 inch	1 head
1 " "	2 heads
1 1/4 " "	3 " "
1 1/2 " "	5 " "
2 " "	10 " "
2 1/2 " "	20 " "
3 " "	36 " "
3 1/2 " "	55 " "
4 " "	80 " "
5 " "	140 " "
6 " "	200 " "
7 " "	300 " "
8 " "	420 " "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
1 1/4 " "	2 heads
1 1/2 " "	3 " "
2 " "	4 " "
2 1/2 " "	6 " "
3 " "	9 " "
4 " "	18 " "
5 " "	34 " "
6 " "	51 " "
7 " "	75 " "
8 " "	105 " "

(c) For Conran* one and one-quarter (1 1/4) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 1/4 inch	1 head
1 1/2 " "	2 heads
2 " "	3 " "
2 1/2 " "	4 " "
3 " "	6 " "
4 " "	12 " "
5 " "	21 " "
6 " "	40 " "
7 " "	60 " "
8 " "	84 " "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end provided a two and one-half (2 1/2) inch pipe does not supply more than sixteen (16) standard one-half (1/2) inch heads in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half (1/2) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter (1 1/4) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the passageway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or lined with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;
- On each floor, if independent floor control valves are used;

And at each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flow tests may be made to determine if the water supplies connections from yard mains to the inside of the building

are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, sufficing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads40
- (b) For Conran* one (1) inch heads10
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads10

Where equipped with an approved quick-opening device, the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads80
- (b) For Conran* one (1) inch heads20
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads12

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads50
- (b) For Conran* one (1) inch heads12
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads8

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half (1½) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before the board—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of the board, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of the board is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

BOARD OF STANDARDS AND APPEALS

WILLIAM E. WALSH, Chairman

Commissioners

HENRY L. CONNELL

JOSEPH FLANAGAN

JOHN GUILFOYLE

FIRE CHIEF JOHN KENLON

JAMES O'CONNOR, *Secretary*

EDWARD V. BARTON, *Chief Clerk*

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board

CONTENTS

This issue of the Bulletin contains, in the order given—

Docket.

Call of Clerk's Calendar.

The Trial Calendar.

Notices in Building Zone Cases.

Special Notice.

Minutes of Special Meeting, October 16, 1925, at 2 p. m.

Minutes of Meeting, October 20, 1925, at 10 a. m.

Minutes of Meeting, October 20, 1925, at 2 p. m.

Rules.

Notice of Public Hearing.

Progress Report.

PUBLIC HEARINGS

Tuesdays, at 10 a. m. and 2 p. m.

Special meetings as published in this Bulletin.

Call of Clerk's Calendar, Tuesdays, at 2 p. m.

All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of the board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The *Clerk's Calendar* consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, October 27, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Wednesday, November 4, 1925, at 2 o'clock.

The *Clerk's Calendar* is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, *Chairman*.

BUILDING ZONE APPLICATIONS.

NOTICE IS HEREBY GIVEN by the board of standards and appeals of a public hearing under the provisions of the building zone resolution, *Tuesday morning, October 27, 1925, at 10 o'clock, in Room 1013, Municipal Building, on the following matters:*

CAL. NO. 225-25-BZ—Application, February 25, 1925, under the building zone resolution, of Thomas O'Rourke Gallagher, applicant, on behalf of Mymaud Construction Co., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises southwest corner of Metropolitan avenue and 125th street, Richmond Hill, Borough of Queens.

CAL. NO. 423-25-BZ—Application, April 20, 1925, under the building zone resolution, of Samuel Schlau, applicant, on behalf of Isabel Burger, owner, to permit in an "F" area district the erection of a building, the area of which is in excess of that permitted in such district; premises 123-02 and 123-08 Rockaway Beach boulevard, Rockaway Park, Borough of Queens.

CAL. NO. 653-25-BZ—Application, June 24, 1925, under the building zone resolution, of John De Hart, applicant, on behalf of Active Holding Co., Inc., owner, to permit

the extension from an unrestricted district into a business district of a proposed garage for the storage of more than five (5) motor vehicles; premises 319-323 East 148th street, The Bronx.

CAL. NO. 626-25-BZ—Application, June 17, 1925, under the building zone resolution, of New York Telephone Company, applicant and owner, to permit in a residence use, C and E area district, the extension in height and area of an existing central telephone exchange building; premises 1421-1437 Ocean avenue and 1060-1068 Kenmore place, Brooklyn.

CAL. NO. 51-25-BZ—Application, January 12, 1925, under the building zone resolution, of 520 Audubon Avenue, Inc., applicant and owner, to permit in a residence district the occupancy and use for business purposes of part of an existing building used for dwellings; premises 540 Audubon avenue, Manhattan.

CAL. NO. 609-25-BZ—Application, June 11, 1925, under the building zone resolution, of Felix A. Muldoon, applicant, on behalf of Socora Realty Construction Co., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises west side of River avenue, 100 ft. south of East 167th street, The Bronx.

CAL. NO. 662-25-BZ—Application, June 25, 1925, under the building zone resolution, of Charles A. Clayton, applicant, on behalf of Josephine Pitbladdo and American Shade Roller Co., owners, to permit in a business district the erection and maintenance of a building to be used as a factory; premises, 239-245 26th street, Brooklyn.

CAL. NO. 754-25-BZ—Application, July 20, 1925, under the building zone resolution, of Robert Tappan, applicant, on behalf of Cord Meyer Development Co., owner, to permit in a residence district the erection and maintenance of a group of twenty-six (26) one-car attached garages for the storage of pleasure motor vehicles as an accessory to private dwellings located within the same block; premises north side of Austin street, bounded by Puritan avenue and Atom place, Forest Hills, Borough of Queens.

CAL. NO. 505-25-BZ—Application, May 13, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Walton Whyte Realty Corp., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises east side of Jerome avenue, 350 ft. south of East 181st street, The Bronx.

WILLIAM E. WALSH, *Chairman.*

Negative 0
Absent 0

THE RESOLUTION:

(442-25-S)

WHEREAS, Ryan & McGahan, owners, filed, April 24, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 10 Ormond place, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated February 28, 1925, reads:

"1. Arrange iron bars on windows on 1st, 2nd and 3rd stories, north, south and east sides of building, so as to be readily movable or removable from both sides in such a manner as to afford the free and unobstructed use of such windows for purposes of egress, as per Sec. 272 of the Labor Law."

and

WHEREAS, the building is non-fireproof, three stories in height, 25 ft. by 100 ft. average in area. OCCUPIED: 1st story, office and shipping room, 14 persons; 2nd story,

manufacturing lace curtains, 9 persons; 3rd story, manufacturing lace curtains, 10 persons. EXITS: Two interior wooden stairways extending from the 1st story to top story (the rear stairway extends to roof); enclosed in fire-retarding partitions with fireproof doors at openings; ROOFS of adjoining buildings about 12 ft. lower at south; and

WHEREAS, the petitioner claims that there are only eight windows in all which are barred, two on north side, 1st story; three at 2nd story and three at 3rd story on the side of the building; he further contends that the exits are adequate, that arranging the bars so as to be removable would not materially add to the exits; and that it affords him protection against burglary.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to the 1st story, on condition that a doorway shall be provided and maintained to the yard at rear of building; granted, as to the 2nd story (south wall), on condition that not less than two (2) windows shall be provided with movable or removable bars; granted, as to the 3rd story, on condition that the center opening in south wall shall be equipped with movable or removable bars; and granted only so long as the occupancy of the building remains unchanged and the height not increased.

464-25-S.

PETITIONER—Samuel Rosenblum, for Max Goldberg.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—45-7 Crosby street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon

Negative 0
Absent 0

THE RESOLUTION:

(464-25-S)

WHEREAS, Samuel Rosenblum, for Max Goldberg, owner, filed, May 1, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 45-7 Crosby street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated March 24, 1925, reads:

"1. Arrange the fire escape on the rear of the building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Section 273 and 274 of the Labor Law. Among the defects noted on this fire escape are the following:

"No 45 degree stairways connecting balconies.

"No stairway from lowest balcony to ground.

"No fireproof passageway to street from the termination of the fire escape.

"No openings 2 ft. by 6 ft. provided to balconies.

"3. Provide an additional means of exit from the cellar, said exit to be located at the (front) west side of building, remote from the existing stairway, in accordance with the provisions of Sec. 271 of the Labor Law."

and

WHEREAS, the building is non-fireproof, seven stories in height, 50 ft. 1 in. by 100 ft. 4 in. in area at 1st story and 50 ft. 1 in. by 90 ft. in area above; OCCUPIED as a tenant factory, 106 persons above the 1st story; EQUIPPED

MINUTES

with a sprinkler system and a fire alarm signal system. EXITS: An interior wooden stairway, extending from the 1st story to roof; enclosed in fire-resisting partitions with fireproof doors at openings; a fire escape on the front of the building, having fireproof openings along the course thereof, extending from 1st story to the top story, with counterbalanced stair to street; and also a 60 degree screened fire escape on the rear of the building, having fireproof openings along the course thereof extending from the main roof to the platform at the roof of the 1st story extension; with EGRESS from the termination of the fire escape by means of a balcony connecting with fire escape on the rear of No. 424 Broome street; ROOFS of adjoining buildings--to north, one story lower; to south, two stories lower; and

WHEREAS, petitioner contends that a similar order in re the rear fire escape was considered by the board of review of the fire department as being complied with when the fire escape was screened to a height of 4 ft. 6 in. and that this has been done; and in re the additional means of exit from the cellar, petitioner proposes to provide an engineer's ladder to the sidewalk at the front of the building.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, ratifying the action of the board of review of October 10, 1918, on condition that the stipulations of said action shall be complied with and in addition thereto that the windows on the course of the fire escape shall be made fireproof, self-closing, and that any well holes in the 2nd story fire escape balcony platform shall be closed up; granted as to Item No. 3, on condition that the stairs, including the soffits from the cellar to the 1st story, shall be fire-retarded with a fireproof self-closing door at the cellar level; that a fixed double rung iron ladder (engineer's ladder) be provided at the front of the cellar to a counterbalanced sidewalk vault covering; granted only so long as conditions otherwise remain substantially unchanged.

468-25-S.
PETITIONER—Sciama, Davis & Company, Inc., for Masro Realty Corporation, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—40-42 West 37th street, Manhattan.

APPEARANCES—

For Petitioner: Rufus Davis.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners	
Flanagan, Guilfoyle and Fire Chief Kenlon	4
Negative	0
Absent: Commissioner Connell	1

THE RESOLUTION:

(468-25-S)

WHEREAS, Sciama, Davis & Company, Inc., for Masro Realty Corporation, owner, filed, May 4, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 40-42 West 37th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated March 24, 1925, reads:

"1. Remove all partitions not built of incombustible material as per Sections 263 and 270 of the Labor Law.";

and
WHEREAS, the building is fireproof, 13 stories in height, 44 ft. by 98 ft. 9 in. in area at 1st story and 44 ft. by 88 ft. 9 in. in area above; OCCUPIED as offices, showroom and 25 per cent manufacturing, approximately 50 persons per story, petitioner occupying the 6th story as a showroom for feathers, 5 persons; EQUIPPED with a

sprinkler system. EXITS: Two interior fireproof stairways extending from the 1st story to roof, each enclosed in fireproof partitions with fire doors at openings; and

WHEREAS, petitioner contends that no manufacturing is done on the premises; that only five persons are employed; that the partitions in question are hard wood, the upper portion being thin glass, which, in the event of fire, would break and offer no obstruction to the sprinkler system, and contends, further, that the partitions do not obstruct the means of egress.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the 6th story, on condition that the enclosing partitions shall be restricted to that of executive offices at the front of the building, for not more than approximately one-half of the front wall, and that these partitions shall be glazed with sheet glass for a distance of not less than 18 in. below the sprinkler heads; granted, as to partition in the rear, covering not more than one-half the width of the building, on condition that the partition shall not exceed a height of 7 ft.

355-25-S.

PETITIONER—George M. Wood, for Robert C. Schock, et al., owners.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—514-516 West 57th street, Manhattan.

APPEARANCES—

For Petitioner: George M. Wood.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE RESOLUTION:

(355-25-S)

WHEREAS, George M. Wood, for Robert C. Schock, et al., owners, filed, April 1, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 514-16 West 57th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated December 13, 1924, reads:

"2. Enclose the interior stairway at front of building serving as a required means of exit, and the landings, platforms and passageways connecting therewith on all sides, with partitions of fire resisting material extending continuously from the cellar to 3 feet above the roof, constructed as per Section 271 of the Labor Law or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law.

"Note:—Among the defects noted on this enclosure are the following:

"Wire glass in windows on all stories 5 feet by 6½ feet, having an area of over 720 square inches on each story single frames contain more than 360 square inches. Doors not self-closing.";

and

WHEREAS, the building is fireproof, six stories in height, 52 ft. by 118 ft. in area; OCCUPIED as a tenant factory; 1st story, repairing motors, 5 persons; 2nd story, repairing motors, 8 persons; 3rd story, storage, 2 persons; 4th story, mfg. automobile tops, 8 persons; 5th story, storage, 5 per-

MINUTES

sons; 6th story, vacant; EQUIPPED with a fire alarm signal system. EXITS: An interior fireproof stairway, extending from the 1st story to top story; enclosed in fireproof partitions with fireproof doors at openings; a fire escape on the west side of the building, having fireproof openings along the course thereof, extending from main roof to the court level; with EGRESS from the termination of the fire escape by means of driveway to street; ROOFS of adjoining buildings—2 stories lower at east; 6 stories higher at south; and

WHEREAS, the petitioner claims there is only one wire glass window in stairhall partition on each story except the 6th story, where no window exists; that the windows on 1st, 2nd and 3rd stories are divided into 9 panes and on the 4th and 5th stories divided into 12 panes, each pane containing 352 square inches; that the windows are in stationary iron frames; he further contends the exit facilities are excellent, no hazard exists, and requests the board to rescind Item No. 2 of Order No. 69998-LD.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the existing wire glass windows on the stairhall, on condition that they shall be equipped with fixed steel sash with metal muntins, no light of which shall exceed 23 in. by 23 in. in area.

THE RESOLUTION:

(374-25-S)

WHEREAS, James W. Byrnes, for Wm. Henne Company, Inc., owner, filed, April 6, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 957-971 Kent avenue (rear), Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated January 28, 1925, reads:

"1. Remove the substandard fire escapes on the west, north and south sides of the building or reconstruct same to conform to Sec. 274 of the Labor Law as per Rule 3, Board of Standards and Appeals, adopted May 9, 1924. Among the defects noted are the following:

"1. Windows on course not fireproof, self-closing.
"2. No drop ladder in guides from lowest balcony to ground."

and

WHEREAS, the building is non-fireproof, four stories in height, 132 ft. by 190 ft. (irregular) in area; OCCUPIED as a shoe factory, 270 persons above the 1st story; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: An interior fireproof stairway, extending from the 1st story to the top story, enclosed in fireproof partitions, with fire doors at the openings; a wooden unenclosed stairway extending from the 1st to top story; horizontal openings on each story protected with self-closing fireproof doors; and also four substandard fire escapes; and

WHEREAS, petitioner proposes to furnish the required drop ladders in guides, and contends hardship would result if compelled to fireproof the windows along the course of the fire escape, in view of the fact that the premises are supplied with the required means of exit and that the fire escapes simply afford an additional means of exit.

Resolved, that the order of the fire commissioner be and it hereby is affirmed, and the petition be and it hereby is denied.

461-25-S.

PETITIONER—Springsteen & Goldhammer, for Halbaer Realty Corp., owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—251-255 West 39th street, Manhattan.

APPEARANCES—

For Petitioner: Albert Goldhammer.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE RESOLUTION:

(461-25-S)

WHEREAS, Springsteen & Goldhammer, for Halbaer Realty Corporation, owner, filed, April 30, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 251-255 West 39th street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered April 16, 1925, reads:

"13. All windows, including show windows at 1st and 2nd floors, should have panes not exceeding 720 square inches and not more than 48 inches in any dimension. Rule 503 of Industrial Code, Section 264 of Labor Law."

and

WHEREAS, the building is fireproof, 17 stories in height, 73 ft. 6 in. by 88 ft. 10 in. in area. OCCUPIED: 1st story and mezzanine, stores; upper stories, tenant factory, 90 persons per story; and EQUIPPED with a sprinkler system and a fire alarm signal system; and

WHEREAS, there are openings in the street wall of the building on the 1st and 2nd stories, glazed with 1/4 in. thick plate glass, the maximum area of the glass on the 1st story being 8 ft. 4 in. by 10 ft. and on the 2nd story being 9 ft. by 6 ft. 6 in.; and

WHEREAS, petitioner contends that a strict compliance with the labor law as to the area of the glass would destroy the purpose of the stories in question and, also, would detract from the architectural effect of the building.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the windows on the street front of the three (3) lower stories, on condition that all openings shall be equipped with metal frames and sash, glazed with polished plate glass not less than 1/4 in. in thickness, and that the requirements of the labor law shall be complied with in all other respects.

THE RESOLUTION:

(465-25-S)

WHEREAS, Jean Jeume, for Charles Burkelman, owner, filed, May 2, 1925, a petition with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 26-34 Sullivan street and 47-49 Watts street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 14, 1925, reads:

"1. Extend the interior stairway at the north side in Building No. 26-28 Sullivan Street, to the roof, as per Sec. 271 of the Labor Law.

"2. Extend the interior stairway at the north side in building No. 26-28 Sullivan Street, from the 2nd story to the 1st story and provide and maintain a continuous safe and unobstructed passageway of at least the same width as the stairway leading to the street from the termination of said stairway as per Sec. 271 of the Labor Law.

"3. Enclose the interior stairway at the east side of building No. 47-9 Watts Street serving as a required means of exit and the landings, platforms and passageways connecting therewith on all sides with partitions of fire resisting material extending from 1st story to and including the underside of the roof beams as per Sec. 271 of the Labor Law and Rule 1, Board of Standards and Appeals, adopted July 29, 1924.";

and

WHEREAS, the premises consist of an irregular plot of ground, having a frontage of 63 ft. 9 in. on Watts street and 79 ft. 2 in. on Sullivan street, upon which are located three non-fireproof buildings, two facing on Sullivan street being four stories in height and the building fronting on Watts street being five stories in height. OCCUPIED: 1st floor, stores, 6 persons; 2nd floor, printing, 33 persons; 3rd floor, statuary, 15 persons; 4th floor, printing and machinery samples, 25 persons; and 5th floor, leather belt, 6 persons; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Two interior wooden stairways, one leading to Sullivan street and one leading to Watts street, each extending from the 1st to top story, enclosed in wooden partitions with wooden doors at openings; a horizontal opening on each story of the Sullivan street premises leading to a fire escape on premises to the south; a fire escape, with fireproof windows along the course thereof, on the Watts street front of the premises extending from roof to 1st story balcony, with drop ladder in guides to street; ROOFS of adjoining buildings are one story lower; and

WHEREAS, petitioner contends, in view of the light occupancy, that the existing means of exit are adequate.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, ratifying the action of the board of review of fire department of May 18, 1920, only so far as it affects the stairs to the roof, and denied as to Items No. 2 and 3.

THE RESOLUTION:

(440-25-S)

WHEREAS, Julius Lewin & Son, for Eleanore Walsh, owner, filed, April 24, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 352 East 76th street, Manhattan; and

WHEREAS, the order, No. 72181-LD, of the fire commissioner, dated February 13, 1925, reads:

"1. Arrange bars on windows on rear and west side of building, so as to be readily movable or removable from both sides in such a manner as to afford the free and unobstructed use of such windows for purposes of egress, as per Section 272 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, two stories in height, 25 ft. by 102 ft. in area at 1st story and 25 ft. by 97 ft. in area above. OCCUPIED: 1st story, printing shop, 3 persons; 2nd story, furniture shop, 5 persons. EXITS: An interior wooden stairway, extending from the 1st story to 2nd story, enclosed in stud and plaster partitions with wooden doors at openings; a substandard fire escape on the rear of the building, having fireproof openings along the course thereof, extending from roof to the ground, with EGRESS from the termination of the fire escape by means of a gate in fence to yard adjoining at south; ROOFS of adjoining buildings—about 10 ft. higher at east and 25 ft. higher at west; and

WHEREAS, the petitioner claims there are six windows on the west side and four windows at rear which are barred to prevent burglary; he further contends that all other fire department orders have been complied with; that the exits are adequate, and requests the board to relieve him of complying with fire department Order No. 72181-LD.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that one hinged iron barred gate or fireproof door shall be provided, same to be not less than 3 ft. by 6 ft. 6 in. at the rear of both the 1st and 2nd stories.

THE RESOLUTION:

(448-25-S)

WHEREAS, M. & L. Hess, Inc., for Franklin C. Hoyt and Howard C. Sherwood, trustees, filed, April 27, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in order of the fire commissioner, affecting premises 26 West 20th street, Manhattan; and

WHEREAS, the order of the fire commissioner reads:

"1. Arrange the fire escape on the south side of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Sec. 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with the requirements of Sec. 271 of Labor Law.

"NOTE: Among the defects noted on this fire escape are the following: Counterbalanced stairway not in proper working order and obstructed by doors of wood shed in yard. No fireproof passageway to street, from termination in the yard. Floor slats of balconies are not cut off where same extend over stairways connecting balconies on all stories. Stairway not continued to roof.";

and

WHEREAS, the building is non-fireproof, five stories in height, 28 ft. by 92 ft. in area; OCCUPIED as a tenant factory, 30 persons on each story; EQUIPPED with a fire alarm signal system. EXITS: An interior non-fireproof stairway, extending from the 1st story to top story, enclosed in fire-retarding partitions, with fireproof doors at openings; a fire escape on rear of the building, extending from the roof to the yard level, with fireproof windows along course; with no EGRESS from the termination of the fire escape; ROOFS of adjoining buildings—10 ft. lower at east, 11 ft. above at west; and

WHEREAS, the petitioner proposes to cut a door opening through the brick fence at east side to adjoining yard, and claims that all other defects have been complied with and, on account of the small occupancy, requests the board to accept exits as proposed to be adequate.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the egress from termination of fire escape at the rear, *on condition* that a clear opening shall be provided in the brick wall of yard, not less than 3 ft. wide by 6 ft. 6 in. in height, leading to the adjoining two (2) yards to the east, egress therefrom by means of a regulation fire escape, or through premises direct to street, and that the order shall be complied with in all other respects.

THE RESOLUTION:

(469-25-S)

WHEREAS, Samuel Rosenblum, for Silk Realty Company, owner, filed, May 4, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the

labor law, as cited in an order of the fire commissioner, affecting premises 692-4 Broadway and 388 Lafayette street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated August 26, 1924, reads:

"1. Provide passageways having an unobstructed width of at least three feet throughout their length leading directly to both required means of exit on 2nd, 3rd, 4th, 5th, 10th and 11th stories, also on the 8th story, or reduce the number of persons on the 8th story to 45 persons as stipulated in resolution of the Board of Standards and Appeals, known as Calendar No. 649-23-S, as per Section 272 of the Labor Law.";

and

WHEREAS, the building is fireproof, 12 stories in height, having a frontage of 48 ft. on Broadway, 74 ft. on Lafayette street and 275 ft. on East 4th street; OCCUPIED as a tenant factory, 737 persons above the 1st story; the occupancy of the 8th story being 49 persons; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Two interior fireproof stairways, extending from the 1st story to roof; enclosed in fireproof partitions with fire doors at openings; a scissors type 45 degree fire escape on the front of the building, having fireproof openings along the course thereof, extending from the roof to the 2nd story balcony; with EGRESS from the termination of the fire escape by means of a counterbalanced stair to street; ROOFS of adjoining buildings are 6 and 3 stories lower; and

WHEREAS, petitioner contends that the conditions have been remedied on the 5th and 11th stories, the order no longer applying thereto; petitioner proposes to provide an independent hallway on the 3rd story, similar to the one now provided on the 10th story, leading to the fire escape; and contends that there will then be available two means of egress to exits from all lofts on every story; in re the 8th story, petitioner requests that the present occupancy of 49 persons be accepted, the occupancy having been limited to 45 persons under Cal. No. 649-23-S.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, so far as it affects the 2nd, 3rd, 4th, 8th and 10th stories, *on condition* that an enclosed fireproof passageway shall be provided at center of building to the fire escape on the East 4th street side of the building; that the railing of the balconies and connecting stairs on the outside shall be increased to 4 ft. 6 in. in height; that 8 in. exit signs with red letters shall be provided and permanently fixed in the corridor or hall indicating the direction of exit from the lofts on each story, except that above passageway may be omitted on any floor where the subdividing partition between the tenants is arranged to allow direct egress to fire escape on 4th street side; occupancy not to exceed the allowance of the interior stairways and sprinkler systems.

MINUTES

with the board of standards and appeals, for variation from the requirements of the labor law, as cited in order of the fire commissioner, affecting premises 237-9 Lafayette street, Manhattan; and

WHEREAS, the order of the fire commissioner reads:

"Arrange the exterior screened stairway at rear of building and the openings leading thereto so that same are in compliance with the provisions of section 268 of the labor law, or carry out a proper alternative method of complying with the requirements of section 271 of the labor law.";

and

WHEREAS, the building is fireproof, 12 stories in height, 50 ft. 2 in. by 96 ft. in area at the 1st story and 50 ft. 2 in. by 90 ft. in area above; OCCUPIED as a tenant factory, not exceeding 42 persons on each story; EQUIPPED with a sprinkler system. EXITS: An interior fireproof stairway, extending from the 1st story to roof, enclosed in fireproof partitions with fireproof doors at openings; an exterior screened stairway on the rear of the building having fireproof openings along the course thereof, extending from main roof to the roof of 1st story extension, with EGRESS from the termination of the exterior screened stairway by means of a fireproof passageway connecting with the interior stairway, thence through entrance hall to street; ROOFS of adjoining buildings—7 stories lower at south and 6 stories lower at north; and

WHEREAS, the petitioner claims the fire department holds the building is not provided with two separate and independent means of exits, in that the fireproof passageway leading from one means of exit (the exterior stairway) connects with the other means of exit (the interior stairway); and

WHEREAS, the petitioner contends this building was erected in 1910 under approved plans conforming to the labor law; that this matter has never been complained of before, while other orders have been filed and complied with; he further contends the exits are adequate, and requests the same to be accepted without change.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects egress from termination of lowest landing, *on condition* that an unpierced fireproof mezzanine passageway shall be maintained (in the 1st story) from the rear exterior stairway connecting to the main hall at the front of building, with egress therefrom direct to the street; that the occupancy of the building shall be limited to the legal capacity of the interior stairway, with the allowances for the approved sprinkler system.

THE RESOLUTION:

(500-25-S)

WHEREAS, Croker National Fire Prevention Engineering Company, for C. Oppenheimer, owner, filed, May 13, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 873

Sixth avenue, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated March 18, 1925, reads:

"1. Arrange the fire escape on the front of the building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of the Board of Standards and Appeals, or carry out a proper alternative method of complying with the requirements of Sec. 271 of the Labor Law. Among the defects noted on this fire escape are the following:

"Windows on course not fireproof nor self-closing.

"No counterbalanced stairway from the lowest balcony to ground.

"3. Extend the interior stairway at the south side of building to the roof as per Sec. 271 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, four stories in height, 25 ft. by 55 ft. in area. OCCUPIED: 1st floor, laundry, 12 persons; 2nd floor, printer, 2 persons, and employment office, 3 persons; 3rd floor, tailors, 12 persons; 4th floor, silk embroidering, 12 persons. EXITS: An interior wooden stairway, extending from the 1st story to the top story; enclosed in wood lath and plaster partitions, with wooden doors at openings; a fire escape on the front of the building, having unprotected openings along the course thereof, extending from the top story to the 2nd story balcony; with proposed EGRESS from the termination of the fire escape by means of a counterbalanced drop ladder to street; ROOFS of adjoining buildings—to north, same level; to south, 3 ft. lower; and

WHEREAS, petitioner proposes to fireproof the openings along the course of the fire escape, and requests the acceptance of the counterbalanced drop ladder, in lieu of the counterbalanced stairway, owing to structural conditions, and also as it would obstruct the show windows; and in re Item No. 3, proposes to install, in an accessible position, a double rung iron ladder leading to scuttle in the roof.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, as to Item No. 1, only so far as it affects the counterbalanced stairs, *on condition* that a counterbalanced drop ladder in guides shall be provided, and that Item 1 shall be complied with in all other respects; as to Item 3, *on condition* that fixed double-rung iron ladder shall be provided from the top story stairhall enclosure to scuttle direct to roof; and that the occupancy above 1st floor shall not exceed twenty-five (25) persons.

THE RESOLUTION:

(430-25-S)

WHEREAS, Samuel Rosenblum, for Rapid Delivery Express Co., lessee, filed, April 21, 1925, a petition, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 365-7 Canal street, Manhattan; and

MINUTES

WHEREAS, the order of the fire commissioner, dated March 24, 1925, reads:

"1. Arrange the fire escape on the rear of building and the openings leading thereto and the windows opening on the course thereof so that the same are in compliance with the provisions of Section 273 and 274 of the Labor Law and the Rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law.

"Among the defects noted on this fire escape are the following:

"No stairway from lowest balcony to ground.

"No safe passageway to the street from the termination."

and

WHEREAS, the building is non-fireproof, five stories in height, 42 ft. by 80 ft. 10 in. in area; OCCUPIED as a tenant factory, 44 persons above the 1st story; 5th story now vacant; EQUIPPED with an interior automatic fire alarm signal system. EXITS: An interior wooden stairway extending from entrance door to roof, enclosed in fire-resisting partitions with fireproof doors at openings; a fire escape on the rear of the building extending from main roof to roof of 1st story extension, with EGRESS from the termination of fire escape by means of iron stairway to roof of one-story extension of building adjoining at west; ROOFS of adjoining buildings are 7 ft. lower at east and 3 stories lower at west; and

WHEREAS, the petitioner claims he has obtained the consent from the lessee of adjoining building at west to use his property as a means of egress to the street, and further contends the exits are adequate.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted on condition* that the requirements of the labor law affecting rear fire escapes shall be complied with in all respects other than egress from termination of passageway; that the fixed iron stairs shall be provided from lowest balcony to the roof of the extension at west, the ceiling of said extension to be fire-retarded in accordance with the rules of the board of standards and appeals, with egress therefrom through three (3) plain glass windows and one door opening in adjoining building, leading to street; and that the occupancy of the building shall not exceed the allowable capacity of the interior legal stairway.

1525-24-S.

PETITIONER—F. P. Keniston, for 31st St. & 4th Ave. Corp., lessee.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—107 East 31st street, Manhattan.

APPEARANCES—None.

ACTION OF BOARD—Petition dismissed for lack of prosecution.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle	4
Negative	0
Absent: Fire Chief Kenlon	1

THE RESOLUTION:

(1525-24-S)

WHEREAS, F. P. Keniston, for 31st Street & 4th Avenue Corp., owner, filed, December 29, 1924, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 107 East 31st street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered December 2, 1924, reads:

"1. Proposed fire escape is not remote from interior stairway. Section 271 of Labor Law.";

and

WHEREAS, the building is non-fireproof, five stories in height, 22 ft. by 99 ft. 8 in. in area at 1st story and 22 ft. by 88 ft. 8 in. in area above. OCCUPIED: 1st story, stores; upper stories, tenant factory, 41 persons above the 1st story. EXITS: An interior fireproof stairway extending from 1st story to roof, enclosed in fire-resisting partitions with fireproof doors at openings; ROOFS of adjoining buildings—to west, 60 ft. higher; to east, 20 ft. higher; and

WHEREAS, petitioner contends that openings had been provided on each story, affording egress to the fire escape on the building to the west, and states that it is no longer possible to use this mode of egress, and proposes to install a fire escape on the front of the building, contending that practical difficulties prevent its erection upon the rear of the premises; and

WHEREAS, a report of representative of fire prevention bureau states that a vacate order has been executed by the fire commissioner and complied with and that there is no factory in building.

Resolved, that the petition be and it hereby is *dismissed*.

718-18-S.

PETITIONER—William C. Sommerfeld, for Lazarus Levy, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—17-23 East Broadway, Manhattan.

APPEARANCES—

For Petitioner: William C. Sommerfeld.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle...	4
Negative	0
Absent: Fire Chief Kenlon	1

THE RESOLUTION:

(718-18-S)

WHEREAS, William C. Sommerfeld, architect, substituted for Abram J. Halprin, attorney, on behalf of Lazarus Levy, owner, filed, February 28, 1918, with the board of standards and appeals, for variation of the requirements of the labor law, to permit an occupancy allowance of twenty persons in the third story for each eighteen inches width of stairway serving such story; premises 17-23 East Broadway, Manhattan; and

WHEREAS, it appears that the building is non-fireproof, seven stories high, 47 feet by 95 feet in area, located on a corner, with one interior stairway near the rear, 3 feet 2 inches wide, extending from first story to roof, enclosed in approved fire-resisting partitions, leading to street in first story through a hallway similarly enclosed; that there is a fire escape at the center of the East Broadway front which is being reconstructed from third floor to street so as to conform with the requirements of the labor law, relating to outside screened stairways; that there is a fire escape at the southerly end of the Catherine street front which is also to be reconstructed in a manner similar to that described for the other fire escape; that the building is equipped with an interior fire alarm signal system and occupied as a tenant factory, with not more than thirty persons in any one story, except the third, in which eighty-three persons are employed; and requests 83 persons on each floor.

WHEREAS, a statement from the inspector of the bureau of fire prevention indicates that on the basis of the installation of a wet sprinkler system in conjunction with the fire alarm signal system, the fire drills and the fire

MINUTES

resisting enclosure of the existing stairway, an occupancy of 78 persons per story could be permitted;

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted on condition* that the East Broadway and Catherine street fire escapes shall be arranged to conform with rules of the board of standards and appeals, permitting existing stairways to remain; that wet automatic sprinkler system, fire alarm system and fire drills shall be maintained in accordance with the rules of the board; and that the occupancy on each floor shall not exceed the legal allowances of the interior stairway plus the sprinkler system and fire alarm system.

321-25-S.

PETITIONER—William F. Doyle, for Flosan Holding Corp., lessee.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—232-234 West 37th street, Manhattan.

APPEARANCES—

For Petitioner: William F. Doyle.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners

Connell, Flanagan and Guilfoyle 4

Negative 0

Absent: Fire Chief Kenlon 1

THE RESOLUTION:

WHEREAS, William F. Doyle, for Flosan Holding Corp., lessee, filed, March 25, 1925, a petition with the Board of Standards and Appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 232-4 West 37th street, Manhattan, and

WHEREAS, the decision of the superintendent of buildings, rendered March 13th, 1925, reads:

"2—Egress from the termination of fire escape on rear must be through a fireproof passage or an open court leading direct to street.";

and

WHEREAS, the building is non-fireproof, four stories and pent house in height, 37 feet 6 inches by 98 feet 9 inches in area; OCCUPIED as a factory building, 76 persons above the first story; EQUIPPED with a sprinkler system; EXITS: an interior wooden stairway extending from entrance door to roof, enclosed in fire retarding partitions with fireproof doors at openings; a fire escape on the rear of the building, extending from roof to roof of first story extension, with EGRESS from the termination of fire escape by returning up fire escape stairs to third story balcony, where a connection is made with the rear outside fireproof stairs of building adjoining at west; ROOFS of adjoining buildings are 60 feet higher at west and 108 feet higher at east; and

WHEREAS, the petitioner claims there are safe means of egress to the street from third story rear fire escape balcony;

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects egress from termination of fire escape, *on condition* that the lowest balcony shall be connected to the exterior stairway of building immediately adjoining to the west; and that all the pivot windows on course of this fire escape shall be made stationary or self-closing and arranged so as not to obstruct passageway on fire escapes.

Adjourned 4.30 p. m.

JAMES J. O'CONNOR, Secretary.

Negative: Commissioner Guilfoyle..... 1
Absent 0

THE RESOLUTION:

(589-25-A)

WHEREAS, Foster, LaGuardia & Cutler, for Mario Baretti, owner, filed, June 8, 1925, an appeal, with the board of standards and appeals, from an order of the superintendent of buildings, affecting premises 65 Skillman avenue, Borough of Brooklyn; and

WHEREAS, the order of the superintendent of buildings, dated May 18, 1925, reads:

"You will please take notice that there exists a violation of the Building Code at the premises hereinafter described, in that the statement regarding the height of this building is not correct, as it is 29 ft. 6 in. in height instead of 24 ft. 8 in., as stated in the permit—in violation of Art. 22, Sec. 470 of the Building Code.

"You are required to stop work at once and comply with the law.

"(Frame building with proposed change to be used in part as garage, exceeding 25 ft. in height and 2 families above.)";

and

WHEREAS, the building is of frame construction, two stories and basement (29½ ft.) in height, 16 ft. 8 in. by 63 ft. in area at basement story and 16 ft. 8 in. by 35 ft. in area above. OCCUPIED: Basement story, garage for five cars; 1st story, one family; 2nd story, one family; and

WHEREAS, the appellant proposes to erect a brick enclosure around interior stairs from cellar to 1st story; to fire-retard ceiling of cellar and garage with 1½ in. approved plaster boards and No. 26 U. S. gauge metal; and

WHEREAS, the appellant claims the building is 70 per cent masonry, due to the new one-story brick extension, giving a greater degree of fire protection; he further contends the height of the building only exceeds the restricted height by 4 ft. 6 in., and requests the board to set aside the order from the superintendent of buildings.

Resolved, that the order of the superintendent of buildings be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the garage floor shall be constructed of reinforced concrete; that the side walls throughout 1st story garage area shall be built of brick; that the ceiling shall be fire-retarded in accordance with the rules of the board of standards and appeals; that the stairhall shall be enclosed with not less than 4 in. fireproof partition, leading directly to the street, with not more than one opening therein, at the rear of 1st story hall, said opening to be provided with self-closing fireproof door, in addition to a fireproof door at head of stairs to the basement story; that the opening at rear of building, 1st story, shall not exceed a width of 3 ft. 6 in. and a height of 6 ft. 6 in.; that an opening shall be provided in fence from rear yard to adjoining yard, and that the occupancy of garage shall be limited to 1st story and shall not exceed four (4) motor vehicles, all the property of the owner and occupant of the premises, used in the conduct of his business, comprising three (3) commercial trucks and one (1) pleasure car; that there shall be no gasoline storage equipment installed or maintained on the premises; and *granted* only so long as use and occupancy shall be maintained by the owner and occupant of the premises.

590-25-A.

APPELLANT—Samuel Rosenblum, for S. Langsdorf & Co., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—72-78 Spring street, Manhattan.

APPEARANCES—

For Appellant: Samuel Rosenblum.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon

Negative 5

Absent 0

THE RESOLUTION:

(590-25-A)

WHEREAS, Samuel Rosenblum, for S. Langsdorf & Company, lessee, filed, June 8, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 72-8 Spring street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated June 1, 1925, reads:

"Order No. 29750-LC—

"1. Arrange sprinkler heads with properly installed baffles so that there will be one such head in centre of aisle opposite each section of storage racks in stockroom on 12th story. Section 235-13-g, Chapter 10, Code of Ordinances.";

and

WHEREAS, the building is fireproof, 12 stories in height, 100 ft. 1 in. by 99 ft. 11 in., irregular in area. OCCUPIED: 1st story, vacant; 2nd story, salesroom, 20 persons; 3rd story, celluloid salesroom, 10 persons; 4th story, offices, 25 persons; 5th story, wood case department, 24 persons; 6th story, celluloid manufacturing, 29 persons; 7th story, wood-working department, 10 persons; 8th story, celluloid engraving, paper box department, 28 persons; 9th story, celluloid novelty manufacturing, 30 persons; 10th story, fitting department, 20 persons; 11th story, shipping leather goods, 15 persons; 12th story, stock room, 7 persons; and

WHEREAS, the appellant claims the building is equipped with adequate exit facilities; an automatic sprinkler system with gravity and pressure tanks; the premises have been operating regularly under fire department permits; to comply with the fire department order would mean a large unnecessary expense; the present arrangement will give better service than that required, and requests the board to accept the present sprinkler equipment as adequate without change.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the 12th story, *on condition* that the sprinkler equipment, as now installed, shall comply with the rules in all respects; that the existing stacks shall not be increased in number or area and shall not exceed a height of 8 ft. from floor level; that the shelving shall be constructed of open slatting; that the stock storage stacks shall be open at the top; and that the storage shall be limited and restricted to finished stock, maintained in packing cartons.

627-25-A.

APPELLANT—Patrick J. Murray, for Sarahann Delamater, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—508-510 Broome street, Manhattan.

APPEARANCES—

For Appellant: Patrick J. Murray and John Fitzgerald.

For Administration: Inspector Maher of fire department.

THE RESOLUTION:

(627-25-A)

WHEREAS, Patrick J. Murray, for Sarshann Delamater, owner, filed, June 17, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 508-510 Broome street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, No. 77683-F, dated May 22, 1925, reads:

"Install a standpipe system, etc.";

and

WHEREAS, the building is non-fireproof, seven stories in height, 41 ft. 5 in. by 80 ft., irregular in area. OCCUPIED: 1st story, store, 4 persons; 2nd story, printer, 6 persons; 3rd story, tag manufacturing, 10 persons; 4th story, embroidery manufacturing, 15 persons; 5th story, patent medicines and leather goods manufacturing, 11 persons; 6th story, manufacturing of cosmetics, 10 persons; 7th story, glass cutting, 12 persons; and

WHEREAS, the appellant claims the building is divided by a fire wall into two sections of 1,368 sq. ft. and 782 sq. ft. floor area; the height of the building being only 86 ft. 10 in.; EQUIPPED with approved fire alarm system; required fire drills are held; fire extinguishers and fire pails are provided; under such conditions he requests the board to rescind fire department Order No. 77683, requiring standpipes.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, so long as the building is sub-divided by a wall of approved masonry, any horizontal openings therein to be protected with self-closing fireproof door, *on condition* and only so long as building otherwise complies with labor law in all other respects; and *granted* only so long as occupancy and use remain substantially unchanged.

THE RESOLUTION:

(629-25-A)

WHEREAS, the Ballard Oil Equipment Co., for Prof. Alex. Haring, owner, filed, June 17, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 2489 Sedgwick avenue, Borough of The Bronx; and

WHEREAS, the order of the fire commissioner, No. 29743-LC, dated June 1, 1925, reads:

"1. Provide a hydrostatic test of not less than 150 pounds per sq. in. for all fuel oil carrying piping of a normal working pressure of less than 100 lbs., as per Rule 8, Sec. 3 of the Fuel Oil Rules.

"2. Expose buried fuel oil storage tank to view so that a proper hydrostatic pressure test may be made by a representative of the Fire Commissioner as per Rule 7, Sec. L, 1-A of the Fuel Oil Rules.";

and

WHEREAS, the building is of frame construction, 2½ stories in height, 29 ft. by 39 ft. in area; OCCUPIED as a residence; and

WHEREAS, the appellant claims the fuel oil installation was made under the rules of 1922; that it also meets the requirements of the present rules except the tests were not made in the presence of a fire department representative; that a sworn statement has been filed in the fire department to the effect "that a tank shop test met the requirements"; standard piping was used, and he requests the board to accept the fuel oil installation without charge as complying with the requirements of the board.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Item 1, *on condition* that an affidavit of test shall be filed by installer with the fire department, and that all piping shall be of standard wrought iron throughout the fuel oil equipment; and as to Item 2, *on condition* that certificate of factory test shall be filed with fire department; and *on further condition* that the equipment of fuel oil burning installation shall comply with the fuel oil rules in all other respects.

THE RESOLUTION:

(519-25-A)

WHEREAS, Alexander Caldwell, owner, filed, May 19, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 522 Timpson place, The Bronx; and

WHEREAS, the order of the fire commissioner reads:

"Discontinue the maintenance of a garage on these premises.";

and

WHEREAS, the building is of frame construction, three (3) stories in height, 22 ft. by 50 ft. in area. OCCUPIED: 1st story, business garage for five (5) cars; 2nd story, 1 family; 3rd story, 1 family; and

WHEREAS, the board denied an appeal from a similar order on March 30, 1920, on these premises, under Cal. No. 162-20-A; and

WHEREAS, the appellant claims conditions have been changed since the last appeal; the side walls and ceiling of garage are fire-retarded in accordance with the rules of the board; entrance to the upper floors is separated from the garage; exterior stairway at rear leads to an alley which leads to the street; doors and windows of garage are provided with wire glass; there are only two adults living on each of the 2nd and 3rd stories; he has filed Certificate of Occupancy No. 618 of 1924 permitting present occupancy; and he requests the board to accept the present occupancy and rescind fire department Order No. 29676-LC to discontinue the use as a garage.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the side wall and ceiling of garage area on 1st story shall be fire-retarded in accordance with the rules of the board of standards and appeals; that the sides and soffits of stairs, 1st story, shall be enclosed in fire-retarded material and shall lead directly to street with no opening between stairhall and garage area; that there shall be an exit maintained at the rear of garage or 1st story to the yard, not exceeding a width of 3 ft. 6 in. by 6 ft. 6 in. in height; that an exterior means of egress additional to interior stairway shall be provided and maintained on rear of building from all floors; that there shall be no gasoline storage equipment maintained on the premises; that there shall be no open flame, heating apparatus or appliance maintained within garage area; and that the occupancy of the garage shall be limited to two (2) automobiles of pleasure-car type, restricted to the use and ownership of the owner or occupant of the living quarters on the premises above.

THE RESOLUTION:

(547-25-A)

WHEREAS, John J. Gilmartin, for North Ward Realty Company, owner, filed, May 27, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 45-49 John street and 1-5 Dutch street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 70611-F, reads:

"2. Provide iron shutters at all openings in the exterior wall above the 1st story, which are distant in a direct line less than 30 ft. from any opening in any other building and not in the same plane with said openings and which are not more than 50 ft. above a neighboring roof at north, east and west sides of building, also at north and south walls of court at west side of building, or other approved protection, as per sec. 375, art. 18, ch. 5 of Code of Ordinances.";

and

WHEREAS, the building is fireproof, 12 stories in height, 75 ft. by 113 ft. in area; OCCUPIED for office purposes, about 50 persons on each story; and

WHEREAS, the appellant claims there are 40 windows in north wall, 198 windows in east wall, 25 windows in west wall, 20 windows in south court wall, 40 windows in east court wall and 16 windows in north court wall of the building affected by fire department order; he contends the building is on the corner, facing two streets; also that the windows in the side walls are within reach of a fire stream from the street and, in view of such facts, he requests the board to modify the fire department order, No. 70611-F, requiring iron shutters.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the openings in westerly gable wall more than two stories above the adjoining four-story structure on John street, and so far as it affects the openings in northerly gable wall more than two stories above the adjoining structure to the north and openings in the easterly wall, *on condition* that all windows in the northerly, easterly and southerly walls of the interior court within the requirements shall be equipped with fireproof frames and sash, glazed with wire glass; and *granted* so long as occupancy and use remain substantially unchanged.

1431-24-A.

APPELLANT—Augustus Misch, for W. J. Durr, owner.

SUBJECT—Request for extension of permit—appeal from decision of fire commissioner.

PREMISES AFFECTED—3294 Hull avenue, The Bronx.

APPEARANCES—

For Appellant: Anthony J. Ware.

ACTION OF BOARD—Appeal reopened and another ninety-day permit granted.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND EXTEND PERMIT FOR 90 DAYS—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle....	4
Negative	0
Absent: Fire Chief Kenlon.....	1

THE RESOLUTION:

(1431-24-A)

WHEREAS, August Misch, for William J. Durr, owner, filed, December 4, 1924, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 3294 Hull avenue, The Bronx; and

WHEREAS, the decision of the fire commissioner, rendered December 2, 1924, reads:

MINUTES

"Replying to your letter of the 8th inst. in which you requested a temporary permit to cover a fuel oil heating plant at the mentioned address, we regret to advise that we must deny your request in view of the fact that the plans covering the installation indicate that the burner which you intend using is not a type approved by the Board of Standards and Appeals."; and

WHEREAS, the building is non-fireproof, three stories in height, 25 ft. by 50 ft. in area. OCCUPIED: 1st story, stores; upper stories, dwellings; and

WHEREAS, a fuel oil burning system has been installed consisting of a 200 gallon fuel oil storage tank, a 55 gallon auxiliary tank and a "Universe" oil burner with necessary valves and piping; and

WHEREAS, appellant contends that the installation conforms with the fuel oil rules excepting in that the burner is not an approved burner, and requests a temporary permit pending approval of the burner by the board; and

WHEREAS, this appeal was granted by the board at its meeting February 10, 1925, for a temporary period, and appellant requests an extension of time.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a temporary period of ninety (90) days, on condition that the installation otherwise shall comply with the fuel oil rules of the board of standards and appeals, pending action on petition for approval of burner by the board of standards and appeals.

THE RESOLUTION:

(1523-24-BZ)

WHEREAS, John J. Dunnigan, for Christine Bottenus, owner, filed, December 27, 1924, an application, under the building zone resolution, to permit in a residence district the maintenance of a garage for the storage of four (4) pleasure motor vehicles, all spaces rented to persons not residing on the premises; premises 1665 Davidson avenue, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at regular meeting, October 20, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Davidson avenue, West 174th street and Featherbed lane are all in residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered December 22, 1924, reads:

"Your request of December 15th, for a certificate of occupancy for the existing building at 1665 Davidson Avenue, S/W Corner of 174th Street, Bronx, as a public garage for four (4) automobiles is hereby denied as the premises are located in a residence district in which such occupancy is prohibited by the Building Zone Resolution.";

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 40 ft. and a depth of 20 ft.; to be occupied as garage for the storage of four (4) pleasure motor vehicles, all spaces rented to persons not residing on the premises; and

WHEREAS, applicant filed 91.9 per cent of consents of affected property owners in support of his application under section 7-g of the building zone resolution, and the board deemed the variation a reasonable application of the law.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the capacity of the garage be restricted to four automobiles of the pleasure-car type, space for three of which may be rented to persons not residing on the premises; that there shall be no gasoline storage equipment installed, and there shall be no signs or advertising of any nature or description displayed on the premises; and further, that all permits necessary be obtained within ninety days.

518-25-BZ.

APPLICANT—Mary J. Cheeseman, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the maintenance of a hairdressing business use contrary to section 3 of the building zone resolution.

PREMISES AFFECTED—110 West 82nd street, Manhattan.

APPEARANCES—

For Applicant: Mary J. Cheeseman.
For Opposition: Harry Jacobs, Walter G. Butler and Edward Vogler.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Fire Chief Kenlon..... 1
Negative: Chairman Walsh, Commissioners
Connell, Flanagan and Guilfoyle..... 4
Absent 0

THE RESOLUTION:

(518-25-BZ)

WHEREAS, Mary J. Cheeseman, owner, filed, May 19, 1925, an application, under the building zone resolution, to permit in a residence district the maintenance of a hairdressing business, contrary to section 3 of the zone resolution; premises 110 West 82nd street, Borough of Manhattan; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at regular meeting, October 20, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 82nd street is in a residence district, Columbus avenue is in a business district and West 81st street is in a residence district; and

WHEREAS, the order of the superintendent of buildings, dated August 25, 1925, reads:

MINUTES

"Occupancy of above premises for business purposes (a hairdressing parlor), in a residence district, is contrary to Sec. 2, Art. 3 of the Building Zone Resolution.";

and
WHEREAS, the existing building is of non-fireproof construction, four stories and basement in height, with a frontage of 17 ft. and a depth of 54 ft., the 1st story to be maintained as a hairdressing parlor; and

WHEREAS, the board deemed that applicant failed to establish her basis of appeal of hardship under section 21 of the building zone resolution, and that the business invasion requested in this residence street was unwarranted.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

661-25-BZ.

APPLICANT—George Kindermann, for Manderkin Building Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business and also in a "B" area district the omission of a rear yard, as required by the building zone resolution.

PREMISES AFFECTED—1362-4-6 Webster avenue, The Bronx.

APPEARANCES—

For Applicant: George Kindermann.

For Oppositon: M. John Silver.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire

Chief Kenlon 5

Absent 0

THE RESOLUTION:

(661-25-BZ)

WHEREAS, George Kindermann, for Manderkin Building Company, owner, filed, June 25, 1925, an application, under the building zone resolution, to permit in a business and also in a "B" area district the omission of a rear yard as required by the zone resolution; premises 1362-1366 Webster avenue, east side, 75 ft. north of Kinderman place, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at regular meeting, October 20, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Webster avenue, Kinderman place and Brook avenue are in both a business and "B" area district; and

WHEREAS, the decision of the superintendent of buildings, rendered June 16, 1925, reads:

"1. Rear yard must be provided above first story to comply with requirements of Building Zone Resolution in a business use district and "B" area district.";

and

WHEREAS, the proposed building is to be of fireproof construction, eight stories in height, with a frontage of 46 ft. and a depth of 90 ft.; to be occupied as furniture storage warehouse; the building to occupy the entire area of the lot, leaving no rear yard; and

WHEREAS, the board deemed that the vigorous opposition to the granting of this application was warranted by surrounding conditions and circumstances and that the applicant failed to establish a basis of appeal under hardship, section 21 of the building zone resolution.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

1072-23-BZ.

APPLICANT—Charles H. Doty, owner.

SUBJECT—Application for reopening (re order of fire commissioner) to permit in a residence district the maintenance of a garage for the storage of five (5) motor vehicles, four (4) spaces rented to persons not residing on premises.

PREMISES AFFECTED—41 Richmond street, Brooklyn.

APPEARANCES—

For Applicant: Charles H. Doty.

For Opposition: None.

ACTION OF BOARD—Application reopened and granted extension of permit for two years on same conditions.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND EXTEND PERMIT—

Affirmative: Chairman Walsh, Commission-

ers Connell, Flanagan and Guilfoyle 4

Negative 0

Absent: Fire Chief Kenlon..... 1.

THE RESOLUTION:

(1072-23-BZ)

WHEREAS, Louis Hautb, for Charles H. Doty, owner, filed, September 10, 1923, an application, under the building zone resolution, to permit in a residence district the maintenance of a garage for the storage of five (5) motor vehicles, four (4) spaces rented to persons not residing on the premises, 41 Richmond street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, November 20, 1923, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Richmond street and Chestnut street are residence districts and Jamaica avenue is a business district; and

WHEREAS, the order of the fire commissioner, dated August 21, 1923, Order No. 82202-LC, reads:

"With reference to your application dated June 4, 1923, for a permit to maintain a garage at the above location, I regret to inform you that I am without power to grant such a permit for the following reasons:

"Maintenance of your garage is a violation of Section 3 of Article 2 of the Building Zone Resolution of the Board of Estimate and Apportionment of the City of N. Y. adopted July 25, 1916, inasmuch as motor vehicles stored are used for commercial purposes.

"You are therefore ordered to remove all motor vehicles used exclusively for business purposes and discontinue the use of premises for storing other than pleasure or touring cars the property of the applicant residing on the premises.";

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 50 feet and a depth of 20 feet; occupied as a garage for five motor vehicles, space for four of which is rented to persons not residing on premises; and

WHEREAS, the applicant has filed the duly acknowledged consents of the owners of 92 per cent of the property frontage deemed by the board to be affected; and

WHEREAS, this application was granted by the board at its meeting, November 20, 1923, for a temporary period, and applicant requests an extension of time.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the conduct of the garage be limited to the storage of five (5) automobiles of the pleasure car type, space for four of which may be rented to persons not residing on the premises; and *on further condition* that the garage shall be subdivided and maintained as individual units and that this permit shall be for a temporary period not extending beyond two years from the date of this action by the board.

828-23-BZ.
APPLICANT—Gloria Finck, for Louise M. Torrance, lessee.
SUBJECT—Application for renewal of permit (re: decision of tenement house commissioner) to permit in a residence district the display of a sign of professional title on the front wall, 1st story, of a residence building.
PREMISES AFFECTED—425 Park avenue, Manhattan.
APPEARANCES—
For Applicant: Gloria Finck.
For Opposition: None.
ACTION OF BOARD—Application reopened and granted two years' extension of permit on same conditions.
CONDITIONS—As specified in resolution.
THE VOTE TO REOPEN AND EXTEND PERMIT—
Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle 4
Negative 0
Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(828-23-BZ)

WHEREAS, Miss Gloria Finck, for Robert W. Golet, owner, filed, June 29, 1923, an application, under the building zone resolution, to permit in a residence district the display of a sign of professional title on the front wall, 1st story of a residence building; premises 425 Park avenue, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, July 31, 1923, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Park avenue, East 55th and East 56th streets are residence districts; and

WHEREAS, the decision of the tenement house commissioner, rendered June 5, 1923, reads:

"4. In violation of the building zone resolutions as adopted by the Board of Estimate and Apportionment on July 25, 1916, the basement at front is used for an interior decorator's business.

"The use of said basement for business purposes must be discontinued forthwith and the building permanently used for residential purposes only.";

and

WHEREAS, the building is of non-fireproof construction, four stories in height, with a frontage of 20 ft. and a depth of 60 ft.; occupied as a dwelling, there being located on the front wall in the 1st story a sign 8 in. by 14 in. in area, with name and professional title of occupant; and

WHEREAS, there would be hardship in compelling applicant to remove from the building at this time; and

WHEREAS, this application was granted by the board at its meeting, July 31, 1923, for a temporary period, and applicant requests an extension of time.

Resolved, that the board of standards and appeals does

hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted*, permitting the display of flat metal wall sign, *on condition* that said sign shall not exceed 8 in. by 14 in., restricted to the name of the occupant and the professional title—"Decorator"—and *granted* for a temporary period not extending beyond October 20, 1927.

61-25-BZ.

APPLICANT—Magnuson & Kleinert, for Albert E. Castle, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—3313 Tilden avenue, Brooklyn.
APPEARANCES—None.

ACTION OF BOARD—Application dismissed for lack of prosecution.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle 4
Negative 0
Absent 0

THE RESOLUTION:

(61-25-BZ)

WHEREAS, Magnuson & Kleinert, for Albert E. Castle, owner, filed, January 15, 1925, an application, under the building zone resolution, to permit partly in a residence district and partly in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 3313 Tilden avenue, Borough of Brooklyn; and

WHEREAS, applicant failed to complete his papers, though duly notified so to do.

Resolved, that the application be and it hereby is *denied* for lack of prosecution.

AREA FIXED.

The chairman presented and read a communication from John J. Dunnigan, requesting the board to fix the area deemed affected and within which to obtain consents for the alteration and extension of a garage; premises 117-119 Carroll street, Brooklyn.

The following area was approved by the board:

Both sides of Carroll street from a point 100 ft. east of Henry street to a point 400 ft. west of the garage; east side of Hicks street from Carroll street to a point 120 ft. north of Carroll street; also the properties at rear and for a distance of 50 ft. on either side of the side lot lines of the premises in question.

Adjourned 1 p. m.

JAMES O'CONNOR, *Secretary*.

THE RESOLUTION:

(549-25-A)

WHEREAS, Arthur Weiser, for Harry Robinson, owner, filed, May 27, 1925, an appeal, with the board of standards and appeals, from an order of the superintendent of buildings, affecting premises 44 West 50th street, Manhattan; and

WHEREAS, the order of the superintendent of buildings, No. 166-1924, reads:

"You are hereby directed to provide an outside iron fire escape on the rear of building with balconies covering two windows on each of the 1st, 2nd, 3rd and 4th stories. Balconies to be 3 ft. 6 in. wide, guard rails 36 in. high, balconies connected by 60 degree stairs 20 in. wide, a drop ladder in guides from lowest balcony to ground and a gooseneck ladder to roof. Safe egress from termination of fire escapes must be provided; unobstructed egress must be provided to fire escapes on each floor."

and

WHEREAS, the building is non-fireproof, four stories and basement in height, 20 ft. by 55 ft. in area; OCCUPIED for stores and dwellings, two apartments on each of the 2nd and 3rd stories and one on the 4th story; the means of egress consisting of an interior stairway, extending from the 1st story to the top story, with scuttle and iron ladder to the roof; and

WHEREAS, the appellant contends that the number of occupants is small and the means of egress are adequate.

Resolved, that the order of the superintendent of build-

ings be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

618-25-A.

APPELLANT—Schwartz & Gross, for Broadway & 38th Street, Inc., owner.

ers Connell, Flanagan, Guilfoyle and Fire

Chief Kenlon 5

Negative 0

Absent 0

THE RESOLUTION:

(618-25-A)

WHEREAS, Schwartz & Gross, for Broadway and 38th Street, Inc., owner, filed, June 15, 1925, an appeal, with the board of standards and appeals, from a decision of the fire commissioner, affecting premises 134-142 West 38th street and 1385-1391 Broadway, Borough of Manhattan; and

WHEREAS, the decision of the fire commissioner, rendered June 10, 1925, reads:

"3. The height of the building being in excess of 280 feet, a fire pump with appurtenances, all according to Rule No. 26, Board of Standards and Appeals, must be provided."

and

WHEREAS, the building is fireproof, 23 stories in height, 104 ft. by 174 ft. 6 in. and 207 ft. 2 in., irregular in area; OCCUPIED for offices, showrooms and 25 per cent manufacturing; the building being 283 ft. 9 in. in height; equipped with two 8 in. standpipe risers and an approved sprinkler system; and

WHEREAS, appellant contends that a standpipe will be installed in accordance with the rules of the board of standards and appeals except that they wish to omit the fire pump.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the installation of fire pump, on condition that approved standpipe equipment shall be installed complete in all other respects; and that an approved wet-line sprinkler system shall be installed and maintained throughout entire premises.

THE RESOLUTION:

(658-25-A)

WHEREAS, M. M. Belding, owner, filed, June 25, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 116 East 88th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated June 6, 1925, reads (Order No. 29785-LC):

MINUTES

"1. Separate boiler from remainder of building by unpierced wall of solid masonry at least 8 inches in thickness. Entrance to boiler room to be from exterior of building only. Chapter 10, Section 159-1, Code of Ordinances.";

and

WHEREAS, the building is non-fireproof, three stories in height, 25 ft. 6 2-3 in. by 95 ft. 9 in. and 25 ft. 6 2-3 in. by 64 ft. 8 in. above. OCCUPIED: 1st story, private garage; 2nd story, 1 bedroom; 3rd story, apartment; and

WHEREAS, appellant contends that to separate the boiler room would involve the removal of the present heater room, the construction of another at the rear of the building, the erection of a smoke flue from the ground to sufficient height to secure proper draft, and the reconstruction of the entire heating plant, installed within the last five years.

Resolved, that the order of the fire commissioner be and it hereby is affirmed, and the appeal be and it hereby is denied.

663-25-A.

APPELLANT—Erwin Rebafka, of Brown, Wheelock, Harris, Vought & Co., Inc., for Estate of J. W. Nichols, owner.

SUBJECT—Appeal from order of fire commissioner.

Negative	0
Absent	0

THE RESOLUTION:

(663-25-A)

WHEREAS, Erwin Rebafka, for Brown, Wheelock, Harris, Vought & Co., Inc., for Estate of J. W. Nichols, owner, filed, June 26, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 463-7 Broadway, Manhattan; and

WHEREAS, the order of fire commissioner, No. 79443-F, reads:

"Install a standpipe system * * *";

and

WHEREAS, the building is non-fireproof, five stories in height, 85 ft. 9 in. by 100 ft. in area; OCCUPIED, offices, showrooms and stock rooms, 95 persons in entire premises; the height of building being 84 ft. 5 in.; and

WHEREAS, the appellant contends that the height of the building is less than 85 ft. and that the area is less than 10,000 sq. ft.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that an approved automatic fire alarm system, with central office connection, shall be maintained; and that not less than sixteen (16) water buckets shall be maintained in the hall on each story; and granted so long as conditions as to occupancy and use remain substantially unchanged.

665-25-A.

APPELLANT—F. P. Keniston, for Spring Products Corp., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—2505 Third avenue, The Bronx.

APPEARANCES—

For Appellant: F. P. Keniston.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition. CONDITIONS—As specified in resolution.

THE VOTE—

Negative	0
Absent	0

THE RESOLUTION:

(665-25-A)

WHEREAS, F. P. Keniston, for Spring Products Corporation, lessee, filed, June 26, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 2505 Third avenue, The Bronx; and

WHEREAS, the order of the fire commissioner, No. 29707-LD, reads:

"1. Provide an approved buried storage system of sufficient capacity for the proper storage of benzine.

"2. Discontinue the storage or use of benzine in the same room or compartment where there is an open flame.";

and

WHEREAS, the building is non-fireproof, five stories in height, 25 ft. by 90 ft. in area; OCCUPIED for the manufacture of springs, shipping and japanning on the 1st story; a total of 58 persons in the entire building; and

WHEREAS, appellant contends that they only store 50 gallons of benzine, which is used to thin the lacquer in the dipping room, which room is enclosed in fireproof partitions and that this room is 12 ft. from the gas fire oven where the springs are baked, and requests permission to use a portable safety tank.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted on condition that the quantity of benzine stored on premises shall not exceed 50 gallons, stored in metal drum, buried in rear yard, vented to outer air above 1st story level; that the dipping room shall be constructed of not less than 4 in. fireproof block partition, unpierced within the floor area of 1st story, opening directly to rear yard only; that the metal gas fire oven shall be enclosed with a 4 in. terra cotta partition, with not more than one opening on interior of building, equipped with fireproof door; that the ceiling of dripping room and metal oven enclosure shall be fire-retarded; and that no empty gasoline or benzine drum shall be maintained or stored in any part of premises.

667-25-A.

APPELLANT—Monroe J. Zimmerman, for Frederick H. Tims, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—3202 Perry avenue, The Bronx.

APPEARANCES—

For Appellant: Monroe J. Zimmerman.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition. CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon	5
Negative	0
Absent	0

THE RESOLUTION:

(667-25-A)

WHEREAS, Monroe J. Zimmerman, for Frederick H. Tims, owner, filed, June 29, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 3202 Perry avenue, Borough of The Bronx; and

WHEREAS, the order of the fire commissioner, No. 29964-LC, dated June 13, 1925, reads:

"You are hereby notified that an inspection of prem-

MINUTES

ises 3202 Perry Ave., Bronx, used for the storage and use of fuel oil in connection with your fuel oil burning equipment, shows that the following must be done before the permit requested by you can be issued:

"1. Expose buried tank to view so that a proper hydrostatic test may be made by a representative of Fire Commissioner * * *.

"7. Provide a hydrostatic test of not less than one hundred pounds per square inch for all Grade B Fuel Oil, carrying piping * * *."

and

WHEREAS, the building is non-fireproof (frame), two stories in height, 20 ft. by 60 ft. in area; OCCUPIED as a dwelling, one family on each story; a fuel oil burning equipment, consisting of a 550-gallon storage tank and a Powerlight oil heat burner has been installed; the tank and piping not having been inspected and tested; and

WHEREAS, appellant contends that the piping used is standard wrought iron and that the tank complies with the fuel oil rules.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted, as to Item 1, on condition that a factory test certificate shall be filed with the fire department; as to Item 7, on condition that an affidavit of test shall be filed with the fire department as to the piping, and that the fuel oil burning installation shall be equipped with standard wrought iron pipe throughout; and further that the fuel oil burning equipment shall comply with the fuel oil rules of the board of standards and appeals in all other respects.

BUILDING ZONE CASES.

241-25-BZ.

APPLICANT—Philip J. Sinnott, for Brolux Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1202-1206 Lind avenue, The Bronx.

APPEARANCES—

For Applicant: Philip J. Sinnott.

For Opposition: James Duignan, Matthew J. Whelehan, Arthur Kunze, Miss M. E. Brennan, Geo. Schrade, Wm. Hoart and others.

ACTION OF BOARD—Application laid over to November 17, 1925, at 2 p. m., to submit proof as to the existence of a stable.

505-25-BZ.

APPLICANT—John J. Kadel, for Walton Whyte Realty Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—East side of Jerome avenue, 350 ft. south of East 181st street, The Bronx.

APPEARANCES—

For Applicant: John J. Kadel.

For Opposition: William B. De Lacey, Henry C. White and others.

ACTION OF BOARD—Application laid over to October 27, 1925, at 10 a. m.

575-25-BZ.

APPLICANT—Gardiner Conroy, for O'Hara Realty Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—507-511 Flatbush avenue and 1118-1122 Washington avenue, Brooklyn.

APPEARANCES—

For Applicant: Murray Riskin.

For Opposition: None.

ACTION OF BOARD—Application laid over to November 4, 1925, at 2 p. m., on request of applicant's representative.

447-25-BZ.

APPLICANT—Benjamin Driesler, Jr., for Incorporated Parkway Builders, Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit partly in a business district and partly in a residence district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—71-85 Caton place, Brooklyn.

APPEARANCES—None.

ACTION OF BOARD—Application withdrawn on written request of applicant.

THE VOTE TO WITHDRAW—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon..... 1

375-23-BZ.

APPLICANT—Thomas W. Lamb, for B. F. Keith New York Theatre Company, owner.

SUBJECT—Application for reopening (re: decision of superintendent of buildings) to permit the erection of a place of public assembly, extending into a residence district.

PREMISES AFFECTED—109 East Fordham road, The Bronx.

APPEARANCES—

For Applicant: J. Henry Walter.

For Opposition: None.

ACTION OF BOARD—Application reopened, subject to calendar call.

THE VOTE TO REOPEN—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon..... 1

1453-24-BZ.

APPLICANT—John J. Dunnigan, for James Murphy, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—24 Evelyn place, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: Francis J. Carlucci, Gertrude I. Leahy, Patrick J. Hogan, John Klemeyer and G. Artzt.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Commissioners

Connell, Flanagan and Guilfoyle..... 4

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(1453-24-BZ)

WHEREAS, John J. Dunnigan, for James Murphy, owner, filed, December 9, 1924, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises southeast corner Evelyn place and Davidson avenue, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 20, 1925, after due notice by publication in

MINUTES

the Bulletin of the Board of Standards and Appeals; and
WHEREAS, the use district maps accompanying the building zone resolution show that Evelyn place is in a residence district, that Davidson avenue is in a business and residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered December 5, 1924, reads:

"Erection of proposed garage for storage of more than five motor vehicles in residence district is contrary to provisions of Building Zone Resolution.";
and

WHEREAS, the proposed building is to be of non-fireproof construction, two stories in height, with a frontage of 100 ft. on Davidson avenue and 115 ft. on Evelyn place; to be occupied as garage for the storage of more than five motor vehicles; and

WHEREAS, there was opposition to the granting of this application on the part of adjoining property owners, and the board deemed that, in view of the residence use development surrounding this plot, it would be a hardship and unwarranted invasion to permit a non-conforming use.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

419-25-BZ.

APPLICANT—William Bone, for Hyman Wynehouse, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of five (5) detached residence buildings to be used for store purposes on the first story.

PREMISES AFFECTED—4110-4118 Ninth avenue, Brooklyn.

APPEARANCES—

For Applicant: Walter R. Kuhn and Hyman Wynehouse.

For Opposition: Frank S. Johnson, Mr. Meyer, Alderman Dunn and others.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0,

Negative : Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(419-25-BZ)

WHEREAS, William Bone, for Hyman Wynehouse, owner, filed, April 18, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of five detached residence buildings, to be used for store purposes on the 1st story; premises 4110-4118 Ninth avenue, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 20, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Ninth avenue, 41st street and 42nd street are all in residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered March 6, 1925, reads:

"Proposition contrary to the Zone Resolution, Art. 2, Sec. 3. The erection of stores in a residential district: Application therefore denied.";
and

WHEREAS, the proposed buildings are of non-fireproof construction, three stories in height, with a frontage of 100 ft. and a depth of 100 ft.; to be occupied as stores on the 1st story and as dwellings above; and

WHEREAS, the applicant failed to substantiate the basis of his appeal under section 21, namely, hardship; the adjoining non-conforming use (a chicken slaughter house) was located on the adjoining premises at the time the applicant purchased the property; the slaughter house, moreover, is not on the same street front.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

640-25-BZ.

APPLICANT—William F. Doyle, for Kap Realty Co., Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a 1½ times district the erection of the street walls of a building to a height in excess of the limit set by the zone resolution.

PREMISES AFFECTED—553-555 Eighth avenue and 304 West 38th street, Manhattan.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(640-25-BZ)

WHEREAS, William F. Doyle, for Kap Realty Company, Inc., owner, filed, June 22, 1925, an application, under the building zone resolution, to permit in a 1½ times district the erection of the street walls of a building to a height in excess of the limit set by the zone resolution; premises 553-555 Eighth avenue and 304 West 38th street, Borough of Manhattan; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 20, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Eighth avenue to center line West 38th street is in a 1½ times height district, and that Eighth avenue, north of center line West 38th street, is in a 2 times height district; and

WHEREAS, the decision of the superintendent of buildings, rendered June 20, 1925, reads:

"Proposed height of building is excessive for a one and a half times district. Art. III, Par. 8 of the Zoning Resolution.";
and

WHEREAS, the proposed building is to be of fireproof construction, 25 stories, 288 ft., in height, with a frontage of 49 ft. 4 in. on Eighth avenue and 25 ft. on West 38th street; to be occupied as stores and factory; the height of street wall on Eighth avenue and on 38th street to be 198 ft. with setbacks above, in accordance with the 2 times district, based on width of Eighth avenue instead of a 1½ times district; and

WHEREAS, the premises in question face a two (2) times height district on the Eighth avenue frontage and for a distance of 100 ft. on 38th street; and, in view of the consent on file in this office of the adjoining and immediately affected abutting owners;

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted*, only so far as it affects the setback requirements for the street frontages, and that the two (2) times setback requirements and regulations be *granted* and apply for the street frontages, *on condition* that the requirements of the building zone resolution be complied with in all other respects as to rear yard, area, use and occupancy, and that the necessary permits be obtained within nine months and the building completed within eighteen months of the date of this action.

Adjourned 6.20 p. m.

JAMES O'CONNOR, Secretary.

RULES

FIRE RETARDING RULES

Adopted by the Board of Standards and Appeals August 30, 1917; Amended November 1, 1917.

Rule 1. Fire Retarding Materials for Garages, Motor Vehicle Repair Shops and Oil Selling Stations. In garages, motor vehicle repair shops and oil selling stations any material or form of construction shall be deemed fire-retarding within the meaning of §73, subdivision 3, of the building code, that resists the action of flame and heat when subjected to a continuous fire for one hour at an average temperature of seventeen hundred (1700) degrees Fahrenheit without the passage of flame, and with a maximum temperature rise to four hundred (400) degrees Fahrenheit on the side away from the fire. The point at which the temperature of transmitted heat is measured shall be protected from external air and weather conditions.

When the test specimen is in the form of partition construction, the area under test shall be not less than one hundred (100) square feet and least dimension shall be not less than nine (9) feet. When in the form of floor construction, the area under test shall be not less than two hundred (200) square feet and the least dimension shall be not less than fourteen (14) feet.

During the fire, the floor construction shall support the live load for which it is designed, and after the fire shall safely sustain twice the designed live load with a maximum deflection of not more than one two-hundredth (1/200) part of the span.

Rule 2. Wood Joisted Floor Construction. Wood joisted floor construction shall be accepted as fire-retarding construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations when the beams are protected on the upper and under sides with the fire-retarding materials specified in rules for floor and ceiling coverings.

Rule 3. Floor Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the upper sides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) Seven-eighths ($\frac{7}{8}$) inch wood underflooring protected with a membrane of two-ply waterproofing covered with not less than two and one-half ($2\frac{1}{2}$) inches of 1:2½:5 concrete or better, reinforced with not less than one-fourth ($\frac{1}{4}$) of one (1) per cent of steel mesh.

(b) Two and one-half ($2\frac{1}{2}$) inches of 1:2:4 concrete applied directly to the top of the joists, with or without temporary support, reinforced with not less than one-fourth of one per cent steel rods, mesh or steel lath, and having the tops of the joists coated with approved waterproof paint or protected by tar paper on the top and on the sides for a distance of three inches from the top. (Amendment, Nov. 1, 1917.)

Rule 4. Ceiling Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the undersides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) One-half ($\frac{1}{2}$) inch plaster boards with pointed joints covered with No. 26 U. S. gauge sheet metal with one (1) inch lapped seams nailed to the wood beams when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are spaced more than sixteen (16) inches on centers;

(b) Two thicknesses of one-quarter ($\frac{1}{4}$) inch asbestos board laid with tight staggered joints and nailed to the beams, when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are more than sixteen (16) inches on centers.

(c) Metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($\frac{3}{4}$) inch thick.

Rule 5. Attachment to Ceiling. Fire-retarding ceilings in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations shall be attached to wood floor beams and girders in such manner as to maintain an air space between the wood beams, and all wood beams shall be seasoned before applying the protective coat.

Rule 6. Openings in Fire-Retarding Floors. Pipes or conduits which pass through floors shall be fitted with metal thimbles and made watertight for a height of three (3) inches above the floor.

Rule 7. Columns. All structural posts and columns in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials accepted in fireproof construction; except that an air space shall not be required around steel or cast iron columns.

Where necessary for protection against mechanical injury, the fire-retarding protection on columns shall be jacketed to a height of five (5) feet from the ground with No. 4 U. S. gauge metal.

Rule 8. Girders. All girders in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials acceptable in fireproof construction; except that an air space need not be provided around steel girders.

Rule 9. Shaft Enclosures. Existing stairways and vertical shafts in non-fireproof business buildings hereafter converted to be used as garages, motor vehicle repair shops or oil selling stations shall be enclosed in fire-retarding partitions continued through the non-fireproof floor construction, and when unfilled wood stud partitions are used, the space between the floor beams shall be fire-stopped with incombustible materials. All openings in such partitions shall be protected with accepted metal-covered fire doors or windows. Wherever necessary for protection against mechanical injury, the partition shall be jacketed to a height of five (5) feet on the garage side with No. 4 U. S. gauge metal. Any one of the following forms of partitions shall be accepted for the enclosure:

(a) Two by four inch wood studs, spaced not more than sixteen (16) inches on centers, covered both sides with metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($\frac{3}{4}$) of an inch thick;

(b) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($\frac{7}{8}$) inch wood sheathing, one-half ($\frac{1}{2}$) inch plaster boards with pointed joints and No. 26 U. S. gauge sheet metal with one-inch lapped seams;

(c) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($\frac{7}{8}$) inch wood sheathing, two thicknesses of one-quarter ($\frac{1}{4}$) inch asbestos boards laid with tight staggered joints and jacketed with No. 16 U. S. gauge metal on the garage side to a height of five (5) feet.

(d) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, filled in solidly between the studs with four inches of approved fireproof materials and covered on both sides with No. 26 U. S. gauge metal;

(e) Existing wood stud, lath and plaster partitions covered on the garage side with No. 26 U. S. gauge sheet metal with one-inch lapped seams.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, November 20, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] *two hundred (200)* feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half ($3\frac{1}{2}$) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half ($3\frac{1}{2}$) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half ($\frac{1}{2}$) inch pipe connection and one-half ($\frac{1}{2}$) inch orifice and a bronze ball of proper size, or by a three-quarter ($\frac{3}{4}$) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

(a) For Standard one-half ($\frac{1}{2}$) inch heads—

8 feet in 12 foot bays;
9 feet in 11 foot bays;
10 feet in 10 foot bays;
11 feet in 9 foot bays;
12 feet in 5 to 8 foot bays;

(b) For Conran* one (1) inch heads—

20 feet in 5 to 12 foot bays.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

25 feet in 5 to 12 foot bays.

(d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half ($\frac{1}{2}$) inch head for each $62\frac{1}{2}$ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half ($\frac{1}{2}$) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half ($11\frac{1}{2}$) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half ($11\frac{1}{2}$) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 "	2 heads
$1\frac{1}{4}$ "	3 "
$1\frac{1}{2}$ "	5 "
2 "	10 "
$2\frac{1}{2}$ "	20 "
3 "	36 "
$3\frac{1}{2}$ "	55 "
4 "	80 "
5 "	140 "
6 "	200 "
7 "	300 "
8 "	420 "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ "	2 heads
$1\frac{1}{2}$ "	3 "
2 "	4 "
$2\frac{1}{2}$ "	6 "
3 "	9 "
4 "	18 "
5 "	34 "
6 "	51 "
7 "	75 "
8 "	105 "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ "	2 heads
2 "	3 "
$2\frac{1}{2}$ "	4 "
3 "	6 "
4 "	12 "
5 "	21 "
6 "	40 "
7 "	60 "
8 "	84 "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following² number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.

At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before the board—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of the board, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of the board is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

BOARD OF STANDARDS AND APPEALS

WILLIAM E. WALSH, Chairman

Commissioners

HENRY L. CONNELL

JOSEPH FLANAGAN

JOHN GUILFOYLE

FIRE CHIEF JOHN KENLON

JAMES O'CONNOR, *Secretary*

EDWARD V. BARTON, *Chief Clerk*

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board

CONTENTS

This issue of the Bulletin contains, in the order given—

- Docket.
- Call of Clerk's Calendar.
- The Trial Calendar.
- Notices in Building Zone Cases.
- Special Notice.
- Minutes of Special Meeting, October 23, 1925, at 2 p. m.
- Minutes of Meeting, October 27, 1925, at 10 a. m.
- Rules.
- Notice of Public Hearing.
- Second Quarterly Report.
- Progress Report.

PUBLIC HEARINGS

Tuesdays, at 10 a. m. and 2 p. m.

Special meetings as published in this Bulletin.

Call of Clerk's Calendar, Tuesdays, at 2 p. m.

All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of the board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The *Clerk's Calendar* consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, *Wednesday, November 4, 1925*, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, November 10, 1925, at 2 o'clock.

The *Clerk's Calendar* is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, *Chairman.*

CALL OF CLERK'S CALENDAR.

BUILDING ZONE CASES.

Wednesday, November 4, 1925, at 2 p. m.

409-25-BZ.
APPLICANT—Philip J. Sinnott, for John A. Ternlund and Domenico Centroni, owners.
PREMISES—1820-1832 Nostrand avenue, Brooklyn.
TO PERMIT in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

903-25-BZ.
APPLICANT—McCooley and Conroy, for N. & H. Building Co., Inc., owner.
PREMISES—823-829 Classon avenue, Brooklyn.
TO PERMIT in a business district the change of occupancy of the 2nd story from auto accessories to a garage for the storage of more than five (5) motor vehicles.

981-25-BZ.
APPLICANT—Laurence McGuire, for 36th Street & 8th Avenue Corp., owner.
PREMISES—520-530 Eighth avenue, 267-275 West 36th street and 260-264 West 37th street, Manhattan.
TO PERMIT in a two-times height district the erection and maintenance of the street walls to a height exceeding the prescribed limit required by the zone resolution.

436-25-BZ.
APPLICANT—John J. Dunnigan, for Joseph Puglieri, owner.
PREMISES—117-119 Carroll street, Brooklyn.
TO PERMIT in a residence district the alteration and extension of a garage for the storage of more than five (5) motor vehicles.

644-25-BZ.
APPLICANT—H. I. Feldman, for Max Ackerman, owner.
PREMISES—301-5 East 97th street, Manhattan.
TO PERMIT in a business district, extending from an unrestricted district, the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

CALENDAR

BOARD OF STANDARDS AND APPEALS.

APPEALS FROM ADMINISTRATIVE ORDERS.

Wednesday, November 4, 1925, at 10 a. m.

- 177-25-A—136 Wooster street, Manhattan.
511-25-A—810 Fourth avenue, Brooklyn.
636-25-A—142-144 Greene street, Manhattan.
647-25-A—Northwest corner of Twentieth avenue and Northern boulevard (Jackson avenue), L. I. City, Queens.
655-25-A—83-101 North 3rd street and 209-219 Wythe avenue, Brooklyn.
678-25-A—221-249 McKibben street, Brooklyn.
685-25-A—533-543 West 33rd street, Manhattan.
756-25-A—520-524 West Broadway, Manhattan.
278-25-A—280 Broadway, Manhattan.

BUILDING ZONE APPLICATIONS.

NOTICE IS HEREBY GIVEN by the board of standards and appeals of a public hearing under the provisions of the building zone resolution, *Wednesday morning, November 4, 1925, at 10 o'clock, in Room 1013, Municipal Building, on the following matters:*

- CAL. NO. 495-25-BZ—Application, May 11, 1925, under the building zone resolution, of Henry Nordheim, architect, on behalf of Katie Staudermann, owner, to permit in a residence district the alteration, extension and change of occupancy in part from a residence use to a business use; premises 722 East 175th street, The Bronx.
- CAL. NO. 532-25-BZ—Application, May 27, 1925, under the building zone resolution, of William F. Doyle, applicant, on behalf of Menick Holding Co., Inc., owner, to permit in a residence district extending from a business district the erection and maintenance of a theatre building; premises 868 Flatbush avenue, Brooklyn.
- CAL. NO. 552-25-BZ—Application, May 27, 1925, under the building zone resolution, of Philip J. Sinnott, applicant, on behalf of Fieldstone Garage, Inc., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles and also permit same to be of non-fire-proof construction (garage, with one street frontage, exceeding 7,500 sq. ft. in area); premises east side of Broadway, 223 ft. 8 in. north of West 231st street, Manhattan.
- CAL. NO. 598-25-BZ—Application, June 10, 1925, under the building zone resolution, of John J. Dunnigan, applicant, on behalf of Daniel Houlihan, owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 2974 Jerome avenue, The Bronx.
- CAL. NO. 724-25-BZ—Application, July 9, 1925, under the building zone resolution, of Wm. F. Doyle, applicant, on behalf of Celia Aronofsky, owner, to permit in a residence district the change of occupancy of an existing building from private

garage to store; premises 1515 Bryant avenue, The Bronx.

WILLIAM E. WALSH, *Chairman.*

BOARD OF STANDARDS AND APPEALS

APPEALS FROM ADMINISTRATIVE ORDERS.

Wednesday, November 4, 1925, at 2 p. m.

- 762-25-A—2201-2219 Grand street, Maspeth, Queens.
766-25-A—721-725 Lenox avenue, Manhattan.
768-25-A—1628-1648 East 9th street, Brooklyn.
769-25-A—239 Alabama avenue, Brooklyn.
773-25-A—62 Grand street, Manhattan.
1050-25-A—321 Madison street, Brooklyn.
606-25-A—231-235 East 42nd street, Manhattan.

BUILDING ZONE APPLICATIONS.

NOTICE IS HEREBY GIVEN by the board of standards and appeals of a public hearing under the provisions of the building zone resolution, *Wednesday afternoon, November 4, 1925, at 2 p. m., in Room 1013, Municipal Building, on the following matter:*

- CAL. NO. 470-25-BZ—Application, May 4, 1925, under the building zone resolution, of Walter B. Wills, applicant, on behalf of Frank Hartman, owner, to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 1219-1223 Putnam avenue, Brooklyn.
- CAL. NO. 575-25-BZ—Application, June 3, 1925, under the building zone resolution, of Gardiner Conroy, applicant, on behalf of O'Hara Realty Co., owner, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 507-11 Flatbush avenue and 1118-22 Washington avenue, Brooklyn.

THE RESOLUTION:

(611-25-A)

WHEREAS, J. Francis Burrows, representing John I. Downey, Inc., for Caroline Read, owner, filed, June 12, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 128 East 63rd street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated May 23, 1925, reads:

"1. Third story above garage is occupied as a dwelling * * *.

"2. Separate boiler from remainder of building by unpierced wall of solid masonry at least 8 inches in thickness. Entrance to boiler room to be from exterior of building only * * *."

(The above orders were issued when application was made for a permit to maintain a non-storage garage at these premises.)

and

WHEREAS, the building is non-fireproof, four stories in height, 25 ft. by 96 ft. in area at 1st story and 25 ft. by 70 ft. in area above. OCCUPIED: 1st story, private garage; 2nd story, vacant; 3rd and 4th stories, dwelling of chauffeur and housekeeper; and

WHEREAS, appellant contends that the floor of the garage is fireproof; that the boiler room is shut off from the garage portion of the premises by said fireproof floor and a brick stair enclosure, and it would be a hardship to comply with the order.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Item 1, *on condition* that the dwelling occupancy shall be restricted exclusively to the employees of the owner of the premises and that the intermediate or 2nd story shall be reserved for the temporary storage of household goods, the personal property of the owner of the premises; that the 1st story stairs within the garage area shall be enclosed in walls of approved masonry, carried directly to the street, with no opening from stairhall to garage; that the opening to the cellar shall be equipped with self-closing fireproof door with rabbeted jambs; and as to Item No. 2, *on condition* that a transverse wall of approved masonry shall be erected in cellar, approximately 45 ft. from the front wall, with not more than one opening therein, equipped with fireproof door;

that an engineer's fixed iron ladder shall be provided at the front of cellar to the sidewalk hatchway; that no gasoline storage equipment shall be maintained on the premises; and *granted* only so long as premises remains a private garage for the use and accommodation of the owner of the premises.

657-25-A.

APPELLANT—Vertex Realty Company, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—27-29-31 West 55th street, Manhattan.

APPEARANCES—

For Appellant: John J. Kenny.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE RESOLUTION:

(657-25-A)

WHEREAS, Vertex Realty Company, owner, filed, June 25, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 27-29-31 West 55th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated June 9, 1925, reads (Order No. 79436):

"1. Install standpipe system in accordance with approved plan No. 1634-23.

"Among the requirements necessary to comply with the above order are the following:

"A. Provide control valve on down side of check (as per plan).

"B. Provide 50 ft. of 2½ in. approved hose at each outlet with nozzle, rack, etc. (as per plan).

"C. Lower siamese connection to not less than 18 in. nor more than 24 in. above sidewalk (now 34 in.). Sec. 20, Ch. 12, Code of Ordinances."

and

WHEREAS, the building is fireproof, nine stories and pent house in height, 52 ft. 6 in. by 85 ft. in area; OCCUPIED as an apartment house; and

WHEREAS, appellant contends that the water supply for the 4 in. standpipe line is from the roof tank only; that there is a check valve on the top story on the tank side of check; that there is no water pressure on the down side of the check except when fire department connects to siamese on street, and that the control valve on down side of check is not necessary; in re: Item B, appellant contends that a 2½ in. hose valve has been installed at each story, but that 1½ in. hose has been installed in order to facilitate handling of the hose; and that structural conditions—a steel plate—made it necessary to have the siamese 34 in. above the sidewalk.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Item "A," *on condition* that not less than one gate valve shall be placed on one side of check; as to Item "B," *on condition* that 2½ in. hose shall replace the present hose when, in the judgment of the fire commissioner, the same becomes impaired by wear or tear; that a spanner wrench shall be provided at each outlet, fastened to standpipe with a chain; as to Item "C," *on condition* that siamese shall be placed on the front, on the outside face of the building; and that the standpipe installation otherwise shall comply with the rules and regulations now in force.

700-25-A.

APPELLANT—Samuel Rosenblum, for Benjamin and Jennie Ginsburg, lessees.

MINUTES

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—545 Broadway, Manhattan.

THE RESOLUTION:

(700-25-A)

WHEREAS, Samuel Rosenblum, for Benjamin and Jennie Ginsburg, lessees, filed, July 3, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 545 Broadway, Manhattan; and

WHEREAS, the order of the fire commissioner reads:

"1. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per sq. in. extending from cellar to roof * * *";

and

WHEREAS, the building is non-fireproof, facing on two streets, six stories in height, 83 ft. 10 in. high on the Broadway front and 89 ft. high on the Mercer street front and 25 ft. by 200 ft. in area; OCCUPIED for salesrooms, show rooms and jobbers of wearing apparel, less than 25 per cent manufacturing, approximately 15 persons per story; and

WHEREAS, applicant contends that very little manufacturing is done; that the occupancy is very light, and that the building is slightly over the 85 ft. limit only on the Mercer street front.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that not more than 25 per cent of area of building shall be occupied for manufacturing purposes; and that the building shall be equipped with an approved automatic fire alarm system with central office connection.

701-25-A.

APPELLANT—Richard J. Malloney, for George and Edward Blum, for Parklin Operating Co., owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—270-276 West 38th street and 554-558 Eighth avenue, Manhattan.

APPEARANCES—

For Appellant: Richard J. Malloney and Charles Muller.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Kenlon 4

Negative 0

Absent: Commissioner Connell..... 1

THE RESOLUTION:

(701-25-A)

WHEREAS, Richard J. Malloney, for George and Edward Blum, for Parklin Operating Company, owner, filed, July 3, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 270-276 West 38th street and 554-558 Eighth avenue, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated May 28, 1925, reads:

"1. As building is over 250 ft. in height, provide an 8 in. standpipe equipment. Examination continued when additional information is received.";

and

WHEREAS, the building is fireproof, 20 stories and pent house in height, 242 ft. 8 in. to top of floor beams and 255 ft. to the top of pent house; 133 ft. 4 in. by 98 ft. 9 in. in area. OCCUPIED: 1st, 2nd and 3rd stories, stores and show rooms; 4th to 20th stories, offices and factory; pent house as offices; 2nd to 16th story, 160 persons per story; 17th to 20th story, 70 persons per story; pent house, 10 persons; and

WHEREAS, appellant requests the acceptance of the proposed 6 in. standpipe inasmuch as the pent house area is only 1,400 sq. ft. over the allowable 4,600 sq. ft. (50 per cent of the 9,200 sq. ft. roof area) for a 6 in. standpipe, and contends further that the pent house is used only for offices.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the occupancy of the existing top story or so-called pent house shall be restricted to executive office use only; that the building shall be equipped with an approved sprinkler system; and that the standpipe installation shall comply with the rules in all other respects.

702-25-A.

APPELLANT—Alexander S. Traub, for Eugene Higgins, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—261-267 Canal street and 21-23 Howard street, Manhattan.

APPEARANCES—

For Appellant: Alexander S. Traub.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

THE RESOLUTION:

(702-25-A)

WHEREAS, Alexander S. Traub, for Eugene Higgins, owner, filed, July 3, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 261-267 Canal street and 21-23 Howard street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated June 16, 1925, reads (Order No. 79813-F):

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, * * *";

and

WHEREAS, the building is non-fireproof, the Canal street section being six stories (84 ft.) in height, and the Howard street section being five stories in height; having a frontage of 100 ft. on Canal street and 49 ft. 10 in. on Howard street; the easterly section of the basement being 8,300 sq. ft. and the westerly section being 7,600 sq. ft. in area, the 1st stories being, respectively, 8,000 and 7,400 sq. ft., divided in the cellar and 1st story by 16 in. brick north and south cross walls, two openings therein on each story being protected by fireproof doors in each side of the opening, the Howard street section having an area of 10,200 sq. ft. and the Canal street section having an area of 10,200 sq. ft. above the 1st story; the Canal street section of the building, above the 1st story, is subdivided by a 4 in. terra cotta partition with fire doors at the openings therein, into two 5,000 sq. ft. sections; OCCUPIED as offices and factory, approximately 250 persons in the entire premises; EQUIPPED with a two source sprinkler system and a fire alarm system; and

WHEREAS, applicant contends that the building is less than 85 ft. in height; that no section exceeds 10,000 sq. ft. in area, and that ample exits have been provided.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*

MINUTES

on condition that the structure as now subdivided with fireproof or brick walls shall remain unchanged; that all existing horizontal openings therein shall be equipped with self-closing fireproof doors; that the building shall be equipped with approved two-source sprinkler system, with central office connection, and that a fire alarm system shall be maintained; and *granted* only so long as conditions otherwise as to occupancy, use and area shall remain unchanged.

Absent: Commissioner Connell..... 1

THE RESOLUTION:

(705-25-A)

WHEREAS, Croker National Fire Prevention Engineering Company, for the C. H. Young Publishing Company, Inc., owner, filed, July 3, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 55-7 West 3rd street, Borough of Manhattan; and

WHEREAS, the orders of the fire commissioner, dated March 31, 1925, and April 28, 1925, read, respectively:

No. 74249-LF. "1. Raise standpipe tank twenty feet above the outlet in the highest story. Sec. 20, Ch. 12, Code of Ordinances, and Rule 12, 'Standpipe Fire Line Rules' of the Board of Standards and Appeals."

No. 74248-LF. "1. Arrange the house water supply pipe so that same will connect with tank on the outside thereof above the 3,500 gallon mark only. Sec. 20, Ch. 12, Code of Ordinances."

and

WHEREAS, the building is fireproof, eight stories in height, 50 ft. by 90 ft. in area; OCCUPIED as a tenant factory, approximately 40 persons per story; and

WHEREAS, appellant contends that the reserve for the standpipe system is in excess of 7,000 gallons of water, consisting of two tanks of over 3,500 gallon capacity, both tanks being connected to the standpipe system; that the house supply is connected to three tanks in such a manner that there is never less than a 3,500 gallon supply in reserve; that the installation was accepted by the fire department in 1915, and that hardship would result if required to raise the tanks 20 ft. above the outlet on the top story.

Resolved, that the orders of the fire commissioner be and they hereby are *affirmed*, and the appeal be and it hereby is *denied*.

THE RESOLUTION:

(716-25-A)

WHEREAS, Croker National Fire Prevention Engineering Company, for Pennsylvania Railroad Company, owner, filed, July 7, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 843 East 139th street, Borough of The Bronx; and

WHEREAS, the order of the fire commissioner, dated May 9, 1925, reads (Order No. 29451-LC):

"With reference to your application dated January 28, 1925, for a permit to maintain a non-storage garage at the above location, I regret to inform you that I am without power to grant such permit because the building is of frame construction.

"You are therefore ordered to

"1. Remove all motor vehicles, the fuel tanks of which are not empty and to discontinue the use of premises as a non-storage garage."

and

WHEREAS, the building is frame (the walls in the inside covered with sheet metal), one story in height, 32 ft. 6 in. by 30 ft. in area; OCCUPIED as a garage for three motor trucks; and

WHEREAS, appellant contends that there are no buildings adjoining the garage; that it has been used for this purpose for many years, and proposes to cover the ceiling with No. 26 gauge metal so that the entire interior will be protected.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the structure shall be limited in area to 30 ft. depth by 32 ft. 6 in. frontage; that the interior walls and ceiling shall be covered with No. 26 gauge metal; that there shall be no gasoline storage equipment maintained on the premises; and *granted* for a temporary period not exceeding one year from the date of this action.

THE RESOLUTION:

(725-25-A)

WHEREAS, John B. Snook Sons, for Estate of Samuel Insles, owner, filed, July 9, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 20-26 Greene street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated June 17, 1925, reads (Order No. 80157-F):

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, * * *."

and

WHEREAS, the building is non-fireproof, six stories (87 ft. 2 in.) in height, 75 ft. by 92 ft. in area; separated into two sections by a fore and aft wall, with an opening therein on each story, protected by double standard fire doors;

MINUTES

OCCUPIED for the cutting and stamping of embroidery, 160 persons above the first story; and

WHEREAS, appellant contends that the building is only slightly in excess of the 85 ft. limit; that the building is equipped with a two source sprinkler system and amply provided with exits.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the premises shall be equipped with an approved two source sprinkler system with central office connection; that the building shall not be increased in height, area or dimensions; that all horizontal openings shall be provided with approved automatic fire doors; and *granted* so long as conditions as to occupancy and use shall remain substantially unchanged.

APPELLANT—Dr. John F. Daly, owner.

SUBJECT—Appeal from decision of superintendent of buildings.

PREMISES AFFECTED—768 Crescent street, Long Island City, Borough of Queens.

APPEARANCES—

For Appellant: Dr. John F. Daly.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Flanagan, Guilfoyle and Fire Chief Kenlon	4
Negative	0
Absent: Commissioner Connell.....	1

THE RESOLUTION:

(790-25-A)

WHEREAS, Dr. John F. Daly, owner, filed, July 31, 1923, an appeal, with the board of standards and appeals, from a decision of the superintendent of buildings, affecting premises 768 Crescent street, Long Island City, Borough of Queens; and

WHEREAS, the decision of the superintendent of buildings, rendered July 31, 1923, reads:

"Replying to your communication requesting a certificate of occupancy for the building located on the S. S. Crescent Street, about 100 ft. west of Grand Avenue, Long Island City, for use as a Maternity and Lying-In Hospital, I would say that I have had an examination made of the building, and my inspector reports as follows:

"In reference to attached communication would state that I have examined said building, and find it to be of frame construction, 2 stories in height, about 50 ft. by 70 ft. deep. From information obtained would state the lower floor is intended to be used for hospital, the lower floor consists of 19 rooms, with 7 exits; the upper floor consisting of 11 rooms, are to be used by the owner's family. There is also an unfinished attic."

"I am therefore obliged to decline to issue the certificate for the reason that the building does not conform with the provisions of Section 72, paragraph (a) of the Building Code of the City of New York."

and

WHEREAS, the building is of frame construction, two stories and attic in height (29 ft. 6 in.), 85 ft. 6 in. by 80 ft. in area; unoccupied. PROPOSED OCCUPANCY: 1st story, sanitarium, 20 persons; 2nd story, 5 persons; and

WHEREAS, the superintendent of buildings has refused to issue a certificate of occupancy for the proposed occupancy, upon formal application by the appellant on the ground that the building is not fireproof; and

WHEREAS, the first tier of beams is but 3 ft. above curb level and the mean height is but 23 ft. above the first tier of beams, and it appears that the building was erected and maintained for its present use for nine years, though under different ownership, and no part of the building will be occupied above the 20 ft. height limit, and appellant requests the granting of the appeal with such limitations

as will bring it within intent of code applying thereto.

Resolved, that the decision of the superintendent of buildings be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the house heating apparatus enclosure or room located in cellar shall be provided with direct exit to the exterior of premises and shall be cut off from the remainder of cellar hall by a wall of approved masonry, with not more than one opening therein to interior of building, said opening to be equipped with a self-closing fireproof door; that the ceiling and side walls of this boiler room, where not now built of masonry, shall be fire retarded in accordance with the rules of the board of standards and appeals; that the medical care and treatment service shall be confined and restricted to 1st story, that all rooms maintained for the use and occupancy of patients shall be provided either with doors opening directly to the exterior of premises or with windows opening directly to the outer area of the premises; that the second floor shall be restricted to dwelling use and occupancy of the doctor-owner and operator of the premises; and *granted* only so long as premises are conducted by the owner of the premises—a medical doctor, admitted to practice of medicine in the State of New York.

APPELLANT—Thomas P. Flanagan, Acting Superintendent of Buildings, Borough of Brooklyn.

SUBJECT—Revocation of certificate of occupancy No. 21546.

PREMISES AFFECTED—1490-1496 Ocean parkway, Brooklyn.

APPEARANCES—

For Appellant: Mr. Rothkrug and John J. Flynn.

For Opposition: Francis M. Howard, Harold R. Tullman and H. Hermann.

ACTION OF BOARD—Appeal granted, revoking certificate of occupancy.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Flanagan, Guilfoyle and Fire Chief Kenlon	4
Negative	0
Absent: Commissioner Connell.....	1

THE RESOLUTION:

(961-25-A)

WHEREAS, Thomas P. Flanagan, acting superintendent of buildings, Borough of Brooklyn, filed, August 17, 1923, an appeal, with the board of standards and appeals, for revocation of the certificate of occupancy, No. 21546, issued for premises 1490-1496 Ocean parkway, Brooklyn; and

WHEREAS, the premises consists of two buildings, each non-fireproof, two stories in height, 20 ft. by 45 ft. in area; OCCUPIED as a two-family dwelling with a two-story enclosed porch at the front, projecting 4 ft. 3 in. beyond the setback line of Ocean parkway as fixed by chapter 726 of the Laws of 1872 and sections 63 and 64, art. 17 of the Code of Ordinances; and

WHEREAS, the provisions of law require all projections beyond the setback line to be of open construction; and

WHEREAS, the corporation counsel in an opinion addressed to the park commissioner and made a part of this record advises that authority and supervision over courtyards and encroachments on Ocean parkway was conferred on the park commissioner by chapter 726 of the Laws of 1872.

Resolved, that the appeal be and it hereby is *granted*, revoking certificate of occupancy.

Absent: Commissioner Connell..... 1

THE RESOLUTION:

(615-25-A)

WHEREAS, Edward P. Doyle, for Queensboro Bridge Loft Corp., owner (H. S. Karp, president), filed, June 15, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises north side of Wilbur avenue, being the northwest corner formed by the intersection of Sunswick street and Wilbur avenue, Long Island City, Borough of Queens; and

WHEREAS, the order of the fire commissioner reads:

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per sq. in. extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story (including basements, cellars and roofs) placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ inch standard hose attached thereto.

"Such standpipe shall be kept constantly filled with water by means of an approved tank or pump supply and be ready for use at all times.";

and

WHEREAS, the building, facing on two street fronts, is fireproof, five stories (71 ft.) in height, 70 ft. by 185 ft. (approximately 12,900 sq. ft.) in area; OCCUPIED as a tenant factory, 225 persons above the 1st story; and

WHEREAS, appellant contends that the building is slightly in excess of the permissible area; that it is equipped with a sprinkler system fed from a 20,000 gallon gravity tank and also from the city water mains; that it is accessible from two street fronts with siamese connections available on both streets.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the building shall be equipped with a two source sprinkler system; that the building shall not be increased in height, area or dimension; and *granted* only so long as present use and occupancy shall remain unchanged.

APPELLANT—Thomas W. Lamb, for Wm. Fox Realty Co., Inc., owner.

SUBJECT—Appeal from decision of superintendent of buildings.

PREMISES AFFECTED—126-138 East 14th street and 123-135 East 13th street, Manhattan.

APPEARANCES—

For Appellant: Thomas W. Lamb and Mr. Barasel.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Commissioners Flanagan, Guilfoyle and Fire Chief Kenlon 4

Absent: Commissioner Connell..... 1

THE RESOLUTION:

(945-25-A)

WHEREAS, Thomas W. Lamb, for Wm. Fox Realty Co., Inc., owner, filed, September 15, 1925, an appeal, with the board of standards and appeals, from a decision of the superintendent of buildings, affecting premises 126-138 East 14th street and 123-135 East 13th street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings reads:

"5. Distinct and separate exits should be provided for gallery above 1st mezzanine.

"7. Proposed auditorium extending over 14th Street building is unlawful. Storage rooms and offices within the above auditorium are unlawful.";

and

WHEREAS, the appellant has filed plans and applications with the superintendent of buildings, proposing to erect a fireproof theatre building, six stories in height, 45 ft. 9 in. by 206 ft. 6 in.; 3,647 seats total capacity, the new theatre building to surround and extend over the existing two-story non-fireproof store and office building facing 14th street, about 100 ft. by 68 ft.; the new building to be entirely separated by brick walls and concrete floor arches 12 in. in thickness; it is also proposed to construct all exits from the different parts of the theatre separate and distinct, in accordance with the law, except the northwest stairway from the upper gallery, which is proposed to terminate at the inner lobby of the main entrance from 14th street; and

WHEREAS, the superintendent of buildings disapproved the plans and applications in the two particulars as noted in Items 5 and 7; and

WHEREAS, the appellant admits the points at issue are contrary to the strict letter of the law, but claims the spirit of the law is complied with, in that the buildings are entirely separated with fireproofing 12 in. in thickness; that the northwest stairway is entirely separate from the upper gallery to entrance hall; that similar conditions have been formerly approved for theatre buildings, and he requests the board to set aside the decision of the superintendent of buildings and permit the construction of the theatre building as proposed.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

APPELLANT—Albert E. Kleinert, Superintendent of Buildings, Brooklyn.

SUBJECT—Revocation of certificates of occupancy No. 1358-1920 and No. 4825-1924.

PREMISES AFFECTED—26 College place, Brooklyn.

APPEARANCES—

For Appellant: Assistant Engineer Smithers of bureau of buildings.

ACTION OF BOARD—Certificates of occupancy revoked as of March 1, 1926.

THE VOTE TO REVOKE CERTIFICATES OF OCCUPANCY—

Affirmative: Chairman Walsh, Commissioners Flanagan, Guilfoyle and Fire Chief

Kenlon 4

Negative 0

Absent: Commissioner Connell..... 1

THE RESOLUTION:

(646-25-A)

WHEREAS, Albert E. Kleinert, superintendent of buildings, Borough of Brooklyn, filed, June 23, 1925, an appeal for revocation of certificates of occupancy No. 1358-1920 and No. 4825-1924 for premises 26 College place, east side, 220 ft. 9 in. north of Love lane, Brooklyn; and

WHEREAS, it appears that the building is non-fireproof, two stories in height, 33 ft. 9 in. by 80 ft. in area. OCCUPIED: 1st story, assembling heavy machinery, 15 persons; 2nd story, vacant; and

WHEREAS, it appears that a certificate of occupancy was issued July 7, 1920, for a work shop and office, and that on April 19, 1924, another certificate was issued for the present occupancy, and it appears that the noises coming from the building constitute a nuisance under the provisions of the building zone resolution, the premises being located in a business district (section 4-B).

Resolved, that the appeal be and it hereby is *granted*, and the certificates of occupancy, No. 1358-1920 and No. 4825-1924, be and they hereby are revoked as of March 1, 1926.

APPELLANT—Loening Aero Eng. Corp., lessee.

SUBJECT—Application for temporary permit—appeal from decision of fire commissioner.

PREMISES AFFECTED—436 East 31st street, Manhattan.

APPEARANCES—

For Appellant: A. P. Loening.

ACTION OF BOARD—Granted temporary permit for one year from date of this action.

CONDITIONS—As specified in resolution.

THE VOTE TO GRANT TEMPORARY PERMIT—

Affirmative: Chairman Walsh, Commissioners Flanagan, Guilfoyle and Fire Chief

Kenlon 4

Negative 0

Absent: Commissioner Connell..... 1

THE RESOLUTION:

(699-23-A)

WHEREAS, Loening Aero Eng. Corp., lessee, filed, June 5, 1923, an appeal from a decision of the fire commissioner, affecting premises 436 East 31st street, Manhattan; and

WHEREAS, the decision of the fire commissioner reads:

"1. Section 74, chapter 5, code of ordinances, limits one story buildings to only 1,250 sq. ft. and side walls 15 ft. high, building is therefore classed as a frame building. Storage of gasoline or other occupancy is therefore not permitted in a frame building."

and

WHEREAS, the premises consist of a plot of ground on the bulkhead line at the East River, on which is located a one-story steel frame and sheet iron airplane hangar, 50 ft. by 40 ft. in area, and an 18 ft. by 18 ft. shed; it is proposed to install a 550 gallon gasoline tank and pump on vacant portion of property; the entire plot being covered with a concrete floor; and

WHEREAS, appellant contends that the metal structure with concrete floor should not be classified as a frame building; and

WHEREAS, this appeal was granted by the board at its meeting July 10, 1923, on certain conditions, and appellant requested a modification of the time limit imposed.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the gasoline storage be limited to 550 gallons, the tank to be buried below grade, access to same to be enclosed and roofed over with a corrugated metal shed; and *granted* for a temporary period not to extend beyond October 27, 1926.

PREMISES AFFECTED—552 Fourth street, Brooklyn.

APPEARANCES—None.

ACTION OF BOARD—Chairman read request for temporary permit; granted 90-day permit pending decision on petition for approval of burner.

CONDITIONS—As specified in resolution.

THE VOTE TO GRANT 90-DAY PERMIT—

Affirmative: Chairman Walsh, Commissioners Flanagan, Guilfoyle and Fire Chief

Kenlon 4

Negative 0

Absent: Commissioner Connell..... 1

THE RESOLUTION:

(439-25-A)

WHEREAS, Socony Burner Corporation, for Harriet B. Folger, owner, filed, April 23, 1925, an appeal from a decision of the fire commissioner, affecting premises 552 4th street, Brooklyn; and

WHEREAS, the decision of the fire commissioner, rendered March 14, 1925, reads:

"26. Burners must be of a type approved by the Board of Standards and Appeals.";

and
WHEREAS, the building is non-fireproof, three stories and basement in height, 40 ft. by 100 ft. in area; OCCUPIED as a one-family residence; and

WHEREAS, application has been submitted to the fire commissioner for approval to install a fuel oil burning system for heating purposes, in which it is proposed to use the Socony Arrow Burner; and

WHEREAS, the appellant contends the installation conforms to law in all respects except as to burner; that the burner proposed to be used is now before the board for approval; he requests the board to grant a 90-day permit to use the Socony Arrow Burner, pending the action of the board; and

WHEREAS, a temporary permit for use of the burner was granted by the board July 28, 1925, and appellant requests an extension of the permit.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a temporary period of ninety (90) days from the date of this action, pending the determination of the board of standards and appeals on petition for approval of the Socony Arrow Burner, *on condition* that the fuel oil burning equipment and installation otherwise shall comply with fuel oil rules in all respects.

BUILDING ZONE CASES.

423-25-BZ.

APPLICANT—Samuel Schlau, for Isabel Burger, owner.

SUBJECT—Application (re: decision of tenement house commissioner) to permit in an "F" area district the erection of a building the area of which is in excess of that permitted in such district.

PREMISES AFFECTED—123-02 and 123-08 Rockaway Beach boulevard, Rockaway Park, Borough of Queens.

APPEARANCES—

For Applicant: Edward H. Burger.

For Opposition: Frederick T. Davies.

ACTION OF BOARD—Application laid over to November 17, 1925, at 2 p. m., on request of objectors' representative (for final disposition).

626-25-BZ.

APPLICANT—New York Telephone Company, owner.

SUBJECT—Application (re: decision of superintendent of buildings), to permit in a residence use, C and E area districts, the extension in height and area of an existing central telephone exchange building.

PREMISES AFFECTED—1421-1437 Ocean avenue and 1060-1068 Kenmore place, Brooklyn.

APPEARANCES—

For Applicant: N. H. Egleston and A. A. Frank.

For Opposition: None.

ACTION OF BOARD—Application laid over to November 10, 1925, at 10 a. m., for inspection by committee of board.

754-25-BZ.

APPLICANT—Robert Tappan, for Cord Meyer Development Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of a group of twenty-six one-car attached garages, for the storage of pleasure motor vehicles as an accessory to private dwellings located within the same block.

PREMISES AFFECTED—North side of Austin street, bounded by Puritan avenue and Atom place, Forest Hills, Borough of Queens.

APPEARANCES—

For Applicant: R. W. Kellog and A. Alexander.

For Opposition: None.

ACTION OF BOARD—Application laid over to No-

MINUTES

vember 10, 1925, at 10 a. m., pending recommendation by sinking fund commission.

505-25-BZ.

APPLICANT—John J. Kadel, for Walton Whyte Realty Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—East side of Jerome avenue, 350 feet south of East 181st street, The Bronx.

APPEARANCES—

For Applicant: John J. Kadel and James F. Meehan.

For Opposition: William B. De Lacey, Alexander Pfeifer, Henry C. White, Bertram L. Krauss and Arnold Gross.

ACTION OF BOARD—Application laid over to November 4, 1925, at 2 p. m., for full vote of members of board.

THE VOTE TO GRANT—

Affirmative: Chairman Walsh, Commissioners Flanagan and Guilfoyle..... 3

Negative: Fire Chief Kenlon..... 1

Absent: Commissioner Connell..... 1

409-25-BZ.

APPLICANT—Philip J. Sinnott, for John A. Ternlund, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1820-1832 Nostrand avenue, Brooklyn.

APPEARANCES—None.

ACTION OF BOARD—Chairman read request to withdraw; application withdrawn.

THE VOTE TO WITHDRAW—

Affirmative: Chairman Walsh, Commissioners Flanagan, Guilfoyle and Fire Chief Kenlon 4

Negative 0

Absent: Commissioner Connell..... 1

225-25-BZ.

APPLICANT—Thomas O'Rourke Gallagher, for Mymaud Construction Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—Southwest corner of Metropolitan avenue and 125th street, Middle Village, Borough of Queens.

APPEARANCES—

For Applicant: Thomas O'Rourke Gallagher.

For Opposition: Sidney H. Palmer, Fred C. Streib and others.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Commissioners Flanagan, Guilfoyle and Fire Chief Kenlon 4

Absent: Commissioner Connell..... 1

THE RESOLUTION:

(225-25-BZ)

WHEREAS, Thomas Burke Gallagher, for Mymaud Construction Company, owner, filed, February 25, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises southwest corner of Metropolitan avenue and 125th street, Middle Village, Borough of Queens; and

WHEREAS, a public hearing was held on this application

by the board of standards and appeals, at its regular meeting, October 27, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Metropolitan avenue is in a residence district and that 125th street is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered February 4, 1925, reads:

"The erection of a public garage in a business district is prohibited by the Zone Law.";

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 183 ft. 9 in. on Metropolitan avenue and 86 ft. 10 in. on 125th street; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed, notwithstanding support of basis of appeal under section 7-e, the existence of one comparatively small non-conforming use did not warrant further invasion of this business district by an extensive public garage, 183 ft. 9 in. by 86 ft. 10 in., in view of new and modern private residential development opposite and down both side streets, together with overwhelming protest of affected property owners.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and that the application be and it hereby is *denied*.

653-25-BZ.

APPLICANT—John De Hart, for Active Holding Co., Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit the extension from an unrestricted district into a business district of a proposed garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—319-323 East 148th street, The Bronx.

APPEARANCES—

For Applicant: John De Hart.

For Opposition: D. Picciano.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Flanagan, Guilfoyle and Fire Chief Kenlon 4

Negative 0

Absent: Commissioner Connell..... 1

THE RESOLUTION:

(653-25-BZ)

WHEREAS, John De Hart, for Active Holding Company, Inc., owner, filed, June 24, 1925, an application, under the building zone resolution, to permit the extension, from an unrestricted district into a business district, of a proposed garage for the storage of more than five motor vehicles; premises 319-323 East 148th street, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 27, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 148th street is in an unrestricted district and East 149th street is in a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered June 15, 1925, reads:

"1. Proposed extension of garage in unrestricted district into a business district is contrary to provisions of Building Zone Resolution.";

and

WHEREAS, the proposed building is of non-fireproof construction, two stories in height, with a frontage of 50 ft.

MINUTES

and a depth of 106.5 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed that the proposed garage, in an unrestricted district projecting but 6.5 ft. into a business district at the rear, was a reasonable adjustment of the zoning resolution specifically implied under section 7, subdivision b.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the rear and gable walls projecting into the business area of the plot shall be unpierced throughout their entire height and length; that there shall be no signs or advertising display on any part or portion of the structure within the business area; that the structure shall comply with the requirements of the building zone resolution in all other respects; that all necessary permits shall be obtained within nine months and the building completed within eighteen months from the date of this action.

51-25-BZ.

APPLICANT—520 Audubon Avenue, Inc., owner.

SUBJECT—Application (re: decision of tenement house commissioner) to permit in a residence district the occupancy and use for business purposes of part of an existing building used for dwellings.

PREMISES AFFECTED—540 Audubon avenue, Manhattan.

APPEARANCES—

For Applicant: Norman Denzer.

For Opposition: Joseph Nemerson.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative	0
Negative: Chairman Walsh, Commissioners Flanagan, Guilfoyle and Fire Chief Kenlon	4
Absent: Commissioner Connell.....	1

THE RESOLUTION:

(51-25-BZ)

WHEREAS, Norman Denzer, for No. 520 Audubon Avenue, Inc., owner, filed, Jan. 12, 1925, an application, under the building zone resolution, to permit in a residence district the occupancy and use for business purposes of part of an existing building, used as a dwelling; premises 540 Audubon avenue, Borough of Manhattan; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 27, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Audubon avenue is in a residence district and St. Nicholas avenue is in a business district; and

WHEREAS, the decision of the tenement house commissioner, rendered November 17, 1924, reads:

"The use of a portion of the cellar as a lunchroom cannot be permitted as the building is located within the residence district.";

and

WHEREAS, the existing building is of non-fireproof construction, five stories in height, with a frontage of 100 ft. and a depth of 90 ft.; to be occupied in part as a lunchroom and remainder as a tenement; and

WHEREAS, the board deemed that no hardship had been proved by the applicant under section 21 of the zoning resolution, and that it would be an unwarranted invasion to permit a business use in a residential district, as yet otherwise uninvaded.

Resolved, that the decision of the tenement house commissioner be and it hereby is *affirmed*, and that the application be and it hereby is *denied*.

609-25-BZ.

APPLICANT—Felix A. Muldoon, for Socora Realty Construction Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—West side of River avenue, 100 feet south of East 167th street, The Bronx.

APPEARANCES—

For Applicant: Felix A. Muldoon.

For Opposition: Jabez E. Dunningham, W. B. Raulston, Mr. Kuerzi, John J. Dunnigan and August F. Schwarzler.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Chairman Walsh	1
Negative: Commissioners Flanagan, Guilfoyle and Fire Chief Kenlon.....	3
Absent: Commissioner Connell.....	1

THE RESOLUTION:

(609-25-BZ)

WHEREAS, Felix A. Muldoon, for Socora Realty Construction Co., owner, filed, June 11, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises west side of River avenue, 100 ft. south of East 167th street, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 27, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that River avenue and East 167th street are both in business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered June 3, 1925, reads:

"1. Erection of proposed garage for storage of more than five (5) motor vehicles in business district is contrary to provisions of Building Zone Resolution.";

and

WHEREAS, the proposed building is of fireproof construction, two stories in height, with a frontage of 100 ft. and a depth of 135 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed invasion of this business street by a non-conforming and prohibitive use unwarranted, irrespective of 99 per centum of consents of owners of affected property on file in support of the appeal under section 7-g of the zoning resolution.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

662-25-BZ.

APPLICANT—Charles A. Clayton, for Josephine Pitbladdo, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a building to be used as a factory.

PREMISES AFFECTED—239-241-243 and 245 26th street, Brooklyn.

APPEARANCES—

For Applicant: Charles A. Clayton and John J. O'Reilly.

For Opposition: None.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Commissioner Guilfoyle.....	1
Negative: Chairman Walsh, Commissioner Flanagan and Fire Chief Kenlon.....	3
Absent: Commissioner Connell.....	1

MINUTES

THE RESOLUTION:

(662-25-BZ)

WHEREAS, Charles A. Clayton, for Josephine Pitbladdo, owner, filed, June 25, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a building to be used as a factory; premises 239-245 26th street, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, October 27, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that both 26th street and Fifth avenue are in business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered September 24, 1925, reads:

"Proposition contrary to Zone Resolution, Art. II, Sec. 4:

"The erection of a factory in a business district."; and

WHEREAS, the proposed building is to be of non-fireproof construction, four stories in height, with a frontage of 100 ft. and a depth of 88 ft. 6 in.; to be occupied as a 100 per cent factory; and

WHEREAS, the board deemed that applicant failed to establish his basis of appeal under section 21, namely, hardship, and that this factory invasion in this business street was unwarranted.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and that the application be and it hereby is *denied*.

Adjourned, 5:30 p. m.

JAMES O'CONNOR, *Secretary*.

RULES

SMOKING IN FACTORIES.

Adopted by the Board of Standards and Appeals,
August 13, 1918.

RULE 1. PERMIT.

(a) **Prohibition.** No person shall smoke, or carry a lighted cigar or cigarette in any factory as defined in Article 1, Section 2, of the State Labor Law, nor in any portion of a factory, within the City of New York, except in such protected portions or special classes of occupancies as are specified in Rule 2 of these rules, and then only after the issuance of a permit by the fire commissioner.

It shall be the joint and several duty of the owner and of the lessee or lessees of the building containing such factory or factories to cause to be posted in each and every entrance hall, stairhall or room throughout the building, as well as in every elevator-car, in English, and also in such other language or languages as the fire commissioner shall direct, a notice of such prohibition, and the penalty for its violation.

(b) **Application.** Application for such permit shall be made only by the owner of the building on suitable blank forms to be furnished by the fire commissioner.

(c) **Time Limit.** Such permit shall be for a definite period, not exceeding one year, and shall not be renewed upon expiration until a reinspection of the premises for which it is issued has been made for the purpose of determining whether existing conditions warrant a renewal.

(d) **Conditions.** The permit shall state the conditions under which, the hours between which, and the place or places in such factory where smoking may be permitted, and this permit shall be framed and kept posted in a conspicuous place in the factory.

(e) **Revocation.** Violation of any of the conditions specified in the permit, in addition to incurring such penalties as are prescribed by law, shall be full and sufficient cause for the revocation of such permit by the fire commissioner, and he shall not again issue a permit for the same premises until at least one year has elapsed.

RULE 2. PERMISSIBLE CASES.

Smoking may be permitted in:—

(a) Factories engaged in the manufacture of cigars, cigarettes, or smoking tobacco, when necessary for the efficient conduct of the business, provided that:

(1) No smoking other than that for sampling, testing and experimental purposes is carried on.

(2) Such smoking is conducted in a room provided especially for that purpose, separated from the rest of the building by fireproof or fire-resisting partitions, with all openings therein protected by self-closing fire doors, and, further, unless the building is of fireproof construction or equipped with an approved automatic sprinkler system, the floor and ceiling of such room shall be covered with fire-retarding material.

(3) Such chemical fire extinguishers as the fire commissioner may direct are installed.

(4) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

(b) Factories devoted entirely to one of the following occupancies:

Blacksmithing or horseshoeing;
Boiler making;
Brick, terra cotta or artificial stone works;
Forge shops;
Foundries;
Iron, steel, brass or copper works;
Machine shops;
Smelting;
Stone or monumental works;

provided that in any case:

(1) The building is not of wooden construction;

(2) Such chemical fire extinguishers as the fire commissioner may direct are installed;

(3) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

RULES

FIRE RETARDING RULES

Adopted by the Board of Standards and Appeals August 30, 1917; Amended November 1, 1917.

Rule 1. Fire Retarding Materials for Garages, Motor Vehicle Repair Shops and Oil Selling Stations. In garages, motor vehicle repair shops and oil selling stations any material or form of construction shall be deemed fire-retarding within the meaning of §73, subdivision 3, of the building code, that resists the action of flame and heat when subjected to a continuous fire for one hour at an average temperature of seventeen hundred (1700) degrees Fahrenheit without the passage of flame, and with a maximum temperature rise to four hundred (400) degrees Fahrenheit on the side away from the fire. The point at which the temperature of transmitted heat is measured shall be protected from external air and weather conditions.

When the test specimen is in the form of partition construction, the area under test shall be not less than one hundred (100) square feet and least dimension shall be not less than nine (9) feet. When in the form of floor construction, the area under test shall be not less than two hundred (200) square feet and the least dimension shall be not less than fourteen (14) feet.

During the fire, the floor construction shall support the live load for which it is designed, and after the fire shall safely sustain twice the designed live load with a maximum deflection of not more than one two-hundredth ($1/200$) part of the span.

Rule 2. Wood Joisted Floor Construction. Wood joisted floor construction shall be accepted as fire-retarding construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations when the beams are protected on the upper and under sides with the fire-retarding materials specified in rules for floor and ceiling coverings.

Rule 3. Floor Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the upper sides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) Seven-eighths ($7/8$) inch wood underflooring protected with a membrane of two-ply waterproofing covered with not less than two and one-half ($2\frac{1}{2}$) inches of 1:2½:5 concrete or better, reinforced with not less than one-fourth ($1/4$) of one (1) per cent of steel mesh.

(b) Two and one-half ($2\frac{1}{2}$) inches of 1:2:4 concrete applied directly to the top of the joists, with or without temporary support, reinforced with not less than one-fourth of one per cent steel rods, mesh or steel lath, and having the tops of the joists coated with approved waterproof paint or protected by tar paper on the top and on the sides for a distance of three inches from the top. (Amendment, Nov. 1, 1917.)

Rule 4. Ceiling Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the undersides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) One-half ($1/2$) inch plaster boards, or three-eighths ($3/8$) inch gypsum wall boards weighing not less than 16 pounds per square yard with pointed joints covered with No. 26 U. S. gauge sheet metal with one (1) inch lapped seams nailed to the wood beams when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are spaced more than sixteen (16) inches on centers;

(b) Two thicknesses of one-quarter ($1/4$) inch asbestos board laid with tight staggered joints and nailed to the beams, when spaced not more than sixteen (16) inches on centers, or nailed to furring

strips when the floor beams are more than sixteen (16) inches on centers.

(c) Metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($3/4$) inch thick.

Rule 5. Attachment to Ceiling. Fire-retarding ceilings in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations shall be attached to wood floor beams and girders in such manner as to maintain an air space between the wood beams, and all wood beams shall be seasoned before applying the protective coat.

Rule 6. Openings in Fire-Retarding Floors. Pipes or conduits which pass through floors shall be fitted with metal thimbles and made watertight for a height of three (3) inches above the floor.

Rule 7. Columns. All structural posts and columns in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials accepted in fireproof construction; except that an air space shall not be required around steel or cast iron columns.

Where necessary for protection against mechanical injury, the fire-retarding protection on columns shall be jacketed to a height of five (5) feet from the ground with No. 4 U. S. gauge metal.

Rule 8. Girders. All girders in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials acceptable in fireproof construction; except that an air space need not be provided around steel girders.

Rule 9. Shaft Enclosures. Existing stairways and vertical shafts in non-fireproof business buildings hereafter converted to be used as garages, motor vehicle repair shops or oil selling stations shall be enclosed in fire-retarding partitions continued through the non-fireproof floor construction, and when unfilled wood stud partitions are used, the space between the floor beams shall be fire-stopped with incombustible materials. All openings in such partitions shall be protected with accepted metal-covered fire doors or windows. Wherever necessary for protection against mechanical injury, the partition shall be jacketed to a height of five (5) feet on the garage side with No. 4 U. S. gauge metal. Any one of the following forms of partitions shall be accepted for the enclosure:

(a) Two by four inch wood studs, spaced not more than sixteen (16) inches on centers, covered both sides with metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($3/4$) of an inch thick;

(b) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($7/8$) inch wood sheathing, one-half ($1/2$) inch plaster boards with pointed joints and No. 26 U. S. gauge sheet metal with one-inch lapped seams;

(c) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($7/8$) inch wood sheathing, two thicknesses of one-quarter ($1/4$) inch asbestos boards laid with tight staggered joints and jacketed with No. 16 U. S. gauge metal on the garage side to a height of five (5) feet.

(d) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, filled in solidly between the studs with four inches of approved fireproof materials and covered on both sides with No. 26 U. S. gauge metal;

(e) Existing wood stud, lath and plaster partitions covered on the garage side with No. 26 U. S. gauge sheet metal with one-inch lapped seams.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, November 20, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

(a) For Standard one-half (½) inch heads—

8 feet in 12 foot bays;
9 feet in 11 foot bays;
10 feet in 10 foot bays;
11 feet in 9 foot bays;
12 feet in 5 to 8 foot bays;

(b) For Conran* one (1) inch heads—
20 feet in 5 to 12 foot bays.

(c) For Conran* one and one-quarter (1¼) inch heads—
25 feet in 5 to 12 foot bays.

(d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

- (a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.
- (b) For Conran one (1) inch heads, 20 feet.
- (c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

- (a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.
- (b) For Conran* one (1) inch heads, 7 feet.
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

- (a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.
- (b) For Conran* one (1) inch heads, 5 feet.
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

- (a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.
- (b) For Conran* one (1) inch heads, 5 feet.
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 "	2 heads
$1\frac{1}{4}$ "	3 "
$1\frac{1}{2}$ "	5 "
2 "	10 "
$2\frac{1}{2}$ "	20 "
3 "	36 "
$3\frac{1}{2}$ "	55 "
4 "	80 "
5 "	140 "
6 "	200 "
7 "	300 "
8 "	420 "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ "	2 heads
$1\frac{1}{2}$ "	3 "
2 "	4 "
$2\frac{1}{2}$ "	6 "
3 "	9 "
4 "	18 "
5 "	34 "
6 "	51 "
7 "	75 "
8 "	105 "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ "	2 heads
2 "	3 "
$2\frac{1}{2}$ "	4 "
3 "	6 "
4 "	12 "
5 "	21 "
6 "	40 "
7 "	60 "
8 "	84 "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.

At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being **meanwhile** kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased *or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.*

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employes instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

SECOND QUARTERLY REPORT

CITY OF NEW YORK BOARD OF STANDARDS AND APPEALS

WILLIAM E. WALSH, CHAIRMAN
MUNICIPAL BUILDING

November 4, 1925.

HON. JOHN F. HYLAN,
Mayor, New York City.

Sir:—I have the honor to submit for your information the second quarterly report of the Board of Appeals and Board of Standards and Appeals, combined, for the quarter ending June 30, 1925, which is set forth as follows:

CASES FILED AND PENDING, 1925.

SECOND QUARTER.	
Appeals from Administrative Orders	128
Applications under Building Zone Resolution	98
Petitions for Variation of Labor Law	101
Petitions for Approval of Appliances and Materials	11
Petitions for Adoption of Rules	0
Reopened and Restored to Calendar	21
Miscellaneous Docket	82
Cases filed, restored, etc., 2nd Quarter	441
Cases filed, restored, etc., 1st Quarter	453
Cases pending December 31, 1924	598
Total Cases filed and pending up to July 1, 1925	1492

SUMMARY.

DOCKET.		DISPOSITION OF CASES.	
Cases pending December 31, 1924	598	Withdrawn	75
Cases filed up to and including June 30, 1925	685	Dismissed	38
Restored to calendar	49	Denied	109
		Granted	4
		Granted on condition	426
		Appliances approved	11
		Appliances dismissed, disapproved or withdrawn	5
		Rules approved	0
		Rules disapproved or rescinded	0

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before the board—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of the board, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of the board is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

BOARD OF STANDARDS AND APPEALS,
Room 1001, Municipal Building,
New York City.

Enclosed please find two dollars and a half (\$2.50) for subscription for one year to THE BULLETIN OF THE BOARD OF STANDARDS AND APPEALS. Please mail THE BULLETIN to

DIRECTORY

BOARD OF STANDARDS AND APPEALS

WILLIAM E. WALSH, Chairman

Commissioners

HENRY L. CONNELL

JOSEPH FLANAGAN

JOHN GUILFOYLE

FIRE CHIEF JOHN KENLON

JAMES O'CONNOR, *Secretary*

EDWARD V. BARTON, *Chief Clerk*

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board

PUBLIC HEARINGS

Tuesdays, at 10 a. m. and 2 p. m.
Special meetings as published in this Bulletin.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of the board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The *Clerk's Calendar* consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, *Tuesday, November 10, 1925, at 2 o'clock.* At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, November 17, 1925, at 2 o'clock.

The *Clerk's Calendar* is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

CONTENTS

This issue of the Bulletin contains, in the order given—

Docket.

Call of Clerk's Calendar.

The Trial Calendar.

Notices in Building Zone Cases.

Special Notice.

Minutes of Regular Meeting, November 4, 1925, at 10 a. m.

Minutes of Regular Meeting, November 4, 1925, at 2 p. m.

Rules.

Notice of Public Hearing.

Third Quarterly Report.

Reserve Calendar.

Progress Report.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, *Chairman.*

THE RESOLUTION:

(511-25-A)

WHEREAS, Croker National Fire Prevention Engineering Co., for Empire Switchboard Co., Inc., owner, filed, May 15, 1925, an appeal, from an order of the fire commissioner, affecting premises 810 Fourth avenue, Brooklyn; and

WHEREAS, the order of the fire commissioner reads (Order No. 61228-F):

"1. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per sq. in. extending from cellar to roof * * *";

and

WHEREAS, the building is non-fireproof, one story in height, having a frontage of 150 ft. on 28th street and a frontage of 99 ft. on Fourth avenue, an area of approximately 15,000 sq. ft.; OCCUPIED for manufacturing electrical switchboards, 75 persons; and

WHEREAS, appellant contends that the building is low in height, faces on two streets and is accessible to the fire department on one side by means of a 10 ft. driveway;

MINUTES

that there are city fire hydrants in the immediate vicinity, and that the materials used in the business are incombustible, being iron, slate and copper.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the building shall not be increased in height, area or dimension; that an open 10 ft. alleyway shall be maintained at the westerly end of the structure for the entire depth of the premises; and that the manufacturing conducted on the premises shall be restricted to incombustible material—iron, slate and copper.

636-25-A.

APPELLANT—Samuel Rosenblum, for Carl Rosenbaum, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—142-144 Greene street, Manhattan.

APPEARANCES—

For Appellant: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Fire Chief Kenlon	4
Negative: Commissioner Guilfoyle	1
Absent	0

THE RESOLUTION:

(636-25-A)

WHEREAS, Samuel Rosenblum, for Carl Rosenbaum, owner, filed, June 18, 1925, an appeal, from an order of the fire commissioner, affecting premises 142-144 Greene street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, No. 77699-F, dated May 25, 1925, reads:

"1. Install an automatic dry pipe sprinkler system on the 3rd story, used for the storage and manufacturing of paper boxes, having at least one source of water supply as provided in the Rules for Fire Extinguishing Appliances adopted by the Board of Standards and Appeals, May 24, 1917, as amended May 2, 1918, and January 21, 1919, effective February 17, 1919.";

and

WHEREAS, the building is non-fireproof, five stories in height, 50 ft. 10 in. by 100 ft. in area at 1st story and 50 ft. 10 in. by 96 ft. in area above. OCCUPIED: 1st story, paper box manufacturing; 2nd story, vacant, normal occupancy, 15 persons; 3rd story, paper box manufacturing, 14 persons; 4th story, spinning silk, 15 persons; 5th story, manufacturing trimmings, 20 persons; and

WHEREAS, the appellant claims the building is now equipped with a sprinkler system, connected directly with the street water main, covering the sub-cellar, cellar and 1st story; that the exit facilities are adequate and that also a fire alarm system is installed; in view of the light occupancy of the building and the small amount of paper stock carried on the 3rd story, he requests the board to set aside the fire department Order No. 77699-F and permit the present occupancy without change.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the existing wet sprinkler system shall be extended to cover the 2nd and 3rd stories; and *granted* so long as the use and occupancy on the 4th and 5th stories shall remain substantially unchanged.

647-25-A.

APPELLANT—Croker National Fire Prevention Engineering Co., for Taft's Garage, owner.

SUBJECT—Appeal from decision of fire commissioner.

PREMISES AFFECTED—Northwest corner of Twentieth avenue and Northern boulevard (Jackson avenue), Long Island City, Borough of Queens.

APPEARANCES—

For Appellant: Herman E. Horwood.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon	5
Negative	0
Absent	0

THE RESOLUTION:

(647-25-A)

WHEREAS, Croker National Fire Prevention Engineering Co., for Taft's Garage, filed, June 23, 1925, an appeal, from a decision of the fire commissioner, affecting premises northwest corner Twentieth avenue and Northern avenue, L. I. City, Borough of Queens; and

WHEREAS, the decision of the fire commissioner, dated January 27, 1925, re Applic. 2771-1924, reads:

"11. Burners must be of a type approved by the Board of Standards and Appeals.";

and

WHEREAS, the building is non-fireproof, one story in height, 75 ft. by 116 ft. in area; OCCUPIED as a garage and stores; and

WHEREAS, the appellant claims the fuel oil equipment complied with the rules of the board except as to an approved burner; that the system is provided with the Hart Burner, which is now before the board, and requests a temporary permit to operate, pending the decision of the board.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a temporary period of ninety (90) days, at the owner's risk, pending the determination of the board on the petition for approval of the Hart Burner, *on condition* that the fuel oil installation shall comply with the rules in all other respects.

655-25-A.

APPELLANT—The United States Printing and Lithograph Company, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—83-101 North 3rd street and 209-219 Wythe avenue, Brooklyn.

APPEARANCES—

For Appellant: Manfred Ehrech.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Fire Chief Kenlon	4
Negative: Commissioner Guilfoyle	1
Absent	0

THE RESOLUTION:

(655-25-A)

WHEREAS, The United States Printing and Lithograph Company, owner, filed, June 24, 1925, an appeal, from an order of the fire commissioner, affecting premises 83-101 North 3rd street and 209-219 Wythe avenue, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated April 28, 1925, reads:

"1. Provide iron shutters at all openings in the exterior wall above 1st story which are distant in a direct line less than 30 ft. from any opening in any other building and not in the same plane with said openings and which are not more than 50 ft. above a neighboring roof at north side of building, or other approved protection, as per Sec. 375, Article 18, Chapter 5 of the Code of Ordinances.";

and

MINUTES

WHEREAS, the premises consists of three buildings of non-fireproof construction, one six stories in height and the others five stories in height, with a total area of 236 ft. by 126 ft.; OCCUPIED for printing and lithographing, Building No. 1 having an occupancy of 159 persons; Building No. 2, 99 persons, and Building No. 3, 44 persons; the means of EGRESS in Building No. 1 consisting of an interior fireproof enclosed stairway extending from 1st story to roof, and an exterior iron stairway in the rear and a fire escape on the Wythe avenue front; in Building No. 2, an interior stairway at center extending from 1st story to top story, a fire escape unenclosed on rear and horizontal exits protected with fire doors leading to Buildings 1 and 3; in Building No. 3, an interior stairway extending from 1st story to top story unenclosed; a party wall fire escape at front and rear and horizontal exit leading to Building No. 2, the building being equipped with a two source sprinkler system and a fire alarm signal system; and

WHEREAS, there are windows at rear which are within 50 ft. of the roof of adjoining one-story building which are part of the same premises and used for shipping, storage and pump house; and

WHEREAS, appellant contends that the means of egress are adequate for the small occupancy and that there was an action of the board of review of the fire department accepting existing conditions.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the premises shall remain in one ownership and for the operation of the business conducted on the premises.

678-25-A.
APPELLANT—Croker National Fire Prevention Engineering Co., for Mental Realty Co., owner.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—221-249 McKibben street, Brooklyn.

APPEARANCES—
For Appellant: Herman E. Horwood.
For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—
Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon 5
Negative 0
Absent 0

THE RESOLUTION:

(678-25-A)

WHEREAS, Croker National Fire Prevention Engineering Co., for Mental Realty Co., owner, from an order of the fire commissioner, affecting premises 221-249 McKibben street, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, No. 64926-F, dated October 24, 1924, reads:

"Install a standpipe system * * *";

and
WHEREAS, the building is non-fireproof, three stories in height, 40 ft. by 200 ft., and a one-story extension 55 ft. 6 in. by 71 ft., about 11,500 sq. ft. in area. OCCUPIED: 1st story, stock and shipping rooms, 16 persons; 2nd story, cutting rooms, 33 persons; 3rd story, assembling room, 23 persons; and

WHEREAS, the appellant claims that the building is but 40 ft. in height; that the 2nd and 3rd stories each have less than 10,000 sq. ft. floor area; that the 1st story floor area is divided by a fire wall with automatic fire doors on each side into areas less than 10,000 sq. ft. each, and that the combined area is less than 15,000 sq. ft.; and

WHEREAS, the area of 1st story only exceeds the 10,000 sq. ft. area requirement, the two upper floors being less than 10,000 sq. ft.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is

granted on condition and only so long as the present building as to height, area and dimensions shall remain unchanged; that the floor area of the 1st story as now subdivided shall not be increased in any area; that all the horizontal exits on 1st story except those leading to stair enclosure shall be equipped with approved automatic fireproof doors; and *granted* so long as occupancy and use shall remain unchanged.

685-25-A.

APPELLANT—David M. Jones, for Edward C. White, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—533-543 West 33rd street, Manhattan.

APPEARANCES—

For Appellant: David M. Jones.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners

Connell, Flanagan, Guilfoyle and Fire Chief

Kenlon 5

Negative 0

Absent 0

THE RESOLUTION:

(685-25-A)

WHEREAS, David M. Jones, for Edward C. White, owner, filed, June 30, 1925, an appeal, from an order of the fire commissioner, affecting premises 533-43 West 33rd street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, No. 79119-F, dated June 11, 1925, reads:

"1. Install a standpipe system with risers 4 in. in diameter, tested to withstand a pressure of 300 lbs. per sq. in., extending from cellar to roof * * *";

and
WHEREAS, the building is non-fireproof, three stories and attic (46 ft.) in height, 140 ft. by 118 ft. 10 in., irregular, about 13,888 sq. ft. in area at 1st story, 60 ft. by 100 ft. in area above. OCCUPIED: 1st story, machine shop, 12 persons; 2nd story, D. W. factory, 5 persons; 3rd story, pattern maker, 7 persons; and

WHEREAS, the appellant proposes to employ not more than 18 persons on 1st story, 10 persons on 2nd story, 10 persons on 3rd story; to brick up all openings in the dividing brick walls, at 1st story, except the doorways leading from boiler room to the front and rear machine shops; to provide a self-closing fireproof door to the front machine shop; he claims there is a self-closing iron door to the rear machine shop; that each area will then be less than 10,000 sq. ft. and the combined area less than 14,000 sq. ft.; in view of the fact that every part of the floor area may be covered by fire streams from 33rd street and open driveway at west, he requests the board to accept the above proposition in lieu of complying with fire department Order No. 79119-F.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the structure shall not be increased in height, area or dimension; that a driveway of approximately not less than 20 ft. in width, running from 33rd to 34th streets, shall be maintained, open and unencumbered; and *granted* so long as occupancy and use remain substantially unchanged.

756-25-A.

APPELLANT—Edward P. Doyle, for Jacob J. Tabolt, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES—520-524 West Broadway, Manhattan.

APPEARANCES—

For Appellant: Edward P. Doyle.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

MINUTES

CONDITIONS—As specified in resolution.
THE VOTE—

Affirmative: Chairman Walsh, Commissioners
Connell, Flanagan and Fire Chief Kenlon 4
Negative: Commissioner Guilfoyle 1
Absent 0

THE RESOLUTION:

(756-25-A)

WHEREAS, Edward P. Doyle, for Jacob J. Tabolt, owner, filed, July 20, 1925, an appeal, from an order of the fire commissioner, affecting premises 520-524 West Broadway, Manhattan; and

WHEREAS, the order of the fire commissioner reads:

(79445-F) "1. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 200 lbs. per sq. in. extending from cellar to roof.";

and

WHEREAS, the building is non-fireproof, seven stories, 88 ft. 1 in. in height, having a frontage of 100 ft. on West Broadway and 32 ft. 6 in. on Bleecker street; OCCUPIED as a tenant factory, approximately 90 persons above the 1st story; and

WHEREAS, appellant contends that the building is small in area; only 3 ft. over the required height; that there are city high pressure hydrants in the immediate vicinity and that the building, facing on two streets, is accessible to the fire department.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the building shall not be increased in height or area; that the building shall be equipped throughout with a thermostatic fire alarm control, with central office connection; and *granted* so long as conditions as to use and occupancy shall remain unchanged.

239-25-A.

APPELLANT—Empire State Ice Company, owner.

SUBJECT—Application for reopening—appeal from order of fire commissioner.

PREMISES AFFECTED—890 Grant avenue, The Bronx.

APPEARANCES—

For Appellant: D. B. Morrow.

ACTION OF BOARD—Extension of time granted for ninety days.

CONDITIONS—As specified in resolution.

THE VOTE TO GRANT EXTENSION OF TIME—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle..... 4
Negative 0
Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(239-25-A)

WHEREAS, Han A. Kunitz, for Empire State Ice Company, owner, filed, February 24, 1925, an appeal, from an order of the fire commissioner, affecting premises No. 890 Grant avenue, Borough of The Bronx; and

WHEREAS, the order of the fire commissioner, dated November 28, 1924, reads:

"Order No. 26571-LC:

"1. Provide easy access to outside of each fuel oil storage tank for inspection, as per Rule 7, Sec. 3 of the Fuel Oil Rules.

"2. Provide a hydrostatic test for tank as required by the Board of Standards and Appeals in the presence of an inspector of this department.

"5. Provide a hydrostatic test of not less than 150 pounds per square inch for all fuel oil carrying piping of normal working pressure of less than 100 pounds, as per Rule 8, Sec. 3 of the Fuel Oil Rules.

"9. Provide Fuel Oil Burner or Burners of a type approved by the Board of Standards and Appeals, as per Rule 12.";

and

WHEREAS, the building is fireproof, one story in height, 136 ft. by 109 ft. 6 in. in area; OCCUPIED as an ice

manufacturing plant, 12 persons in entire building; and

WHEREAS, a fuel oil burning system has been installed consisting of a 2,250-gallon fuel oil storage tank, buried underground, outside the building, a pump, a "Newport" burner and the necessary valves and piping to make a complete installation; and

WHEREAS, appellant contends that the tank and piping are buried in concrete and that they were tested at the time of installation, and requests the acceptance of an affidavit to this effect, and contends further that an application for the approval of the "Newport" burner is on file with the board; and

WHEREAS, this appeal was granted by the board at its meeting May 26, 1925, for a temporary period, and appellant requests an extension of time.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Item 2 and 5, *on condition* that an air test shall be made under existing conditions in the presence of a member of the fire prevention bureau, said test to be maintained for not less than 6 hours without loss of pressure; as to Item 9, *granted*, for a temporary period of ninety (90) days, at owner's risk, subject to action of the board of standards and appeals on petition pending as to approval of Newport burner, *on condition* that the fuel oil burning equipment otherwise complies with the fuel oil rules in all respects.

BUILDING ZONE CASES.

532-25-BZ.

APPLICANT—William F. Doyle, for Menick Holding Co., Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district extending from a business district the erection and maintenance of a theatre building.

THE RESOLUTION:

(495-25-BZ)

WHEREAS, Henry Nordheim, for Katie Staudermann, owner, filed, May 11, 1925, an application, under the building zone resolution, to permit in a residence district the

alteration, extension and change of occupancy in part from a residence use to a business use; premises 722 East 175th street, south side, 24.62 ft. west of Clinton avenue, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 4, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 175th street is in both a residence district and a business district; that Clinton avenue is in a residence district and Crotona Park North is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 8, 1925, reads:

"1. Proposed alteration and change of occupancy of dwelling in residence district to be used partly for business purposes is contrary to provisions of Building Zone Resolution."

and

WHEREAS, the existing building is of frame construction, two stories and attic in height, with a frontage of 18 ft. 2 in. and a depth of 56 ft.; to be occupied for store purposes on 1st story and the 2nd story as a residence; and

WHEREAS, the board deemed that the applicant did not support his basis of appeal, namely, that of hardship.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and that the application be and it hereby is denied.

598-25-BZ.

APPLICANT—John J. Dunnigan, for Daniel Houlihan, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—2974 Jerome avenue, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE RESOLUTION:

(598-25-BZ)

WHEREAS, John J. Dunnigan, for Daniel Houlihan, owner, filed, June 10, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 2974 Jerome avenue, east side Jerome avenue, 250 ft. north of Bedford Park boulevard, Borough of The Bronx; and

and WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 4, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Jerome avenue is in a business district; that Bedford Park boulevard is in a business district, and that Villa avenue is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 20, 1925, reads:

"1. Erection of proposed garage for storage of more than five motor vehicles in business district is contrary to provisions of Building Zone Resolution."

and

MINUTES

WHEREAS, the proposed building is of non-fireproof construction, two stories in height, with a frontage of 75 ft. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed that in view of the surrounding and abutting garages, affected properties on same street front will not be adversely impaired and the denial of this appeal would be a hardship within the meaning of the zoning resolution.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the structure shall not exceed two (2) stories above grade in height; that the rear and gable walls shall be unpierced throughout their entire height and length; that the requirements of the zoning law, as to rear yard area and court, shall be complied with in all other respects; that the front elevation shall be finished in face brick, panel design, with architectural terra cotta or stone trimmings; that no roof, or advertising signs, other than the title of the garage,

shall be displayed on the front of the building; and that all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

AREA FIXED.

The chairman presented and read a communication from Max Cohn, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises 870-872 Metropolitan avenue, Brooklyn.

The following area was approved by the board:

Both sides of Metropolitan avenue from Olive street to Bushwick avenue and also the premises to the rear and for a distance of 50 feet on each side of the side lot lines of the premises in question.

BOARD OF STANDARDS AND APPEALS

REGULAR MEETING.

WEDNESDAY AFTERNOON, NOVEMBER 4, 1925.

Present: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon.

APPEALS FROM ADMINISTRATIVE ORDERS.

773-25-A.

APPELLANT—Samuel Rosenblum, for Max Goebel, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—62 Grand street, Manhattan.

APPEARANCES—

For Appellant: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal laid over to November 17, 1925, at 2 p. m., for final disposition, on request of appellant.

1050-25-A.

APPELLANT—Albert E. Kleinert, Superintendent of Buildings, Borough of Brooklyn.

SUBJECT—Revocation of certificate of occupancy "No. 1114 Existing Building," issued June 4, 1925.

PREMISES AFFECTED—321 Madison street, Brooklyn.

APPEARANCES—

For Appellant: J. P. Smithers, Assistant Engineer.

For Appeal: W. C. Higgins, Alderman Webber and others.

For Opposition: Frank J. Irving and Frank Canberg.

ACTION OF BOARD—Appeal laid over to November 17, 1925, at 2 p. m., on request of owner's representative.

606-25-A.

APPELLANT—Joseph A. McNamara, for Gillette Camera Stores, Inc., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—231-235 East 42nd street, Manhattan.

APPEARANCES—

For Appellant: Joseph A. McNamara.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal laid over to November 10, 1925, at 10 a. m., on request of appellant.

762-25-A.

APPELLANT—Turner Construction Co., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—2201-2219 Grand street, Maspeth, Borough of Queens.

APPEARANCES—

For Appellant: John R. Voorhees.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE RESOLUTION:

(762-25-A)

WHEREAS, Turner Construction Co., owner, filed, July 22, 1925, an appeal, from an order of the fire commissioner, affecting premises 2201-2219 Grand street, Maspeth, Borough of Queens; and

WHEREAS, the order of the fire commissioner, dated April 6, 1925, reads:

"74588-F. 1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per sq. in. extending from cellar to roof * * *"; and

WHEREAS, the building is fireproof, two stories, 29 ft. 5 in. in height, 250 ft. by 72 ft. (18,000 sq. ft.) in area. OCCUPIED: 1st story, machine shop, 20 persons; 2nd story, offices, canvas storage and as a wood mill, 6 persons; and

WHEREAS, appellant, in lieu of a standpipe system, proposes to install a sprinkler system having two standard sources of supply.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the structure shall be equipped with an approved two source wet sprinkler system, installed in accordance with the rules of the board of standards and appeals; and that the building shall not be increased in height or area.

THE RESOLUTION:

(766-25-A)

WHEREAS, New York Railways Corp., owner, filed, July
24, 1925, an appeal, from an order of the fire commissioner,
affecting premises 721-725 Lenox avenue, Borough of Man-
hattan; and

WHEREAS, the order of the fire commissioner reads:

"Re Applie. No. 395-1925—

"6. The entire area of premises must be equipped
with a regulation standpipe, independent of the sprin-
kler system, supplied from a gravity tank 20 ft. above
the roof with at least 5000 gallons reserve. Siamese
connections for every 200 ft. of frontage, 5 in. cross-
connection, 4 in. risers, with 2½ in. outlets and 2½ in.
unlined linen hose, etc.";

and

WHEREAS, the premises consist of a plot of ground,
facing on three street fronts, upon which is located the
ear, house, a two and four-story fireproof building, includ-
ing a portion of the 1st story (50 ft. by 232 ft. in area);
OCCUPIED as a garage; and

WHEREAS, appellant contends that the garage portion of
the premises is entirely separated by brick walls from the
remainder of the premises; that the buildings are protected
by a sprinkler system; the source of supply being a 60,000-
gallon gravity tank (located 75 ft. above the ceiling of the
garage) and five (5) 25,000-gallon pressure tanks with 75
lbs. air pressure maintained.

Resolved, that the order of the fire commissioner be and
it hereby is *modified*, and the appeal be and it hereby is
granted, only so far as it affects the omission of 5,000-gal-
lon gravity tank, *on condition* that the standpipe equipment
shall comply with the rules in all other respects.

768-25-A.

APPELLANT—Fred Von Rodeek, for Anna Von Rodeek,
owner.

SUBJECT—Appeal from order of superintendent of
buildings.

PREMISES AFFECTED—1628-1648 East Ninth street,
Brooklyn.

THE RESOLUTION:

(768-25-A)

WHEREAS, Fred von Rodeek, for Anna von Rodeek,
owner, filed, July 24, 1925, an appeal, from an order of the
superintendent of buildings, affecting premises 1628-48 East
9th street, Brooklyn; and

WHEREAS, the order of the superintendent of buildings
(Violation No. 4314), dated June 25, 1925, reads:

"You will please take notice that there exists a vio-
lation of the Building Code at the premises hereinafter
described, in that of occupying and advertising this
business. In violation of art. 2, sec. 3 of the Build-
ing Zone Resolution.

"You are required to discontinue this advertising
sign, also business if not existing prior to the zoning
law.";

and

WHEREAS, the premises consist of a plot of ground 180
ft. by 186 ft. and is OCCUPIED as a nursery for the
growth of flowers; and

WHEREAS, appellant contends that the sign, located 30
ft. from the sidewalk and 3 ft. by 5 ft. in area, is not an
advertising sign in the usual sense of the word, but is an
accessory to the conduct of a use permissible in a resi-
dence district.

Resolved, that the order of the superintendent of build-
ings be and it hereby is *modified*, and the appeal be and
it hereby is *granted on condition* that there shall be no
commercial advertising or display on the premises other
than one sign, not exceeding in dimensions a height of 3
ft. and a width of 5 ft., the lettering thereon restricted to
the name and title of the conforming use conducted on
these premises.

THE RESOLUTION:

(769-25-A)

WHEREAS, Abraham Farber, for Samuel Lemberg, owner,
filed, July 24, 1925, an appeal, from an order of the fire
commissioner, affecting premises 239 Alabama avenue,
Brooklyn; and

WHEREAS, the order of the fire commissioner, No. 81338-
F, dated July 9, 1925, reads:

"Install an automatic dry pipe sprinkler system
throughout building used for the storage and manu-
facture of paper boxes, having at least one source of
water supply * * *.";

and

WHEREAS, the premises consist of a plot of ground hav-
ing a frontage of 100 ft. on Alabama avenue and 100 ft. on
Belmont avenue, upon which is located nine (9) individual
brick garages, a gasoline selling station and a non-fireproof
one-story paper box factory, approximately 65 ft. by 95 ft.,
irregular in area; and

WHEREAS, appellant contends that the box factory is sep-
arated from the remainder of the premises by unpierced
8 in. brick walls; that the factory is but 6,000 sq. ft. in
area, one story in height, and amply provided with exits.

Resolved, that the order of the fire commissioner be
and it hereby is *modified*, and the appeal be and it hereby
is *granted on condition* that an approved wet sprinkler sys-

MINUTES

tem, with not less than a 4 in. street connection to city main, shall be installed; and *granted* only so long as the building shall not be increased in area, height or dimension.

THE RESOLUTION:

(575-25-BZ)

WHEREAS, Gardiner Conroy, for O'Hara Realty Company, owner, filed, June 3, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 507-511 Flatbush avenue and 1118-1122 Washington avenue, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 4, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that both Flatbush avenue and Washington avenue are in business districts; and

WHEREAS, the decision of the superintendent of buildings rendered May 27, 1925, reads:

"Proposition contrary to the Zone Resolution, Art.

II, Sec. 4a 15. The erection of a garage for more than five motor vehicles.";

and

WHEREAS, the proposed building is of fireproof construction, three stories in height, with a frontage of 56 ft. 9½ in. on Flatbush avenue and 109 ft. 11 in. on Washington

avenue; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, there was documentary proof submitted, in support of section 7 E, from the health department, and supporting affidavits as to the existence of a public stable on this street prior to the adoption of the zoning resolution and still existing.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building shall be constructed fireproof, not exceeding three (3) stories in height above grade and that there shall be no ramps installed or incorporated on these premises; that the center of any vehicular exit or entrance shall not be within 25 ft. of the intersection of any corner of the street fronts; that the northerly gable wall shall be unpierced throughout its entire height and length; any gasoline storage equipment installed shall be located at the extreme northerly end of the building on either street frontage; that the facades of the building on the street fronts shall be finished with face brick, architectural terra cotta or natural stone of ornamental design; a return drawing to be made to this board for indorsement before submitting same for approval to the superintendent of buildings; all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

505-25-BZ.

THE RESOLUTION:

(505-25-BZ)

WHEREAS, John J. Kadel, for Walton Whyte Realty Corporation, owner, filed, May 13, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises east side of Jerome avenue, 350 ft. south of East 181st street, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 4, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Jerome avenue is in a business district; East 181st street is in a business district, and that Walton avenue is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 9, 1925, reads:

"1. Erection of proposed garage for storage of more than five motor vehicles in business district is contrary to provisions of Building Zone Resolution.";

and

MINUTES

WHEREAS, the proposed building is of non-fireproof construction, two stories in height, with a frontage of 150 ft. and a depth of 100.94 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the applicant, having complied with specific rules and regulations as laid down by the zoning regulations under rules of exceptions affecting an application under section 7 G and in support of this application on the theory of hardship, section 21 (being the fee owner of the property), irrespective of the subsequent withdrawal of consents after the presentation of the appeal.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building shall not exceed a two (2) story structure in height above grade; that the rear and gable walls, unless opening within the property of the same lot or plot and in the same ownership, shall be unpierced throughout their entire height and length; that any runway ramp installed

or maintained in this building shall be set back at a street grade level not less than 10 ft. from the front wall of the building; that the front elevation shall be finished with face brick, architectural terra cotta or stone trimmings, panel design, other than store front show windows if installed; that there shall be no roof signs erected; no signs or advertising display shall be exposed on the front of the structure, other than one projecting electric sign, indicating the title and conduct of business conducted on the premises; any other advertising to be confined to fixed letters on plate glass show windows; all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building shall be completed within eighteen (18) months from the date of this action, and that the building zone regulations and requirements shall be complied with in all other respects.

Adjourned, 4:45 p. m.

JAMES O'CONNOR, *Secretary*.

RULES

SMOKING IN FACTORIES.

Adopted by the Board of Standards and Appeals,
August 13, 1918.

RULE 1. PERMIT.

(a) **Prohibition.** No person shall smoke, or carry a lighted cigar or cigarette in any factory as defined in Article 1, Section 2, of the State Labor Law, nor in any portion of a factory, within the City of New York, except in such protected portions or special classes of occupancies as are specified in Rule 2 of these rules, and then only after the issuance of a permit by the fire commissioner.

It shall be the joint and several duty of the owner and of the lessee or lessees of the building containing such factory or factories to cause to be posted in each and every entrance hall, stairhall or room throughout the building, as well as in every elevator-car, in English, and also in such other language or languages as the fire commissioner shall direct, a notice of such prohibition, and the penalty for its violation.

(b) **Application.** Application for such permit shall be made only by the owner of the building on suitable blank forms to be furnished by the fire commissioner.

(c) **Time Limit.** Such permit shall be for a definite period, not exceeding one year, and shall not be renewed upon expiration until a reinspection of the premises for which it is issued has been made for the purpose of determining whether existing conditions warrant a renewal.

(d) **Conditions.** The permit shall state the conditions under which, the hours between which, and the place or places in such factory where smoking may be permitted, and this permit shall be framed and kept posted in a conspicuous place in the factory.

(e) **Revocation.** Violation of any of the conditions specified in the permit, in addition to incurring such penalties as are prescribed by law, shall be full and sufficient cause for the revocation of such permit by the fire commissioner, and he shall not again issue a permit for the same premises until at least one year has elapsed.

RULE 2. PERMISSIBLE CASES.

Smoking may be permitted in:—

(a) Factories engaged in the manufacture of cigars, cigarettes, or smoking tobacco, when necessary for the efficient conduct of the business, provided that:

(1) No smoking other than that for sampling, testing and experimental purposes is carried on.

(2) Such smoking is conducted in a room provided especially for that purpose, separated from the rest of the building by fireproof or fire-resisting partitions, with all openings therein protected by self-closing fire doors, and, further, unless the building is of fireproof construction or equipped with an approved automatic sprinkler system, the floor and ceiling of such room shall be covered with fire-retarding material.

(3) Such chemical fire extinguishers as the fire commissioner may direct are installed.

(4) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

(b) Factories devoted entirely to one of the following occupancies:

Blacksmithing or horseshoeing;
Boiler making;
Brick, terra cotta or artificial stone works;
Forge shops;
Foundries;
Iron, steel, brass or copper works;
Machine shops;
Smelting;
Stone or monumental works;

provided that in any case:

(1) The building is not of wooden construction;

(2) Such chemical fire extinguishers as the fire commissioner may direct are installed;

(3) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, November 20, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent ($12\frac{1}{2}\%$) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds ($2/3$) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half ($1\frac{1}{2}$) inches in size [with a one and one-quarter ($1\frac{1}{4}$) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half ($1\frac{1}{2}$) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half ($1/2$) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

(a) For Standard one-half (½) inch heads—

8 feet in 12 foot bays;

9 feet in 11 foot bays;

10 feet in 10 foot bays;

11 feet in 9 foot bays;

12 feet in 5 to 8 foot bays;

(b) For Conran* one (1) inch heads—

20 feet in 5 to 12 foot bays.

(c) For Conran* one and one-quarter (1¼) inch heads—

25 feet in 5 to 12 foot bays.

(d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof.

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half (1/2) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
3/4 inch	1 head
1	2 heads
1 1/4	3
1 1/2	5
2	10
2 1/2	20
3	36
3 1/2	55
4	80
5	140
6	200
7	300
8	420

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
1 1/4	2 heads
1 1/2	3
2	4
2 1/2	6
3	9
4	18
5	34
6	51
7	75
8	105

(c) For Conran* one and one-quarter (1 1/4) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 1/4 inch	1 head
1 1/2	2 heads
2	3
2 1/2	4
3	6
4	12
5	21
6	40
7	60
8	84

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half (2 1/2) inch pipe does not supply more than sixteen (16) standard one-half (1/2) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half (1/2) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter (1 1/4) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

At the base of the main riser;

At each alarm valve;

At each dry-pipe valve;

At each gravity tank;

At each pressure tank.

At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

Above dry-pipe valves;

Below dry-pipe valves;

At the pressure tank;

At the air compressor;

Above the alarm valve;

Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads.128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor.].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, **such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.**

All pressure tanks shall be tested after erection to a test pressure of one and one-half (1½) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being **meanwhile kept shut.** Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased **or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.**

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

THIRD QUARTERLY REPORT

CITY OF NEW YORK BOARD OF STANDARDS AND APPEALS

WILLIAM E. WALSH, CHAIRMAN
MUNICIPAL BUILDING

November 10, 1925.

HON. JOHN F. HYLAN,
Mayor, New York City.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before the board—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of the board, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of the board is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

WILLIAM E. WALSH, Chairman

Commissioners

HENRY L. CONNELL

JOSEPH FLANAGAN

JOHN GUILFOYLE

FIRE CHIEF JOHN KENLON

JAMES O'CONNOR, Secretary

EDWARD V. BARTON, Chief Clerk

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board

PUBLIC HEARINGS

Tuesdays, at 10 a. m. and 2 p. m.
Special meetings as published in this Bulletin.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of the board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The *Clerk's Calendar* consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, November 17, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, November 24, 1925, at 2 o'clock.

The *Clerk's Calendar* is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

SPECIAL NOTICE

The meeting scheduled for October 27, 1925, at 2 p. m. has been laid over to a special meeting Friday, November 20, 1925, at 10 a. m.

CONCRETE RULES

USE OF HYDRATED LIME IN CONCRETE.

Adopted by the Board of Standards and Appeals, April 19, 1920, under Cal. No. 153-20-S.

The use of hydrated lime in all classes of concrete construction shall not be prohibited when used in accordance with the conditions hereinafter set forth.

The hydrated lime shall conform with the standard specifications for this material which have been adopted by the American Society for Testing Materials.

The maximum amount of hydrated lime which may be used shall conform with the following table, all weights given being the amount of lime which may be incorporated for each ninety-five pound bag of Portland cement.

1-1½-3 Mix, 4 pounds of hydrated lime per bag of cement.

1-2-4 Mix, 5 pounds of hydrated lime per bag of cement.

1-2½-5 Mix, 6 pounds of hydrated lime per bag of cement.

For hand mixed concrete, the hydrated lime and Portland cement shall be well mixed while dry.

Hydrated lime shall not be used in concrete which is to be deposited under water.

MINUTES

THE RESOLUTION:

(179-25-A)

WHEREAS, Croker National Fire Prevention Engineering Co., for Tec-Art Studios, Inc., lessee, filed, February 12, 1925, an appeal, from an order of fire commissioner, affecting premises 344 West 44th street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 26526-LC, dated November 22, 1924, reads:

"Item No. 1. Provide a separate and distinct system of automatic sprinklers throughout the building, having two sources of water supply, arranged and equipped as provided in the rules for fire extinguishing appliances adopted by the board of standards and appeals, December 30, 1921.";

and

WHEREAS, the building is non-fireproof, 3 and 4 stories in height, 148 feet 2 inches by 101 feet 8 inches in area, OCCUPIED as a motion picture studio, 47 persons employed; and

WHEREAS, the appellant claims the premises are protected by watchman inspection and a fire alarm system.

Resolved, that the order of the fire commissioner be and it hereby is modified, and the appeal be and it hereby is granted only so far as it affects the source of supply of sprinkler system (installation of gravity and pressure tank) on condition that a sprinkler system, with direct connection to city water main, shall be installed complying with the sprinkler rules of the board in all other respects, and granted only so long as conditions as to occupancy and use remains unchanged.

742-25-A.

For Appellant: J. R. Rockart.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—

Affirmative: Chairman Walsh, Commissioner

Flanagan and Fire Chief Kenlon.....

Negative: Commissioners Guilfoyle and Connell

Absent

THE RESOLUTION:

(742-25-A)

WHEREAS, Cass Gilbert, Inc., for New York Life Insurance Co., owner, filed, July 24, 1925, an appeal, from a

MINUTES

decision of the superintendent of buildings, affecting premises on the block bounded by 26th to 27th streets, from 4th to Madison avenue, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, App. No. 295-1924, rendered June 30, 1925, reads:

"10. Not more than two elevators may be placed in any one shaft.—Section 373, par. 13."; and

WHEREAS, the proposed building is fireproof, 23 stories in height, 184 ft. by 388 ft., OCCUPIED by offices, about 350 persons on each story; and

WHEREAS, plans and application, in part, proposing 12 separate shafts, each shaft to contain three elevators in common, were submitted to and disapproved by the superintendent of buildings; and

WHEREAS, the appellant claims that this is an exceptional case; that the proposed elevator system is most efficient in case of accident or panic; he further contends the system is safe.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed and the appeal be and it hereby is denied.

THE RESOLUTION:

(142-25-BZ)

WHEREAS, Irene Thatcher, owner, filed, February 2, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; PREMISES 1728-1730 Coney Island avenue, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 10, 1925, after due notice by publication in the Bulletin of the board of standards and appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Coney Island avenue is in a business district; that Avenue N is in a residence district and that East 10th street is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered January 31, 1925, reads:

"Contrary to Art. II, Sec. 4, Zone Resolution.

"A public garage for more than five motor vehicles in a business district.";

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 100 feet and a depth of 100 feet, to be occupied as a garage for the storage of more than five (5) motor vehicles; and

WHEREAS, the board deemed that applicant did not establish his basis of appeal under section 21 of the building zone resolution on the ground of unnecessary hardship.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed* and that the application be and it hereby is *denied*.

607-25-BZ.

APPLICANT—McCooley & Conroy, for Israel Feinberg and Joe Bernstein, owners.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—2552-2556 Bedford avenue, Brooklyn.

APPEARANCES—

For Applicant: Gardiner Conroy.

For Opposition: J. C. McLeer, Chas. F. Karwatzki and John H. Foote.

ACTION OF BOARD—Application denied.

THE RESOLUTION:

(607-25-BZ)

WHEREAS, McCooley & Conroy, for Israel Feinberg, owner, filed, June 11, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; PREMISES 2552-2556 Bedford avenue, west side, 160 feet north of Avenue D, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 10, 1925, after due notice by publication in the Bulletin of the board of standards and appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Bedford avenue is in both a residence and a business district; that Avenue D is in both a residence and business district, and East 23rd street is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered August 16, 1925, reads:

"Proposed two story public garage, to be located in a residence district is contrary to Art. II, Sec. 3 of the zone resolution.";

and

WHEREAS, the proposed building is of fireproof construction, 2 stories in height, with a frontage of 60 feet and a depth of 100 feet; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, section 7-e of the building zone resolution does not apply in this application, as proposed garage is entirely within a residence district and applicant failed to establish his basis of appeal under section 21 on the ground of unnecessary hardship and practical difficulties, property having been purchased since the adoption of the zoning resolution, July 25, 1916.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed* and that the application be and it hereby is *denied*.

626-25-BZ.

APPLICANT—New York Telephone Company, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence use, C and E area districts, the extension in height and area of an existing central telephone exchange building.

PREMISES AFFECTED—1421-1437 Ocean avenue and 1060-1068 Kenmore place, Brooklyn.

THE RESOLUTION:

(626-25-BZ)

WHEREAS, New York Telephone Co., owner, filed, June 17, 1925, an application, under the building zone resolution, to permit in a residence use C and E area district the extension in height and also area of an existing telephone exchange building; PREMISES 1421-1437 Ocean avenue and 1060-1068 Kenmore place, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 10, 1925, after due notice by publication in the Bulletin of the board of standards and appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Ocean avenue is in a residence and C area district and that Kenmore place is in a residence and E area district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 26, 1925, reads:

"Proposition contrary to the zone resolution, Art. II, Sec. 3, and Art. IV, Sec. 15c. The erection or extension of a business building in a residence district occupying excessive area in a residence E area."

and

WHEREAS, the existing central telephone exchange building is fireproof, 2 stories in height, approximately 66 ft. by 120 ft. in area, located on a lot fronting 157 ft. 2¾ in. on Ocean avenue and 117 ft. 2¾ in. on Kenmore place, running through from street to street (depth 210 ft.), it is proposed to enlarge the building by adding an additional story, making the structure 3 stories in height above grade and increasing area to 146 ft. 11 in. by 179 ft. 10 in., occupying 72 per cent. of the entire lot and 59 per cent. of the portion in the E district; and

WHEREAS, applicant established his basis of appeal under sections 7-a and 7-d of the building zone resolution, and the board deemed it would be an unnecessary hardship, within the meaning of section 21, to deprive applicant of the proposed use of the premises, under such conditions as would safeguard adjacent properties.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building be restricted in height to a three-story structure above grade; that the exterior of all walls, including the gable and side wall, shall be finished of the same material and of the same texture and design as the existing building on Ocean avenue, namely, limestone and face brick, with limestone trimming and limestone balustrade; that the Kenmore avenue frontage shall set back not less than 25 feet from the established municipal building line; that a side court to the north, not less than 10 ft. wide, running from street to street, shall be maintained open; that a side court of not less than 14 feet shall be maintained at the south, for a depth of not less than 100 ft.; that there shall be no exit or entrance on the Kenmore avenue front, nor on the side courts, other than one emergency exit, opening to the south side court and not less than 25 feet from the Kenmore avenue frontage; that the use and occupancy of this proposed structure shall be restricted and limited to the conduct of a central telephone exchange, and that there shall be no storage of any material on the unoccupied land forming part of this premises; that the unoccupied space on the Kenmore avenue front shall be seeded and maintained as a grass lawn, other than one cement pedestrian pathway, not exceeding five (5) feet in width, from the southerly

court to the Kenmore avenue sidewalk; that no signs or advertising of any nature or description shall be exposed or displayed on the exterior of the building; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

THE RESOLUTION:

(754-25-BZ)

WHEREAS, Robert Tappan, for Cord Meyer Development Company, owner, filed, July 20, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a group of 26 one-car attached garages, for the storage of pleasure motor vehicles, as an accessory to private dwellings located within the same block; PREMISES north side of Austin street, bounded by Puritan avenue and Atom place, Forest Hills, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 10, 1925, after due notice by publication in the Bulletin of the board of standards and appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Austin street, Atom place and Puritan avenue are in residence districts, and that Queens boulevard is in a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered June 30, 1925, reads:

"Erection of these buildings is contrary to the zone law, Art. 2, Sec. 3.

"Building proposed is for use not allowed except when same is accessory to dwelling on same lot.

"The number of cars to be provided is greater than allowed for an accessory use."

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 10 feet and a depth of 20 feet, to be occupied as group of 26 one-car attached garages, for the storage of pleasure cars, as an accessory to private dwellings located within the same block; and

WHEREAS, applicant filed 94.5 per cent. of consents in support of his basis of appeal under rules of exception, section 7-g of the building zone resolution, and the board deemed it would be an unnecessary hardship, within the meaning of section 21, to deprive applicant of the privilege of developing his property as proposed for the accommodation of the fee owners and as accessory use thereto, under conditions which would safeguard and protect adjacent or affected properties.

MINUTES

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the garage use shall be limited to twenty-six (26) individual garages united, not exceeding a width of 8 ft. 4 inches each, interior dimensions, and a depth of 20 ft., subdivided by walls of approved masonry, the use and occupancy to be maintained as accessory to private residences in fee ownership, located within the block bounded by Austin street, Atom place, Puritan avenue and Queens boulevard; that there shall be no signs of any nature or description exposed or maintained on the premises; that there shall be no gasoline storage equipment installed on any part of

the square block within the residence area; the garage use be restricted to storage of automobiles of the pleasure car type, the property of owners or occupants of the residences within the block above described and accessory thereto; that the exterior of the buildings shall be finished in face brick in general harmony with the exterior of the private residences on the street frontages within the square block aforesaid; that all permits necessary for the prosecution of the work shall be obtained within nine months and the buildings completed within eighteen months from the date of this action.

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(677-25-S)

WHEREAS, Crocker National Fire Prevention Engineering Co., for Memental Realty Co., owner, filed, June 30, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in order of the fire commissioner, affecting premises 221-249 McKibben street, Brooklyn; and

WHEREAS, the order of the fire commissioner, No. 64925-LD, dated September 24, 1925, reads:

"1. Remove the sub-standard fire escapes on the front and rear or reconstruct same in accordance with section 274 of labor law, except that in lieu of a counterbalanced stairs a drop ladder in guides from the lowest balcony to the ground may be provided.

"2. Enclose the interior stairway at east end of building serving as a required means of exit. * * *.

"3. Enclose the interior stairway at center of building serving as a required means of exit, * * *."

and

WHEREAS, the building is non-fireproof, three stories in height, 200 ft. by 40 ft. in area, with one-story extension, 71 ft. by 55 ft. 6 in. in area; OCCUPIED as a factory building; 1st story, stock and shipping, 16 persons; 2nd story, cutting rooms, 33 persons; 3rd story, assembling, 23 persons; EQUIPPED with a fire alarm signal system. EXITS: An interior iron stairway at center, extending from the 1st story to top story, with fireproof sliding doors at 2nd story openings; an open wooden stairway at east end, extending from 1st to 2nd story; six sub-standard fire escapes; three on the front and three on the rear of the building, having non-fireproof openings along the course thereof, extending from the 2nd to the 3rd story, no egress from termination of rear fire escapes; there are no adjoining buildings; and

WHEREAS, the petitioner proposes to provide fireproof self-closing doors to center stairway at 1st and 3rd stories; to rearrange the front east fire escape so as to meet with all requirements of a standard fire escape; to remove all other sub-standard fire escapes; he contends the building will then be provided with two means of egress, and requests the board to accept the proposed work in lieu of complying with Items 1, 2 and 3 of fire department Order No. 64925-LD.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 2, on condition that the existing staircase shall be enclosed with fire-retarding material in accordance with the rules of the board of standards and appeals, with self-closing fireproof doors at the foot of stairs on each story; granted, as to Item No. 3, on condition that the entrance on each side of the stairs shall be provided with vestibuled enclosures, fire-retarded, with self-closing fireproof doors at all openings, and that a 60-degree fire escape shall be provided on the east end of the building, with counterbalanced stairway to the street, with fireproof casement doors to each balcony, with steps to sills, and that the occupancy and use shall remain unchanged; and denied as to Item No. 1.

Negative	0
Absent	0

THE RESOLUTION:

(679-25-S)

WHEREAS, Croker National Fire Prevention Engineering Company, for 5 West 30th Street Corporation, owner, filed, June 30, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 5 West 30th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated January 21, 1925, reads (Order No. 70958-LD):

"1. Provide an additional means of exit from the 1st story, said exit to be located at the north side of building, in accordance with the provisions of Section 271 of the Labor Law.

"2. Provide safe and unobstructed egress from the lower termination of the fire escape at the north side of the building by constructing a fireproof passageway with an unobstructed width of at least 3 feet throughout, leading to the street, adequately lighted at all times during working hours, or by means of providing access to an open area having communication with the street, as per Section 373 c the Labor Law."

and

WHEREAS, the building is non-fireproof, five stories in height, 25 ft. by 98 ft. 9 in. in area at 1st story and 25 ft. by 89 ft. 2 in. in area above; OCCUPIED as a factory building; 1st story, store; 2nd story, sample room, 3 persons; 3rd story, vacant; 4th story, showroom, 2 persons; 5th story, manufacturing dresses, 14 persons; EQUIPPED with a fire alarm signal system. EXITS: An interior wooden stairway, extending from the 1st story to roof; enclosed in fire-retarding partitions with fireproof doors at openings; a fire escape on the rear of the building, having fireproof openings along the course thereof, extending from top story to the 2nd story; with EGRESS from the termination of the fire escape by means of a passageway leading to entrance hall, thence to the street; ROOFS of adjoining buildings 7 stories higher at west, 6 stories higher at east; and

WHEREAS, the petitioner proposes, with regard to Item 1, to cut a doorway in the partition separating the front part of 1st story from the rear partition; he claims, with regard to Item 2, that the passageway is enclosed by brick wall on one side and fire-retarding partition on the other side; due to the light occupancy and the fact that no manufacturing is done in the building, except on the 5th story, he requests the board to accept the proposed exits.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 1, on condition that a doorway shall be provided in the partition separating the front and rear portions of the 1st story and equipped with self-closing fireproof door; granted, as to Item No. 2, on condition that a standard fire escape shall be provided on the rear of the building to the 2nd story level with stairway therefrom to main hall,

1st story, with egress direct to street, stairway and passageway to be enclosed with fire-retarded partitions, all openings therein equipped with fireproof self-closing doors, and on condition that the manufacturing occupancy shall be restricted to the top story.

WHEREAS, Samuel Rosenblum, for Emil T. Palmenberg, owner, filed, July 1, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in orders of the fire commissioner, affecting premises 89-91 West 3rd street, Manhattan; and

WHEREAS, the orders of the fire commissioner read:

"Order No. 79655-LD. 1. Arrange the doors leading to stairway on all stories, so as to open outwardly without obstructing the stairway, as per sec. 271 of labor law."

"Order No. 79654-LD. 1. Provide safe and unobstructed egress from the lower termination of the fire escape at the rear of the building by constructing a fireproof passageway with an unobstructed width of at least 3 ft. throughout, leading to the street, adequately lighted at all times during working hours, or by means of providing access to an open area having communication with the street, as per sec. 273 of the labor law."

and

WHEREAS, the building is non-fireproof, five stories in height, 50 ft. by 95 ft. in area; OCCUPIED as a factory building; on the 1st story, shipping; 2nd story, carpenter, 14 persons; 3rd story, shaping wire, 13 persons; 4th story, machine shop, 32 persons; 5th story, plating, 41 persons; EQUIPPED with a sprinkler system. EXITS: An interior fireproof stairway, extending from the 1st story to roof, separated from each floor by brick walls, with fireproof sliding doors at openings; a fire escape on the rear of the building, having fireproof openings along the course thereof, extending from roof to yard level, with EGRESS from the termination of the fire escape by means of gate in fence to adjoining yard at north, which yard opens directly to the street; ROOFS of adjoining buildings, one story lower at the east, two stories lower at the west; and

WHEREAS, the petitioner claims the fireproof sliding door at openings to stairhall are similar to those used at horizontal exits; that the egress from rear fire escapes is maintained; that consents to use the adjoining properties at north from exit have been obtained from the lessees; and in view of the above facts, the petitioner requests the board to accept the present exits without change.

Resolved, that the orders of the fire commissioner be and they hereby are affirmed, and the petition be and it hereby is denied.

THE RESOLUTION:

(690-25-S)

WHEREAS, Samuel Rosenblum, for the Sutter Ave. Realty Co., Inc., filed, July 1, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in order of the fire commissioner, affecting premises 1252-4 Bedford avenue, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated April 1, 1925, reads:

"1. Extend the interior stairway at east side of building from 3rd story to the roof.

"2. Enclose the interior stairway at the east side of the building in partitions of fire resisting material extending from the 1st story to and including the bulkhead on the roof.

"3. Arrange the fire escape on the west side of building and the openings leading thereto and the windows opening on the course thereof, so that same are in compliance with the provisions of Sec. 273 and 274, etc., or carry out the proper alternative method of complying with the requirements of Labor Law. Among defects noted on this fire escape are the following:

"Counter-balanced stairs from lowest balcony to ground.

"No fireproof passageway from termination to street.";

and

WHEREAS, the building is non-fireproof, four stories in height, 45 ft. 7½ in. by 90 ft. in area; OCCUPIED as a tenant factory; 1st story, stores; 2nd story, dancing school and hall; 3rd story, manufacturing cloaks, 20 persons; 4th story, manufacturing dresses, 35 persons. EXITS: An interior wooden stairway at east side, extending from 1st story to 3rd story, thence at south side from 3rd story to 4th story, enclosed in wooden partitions with wooden doors at openings; a horizontal exit on each of the 2nd and 3rd stories to building at south; a sub-standard fire escape on the front of the building; a 60-degree fire escape on the west (rear) side of the building, having fireproof openings on the course thereof, extending from the top story to the 1st story, with no means of egress from the termination of same; ROOFS of adjoining buildings, 10 ft. lower at north, 11 ft. lower at south; and

WHEREAS, the petitioner proposes to enclose the stairway at east with fire-resisting partitions up to the ceiling of 3rd story; to remove the 60 degree fire escape at west (rear) and reconstruct them on north side at rear, extending from the top story to roof of adjoining 1st story extension, the openings along the course thereof to be fireproof, self-closing; he claims the adjoining buildings on both sides are under the same ownership; that the exit and entrance to the 4th story of the building under this petition are through the adjoining building at south; he further contends that the exits would be adequate, and requests the board to accept the proposed exits in lieu of complying with Items 1, 2 and 3 of fire department Order No. 74975-LD.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, as to Item No. 3, *on condition* that a standard fire escape shall be provided from the rear at the northerly gable wall terminating on the roof of the extension of the building to the north in the same ownership, with egress through plain glass windows; and that a counterbalanced drop ladder in guides shall be provided from the rear of the fire escape at the south side from lowest balcony to the yard, with egress in the rear to Fulton street; and *granted* only so long as both buildings (one to north) remain in a single ownership, and the conditions as to occupancy and use remain substantially unchanged; and *denied* as to Items No. 1 and 2.

THE RESOLUTION:

(704-25-S)

WHEREAS, Croker National Fire Prevention Engineering Co., for S. Weil & Co., Inc., owner, filed, July 3, 1925, a petition, with the board of standards and appeals, for a variation from the requirements of the labor law, as cited in order of the fire commissioner, affecting premises 379-385 De Kalb avenue, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated October 3, 1925, reads:

"1. Arrange bars on windows on east, west and south sides of basement so as to be readily movable or removable from both sides in such a manner as to afford the free and unobstructed use of such windows for purpose of egress as per Sec. 272 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, four stories and basement in height, 60 ft. by 157 ft. 6 in. in area. OCCUPIED: Basement, shoe factory, 30 persons; 1st, 2nd and 3rd stories, shoe factory, 280 persons; 4th story, wool knit goods, 70 persons; EQUIPPED with a sprinkler system and a fire alarm signal system; and

WHEREAS, there are barred windows in the east, west and south walls of basement story; and

WHEREAS, the petitioner contends that the basement is amply provided with exits; two stairways and fire openings leading to the open areaway running around the entire premises, exit from areaway being by means of iron ladders, located at each opening to street; petitioner contends further that the fire alarm signal would afford ample opportunity for the occupants of this story to escape in the event of fire in any other portion of the premises.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted on condition* that casement doors shall be provided on every third opening, with egress to open areaway, and vertical ladders from said area at each opening to sidewalk; and that a legal enclosed stairway shall be provided and maintained on the interior of the building.

THE RESOLUTION:

(391-25-S)

WHEREAS, A. E. Nast, for Mary C. Morrison, owner, filed, April 11, 1925, a petition, with the board of standards and appeals, from a decision of the superintendent of buildings and from an order of the fire commissioner, affecting premises 17 East 55th street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, dated March 28, 1925, reads:

"Relative to your application of March 27th, for a Certificate of Occupancy of the above premises, you are advised before the aforesaid certificate can be issued a second means of egress must be provided in accordance with the Labor Law.";

and

WHEREAS, the order of the fire commissioner, dated May 20, 1925, reads:

"1. Arrange iron bars on windows on north, east and west sides of building so as to be readily movable or removable from both sides in such a manner as to afford the free and unobstructed use of such windows for purposes of egress, as per Section 272 of the Labor Law.";

and

MINUTES

WHEREAS, the building is non-fireproof, five stories in height, 17 ft. by 95 ft. in area. OCCUPIED: 1st story, dressmaking, 25 persons (15 engaged in manufacturing; 2nd story, showroom (dresses) and offices, 15 persons; upper stories, dwellings. EXITS: An interior wooden stairway, extending from the 1st story to top story, enclosed in fire-resisting partitions with fire doors at openings; a fire escape on the westerly rear of the building, having unprotected openings along the course thereof, extending from the top story to the 1st story balcony, with drop ladder to yard; with EGRESS from the termination of the fire escape by means of door in fence to the premises at rear; ROOFS of adjoining buildings, to east 6 ft. higher, to west 4 ft. higher; and

WHEREAS, there are three barred windows at the rear of the premises on the 1st story; and

WHEREAS, the petitioner contends that a certificate of occupancy was issued by the bureau of buildings for 35 persons on the 1st story, 5 of whom to be engaged at manufacturing, and proposes to reduce the occupancy of the 1st story to 25 persons, 15 to be engaged in dressmaking, and contends further that the existing means of egress are adequate for the occupancy; re barred windows, petitioner contends that the bars are necessary as a protection against burglary and that there are other means of exit from the rear of the premises.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, re the decision of superintendent of buildings, as to second means of egress, on condition that the factory shall be restricted to 1st story; that egress shall be provided from the rear to the yard of the adjoining premises to the north, with egress therefrom through plain glass door to 56th street, and also that egress shall be provided from 1st story by door at the rear to the yard, with egress from yard to yard at west; and as to Item 1 of fire commissioner's order, the petition as to barred windows, be and it hereby is denied.

THE RESOLUTION:

(443-25-S)

WHEREAS, William F. Doyle, for Revillon Freres, lessee, filed, April 24, 1925, a petition, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 668 Fifth avenue, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated November 26, 1924, reads:

"Provide an outside iron balcony fire escape on the rear of the building with balconies 4 ft. in width, connected by stairways not less than 22 in. wide, placed at an incline of not more than 45 degrees, extending from ground to roof, constructed as per Section 273 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with Section 271 of the Labor Law."

and

WHEREAS, the building is fireproof, six stories in height, 25 ft. by 100 ft. in area at 1st story and 25 ft. by 90 ft. in area above. OCCUPIED: 1st story, store; 2nd story, salesroom, 5 persons; 3rd, 4th and 5th stories, showrooms, 5 persons on each floor; 6th story, manufacturing furs, 15 persons. EXITS: An interior fireproof stairway, extending from the 1st story to roof, enclosed in fireproof partitions with fire doors at openings; ROOFS of adjoining buildings, at north 6 in. higher, at south 20 ft. lower, at west 50 ft. lower; and

WHEREAS, the petitioner claims the board of standards and appeals in granting a petition February 27, 1923, under Cal. No. 101-23-S for a similar order on No. 670 Fifth avenue, imposed the condition of providing horizontal exits at 2nd and 6th stories, connecting with this building under this petition; that this condition has been complied with; that as an entrance or exit the occupants always use the building No. 670 Fifth avenue; under such conditions he requests the board to waive fire department Order No. 68744-LD, calling for fire escapes.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so long as both floor areas on either side of division wall are used, occupied and maintained by the same and single tenant, on condition that a horizontal exit shall be maintained in the division wall on the top story in addition to two enclosed stairways, and granted only so long as factory use and occupancy are confined to 6th story.

THE RESOLUTION:

(514-25-S)

WHEREAS, Rudolf C. P. Boehler, for Frederic D. Fricke, owner, filed, May 18, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a letter from the fire commissioner, affecting premises 63 Madison avenue, Manhattan; and

WHEREAS, the letter of the fire commissioner, dated May 18, 1925, reads:

"In reply to your inquiry at this office, you are advised that the fire escape in the above premises cannot be accepted due to the fact that it is located too close to the stairway.";

and

WHEREAS, the building is non-fireproof, five stories in height, 24 ft. 9 in. by 71 ft. 1 in. in area; OCCUPIED as a tenant factory, 48 persons above the 2nd story. EXITS: An interior fireproof stairway, extending from the 1st story to roof, enclosed in fireproof partitions with fire doors at openings; a fire escape on the 27th street front of the building, having fireproof openings along the course thereof, extending from the top story to the 2nd story balcony; with EGRESS from the termination of the fire escape by means of a counterbalanced stairs to the street; ROOFS of adjoining buildings are three stories higher; and

WHEREAS, petitioner contends that no hazardous occupancy exists in the premises and that the plans for the stairway, as a secondary means of egress, were approved by and the work accepted by the bureau of buildings, and a final certificate for occupancy as a factory was issued.

Resolved, that the board of standards and appeals does

hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, on condition that a standard labor law fire escape shall be provided on the 27th street side, embracing all windows on the 27th street side other than the first row from the Madison avenue front; and that all other windows on the course of fire escapes shall be made fireproof and self-closing, and that the labor law requirements shall be complied with in all other respects.

THE RESOLUTION:

(516-25-S)

WHEREAS, David M. Jones, for The O. B. Potter Properties, Inc., owner, filed, May 18, 1925, a petition, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 740-744 Broadway, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, affecting the 6th, 7th, 8th, 9th, 11th and 12th floors, dated March 18, 1925, reads:

"Arrange iron bars on windows on course of fire escape at east side of building, so as to be readily movable or removable from both sides in such a manner as to afford the free and unobstructed use of such windows for purposes of egress, as per Section 272 of the Labor Law.";

and

WHEREAS, the building is fireproof, 12 stories in height, 92 ft. 13/8 in. by 113 ft. 7 in., irregular in area; OCCUPIED as a factory building, about 58 persons on an average to each story; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Two interior fireproof stairways, extending from the 1st story to roof, enclosed in fireproof partitions, with fire doors at openings; an exterior fireproof stairway on the rear of the building, having fireproof openings along the course thereof, extending from main roof to the 2nd story; with EGRESS from the termination of the fire escape by means of fireproof hallway to the street; ROOFS of adjoining buildings, eight stories lower at south, four stories lower at east; and

WHEREAS, the petitioner claims there is one window opening at east on each of the 6th, 7th, 8th, 9th, 11th and 12th stories, which has been barred by each lessee for protection against burglary; each lessee has received a fire department order to remove the bars and in turn called upon the owner for relief; he further contends that the windows in question are not called for by law; they could be built up solid with brick without violating any law; that the violations are technical, and requests the board to take a sensible view of the matter and waive the requirements of the fire commissioner in this case.

Resolved, that the order of the fire commissioner be and it hereby is affirmed, and the petition be and it hereby is denied.

THE RESOLUTION:

(433-25-S)

WHEREAS, United States Printing and Lithograph Company, owner, filed, April 21, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 83-101 North 3rd street and 209-219 Wythe avenue, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated April 1, 1925, reads:

"1. Extend the interior stairway to roof and enclose said stairway with partitions of fire resisting material * * *.

"2. Remove the sub-standard fire escapes on the north and south sides of building No. 2 or reconstruct same as per Section 274 of the Labor Law * * *.

"3. Enclose the interior stairway at the east side of building No. 3 in partitions of fire resisting material * * *.

"4. Remove the party wall balcony between buildings No. 2 and No. 3 or maintain same structurally safe, properly painted and unobstructed * * *."

and

WHEREAS, the premises consist of three buildings of non-fireproof construction; building No. 1 being six stories in height and buildings No. 2 and No. 3, five stories in height, with a total area of 126 ft. by 236 ft.; OCCUPIED as a printing and lithographing establishment with a total of 143 persons in buildings No. 2 and No. 3 and 140 persons in building No. 1; the means of EGRESS consisting of an interior enclosed fireproof stairway in building No. 1 extending from 1st story to the roof, a non-fireproof stairway at the rear also extending from 1st story to the roof; a fire escape on the rear of the building and one on the Wythe avenue front; horizontal exits on each story leading to building No. 2; the means of EGRESS in building No. 2 consisting of an interior stairway extending from 1st story to top story with scuttle and ladder to roof, an exterior iron stairway at rear centre and a party wall fire escape at rear and front connecting with building No. 3, horizontal exits in each story connecting with buildings No. 1 and No. 3; the means of EGRESS in building No. 3 consisting of an interior stairway extending from 1st story to roof, a party wall fire escape on the rear and front connecting with building No. 2; horizontal exits in each story connecting with building No. 2; the building being equipped with a two-source sprinkler system and a fire alarm signal system; and

WHEREAS, petitioner contends that the means of egress are adequate and that building No. 1 was acted upon by the board of standards and appeals, Cal. No. 1406-21-S, and that there has been an action of the board of review of the fire department on these premises.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is denied, as to Items 1, 3 and 4; granted, as to Item 2, on condition that this fire escape shall be maintained structurally safe; that the present frames and sash of windows on fire escape be covered with metal, permitting the existing 65 degrees connecting stairs to remain; and that a counterbalanced drop ladder in guides shall be provided from lowest balcony to

ground; and that the above conditions are granted only so long as use and occupancy of building remains substantially unchanged

THE RESOLUTION:

(512-25-S)

WHEREAS, Brooklyn Commercial Body Co., lessee, filed, May 15, 1925, a petition, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 470-474 Clermont avenue and 463 Adelphi street, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated May 11, 1925, reads:

"2. Arrange the entrance doors at street so as to open outwardly, as per Section 271 of the Labor Law.";

and
WHEREAS, the building is non-fireproof, three stories in height, having a frontage of 75 ft. on Clermont avenue and a frontage of 25 ft. on Adelphi street. EXITS: Three interior wooden stairways, two extending from the 1st to top story, and the fire tower extending from the 1st story to the roof; two enclosed in fire-resisting partitions and the fire tower enclosed in fireproof partitions, with fireproof doors at all openings; a fire escape on each street front, extending from the top story balcony to the street; and

WHEREAS, there are two 12 ft. doors on the Clermont avenue front and two 10 ft. doors on the Adelphi street front, used for the purpose of taking in and out automobile bodies, these doors opening inwardly; and

WHEREAS, petitioner contends that the doors in question are not used as exits, other means having been provided, and that to arrange these doors to swing outwardly would jeopardize pedestrians, and contends further that, owing to the size of the doors, it would be a hardship to comply with the orders.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that two doors additional to existing vehicular door on street front shall be provided, opening out.

494-25-S.

PETITIONER—Schwartz & Gross, for Broadway & 38th Street, Inc., owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—134-142 West 38th street and 1385-1391 Broadway, Manhattan.

APPEARANCES—None.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE RESOLUTION:

(494-25-S)

WHEREAS, Schwartz & Gross, for Broadway and 38th Street, Inc., owner (Abraham Bricken, president), filed, May 11, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in decision of superintendent of buildings, affecting premises 134-142 West 38th street and 1385-1391 Broadway, Manhattan; and

WHEREAS, the decision of the superintendent of buildings reads:

"19. All exterior openings, including those at 1st, 2nd and 3rd stories at front, should comply with section 264 of labor law and rule 503 of industrial code.

"20. Partitions in entrance hallways should comply with section 263 of labor law. Wire glass not permitted."

and

WHEREAS, the building is fireproof, 23 stories in height, 104 ft. by 174 ft. 6 in. and 207 ft. 2 in., irregular in area. OCCUPIED, 25 per cent manufacturing, 150 persons on each story; EQUIPPED with a sprinkler system, fire alarm signal system and lawful exits; and

WHEREAS, the petitioner proposes to arrange front windows on the 1st, 2nd and 3rd stories so as to be part stationary and part pivoted; the maximum size of $\frac{1}{4}$ in. plate glass on 2nd and 3rd stories will be 8 ft. by 8 ft. and on the 1st story will be 6 ft. by 12 ft.; he also proposes to install stores on the 1st story with show windows opening on to the entrance hall; he requests the board to permit the construction as proposed, provided the stores will be located within the entrance hall enclosure; that the store fronts will be constructed of metal and plate wire glass in lights not exceeding 720 sq. in., including doors leading to same.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Objection 19, only so far as it affects the windows of 1st, 2nd and 3rd stories at street front, on condition that the openings shall be equipped with metal frames, glazed with polished plate glass not less than $\frac{1}{4}$ in. in thickness; and that the labor law requirements shall be complied with in all other respects; as to Item 20, the petition be and it hereby is denied.

274-25-S.

PETITIONER—Henry I. Oser, for Roth Picket Realty Co., lessee.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—36 West 36th street, Manhattan.

APPEARANCES—

For Petitioner: Henry C. Oser.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle..... 4

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(274-25-S)

WHEREAS, Henry I. Oser, for Roth Picket Realty Co., lessee, filed, March 10, 1925, a petition, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 36 West 36th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated March 10, 1925, reads:

"1. Provide a safe and unobstructed passageway from the termination of the fire escape at the rear of building leading to the street, as per Section 273 of the Labor Law."

and

WHEREAS, the building is non-fireproof, seven stories in height, 20 ft. by 94 ft. 9 in. in area at 1st story and 20 ft. by 86 ft. 9 in. in area above. OCCUPIED: 25 per cent manufacturing, 15 persons on each story. EXITS: An interior, non-fireproof stairway, extending from the 1st story to roof, enclosed in fire-retarding partitions with fire doors at openings; horizontal exits on 2nd, 3rd and 4th stories to building No. 38; a party-wall fire escape on rear of building, having fireproof openings along the course thereof, extending from main roof to the yard level, with no means of egress from the termination of the fire escape to the street; ROOFS of adjoining buildings, at east 20 ft. lower, at west 30 ft. lower; and

WHEREAS, the same subject matter was denied by the board of standards and appeals, July 17, 1923, under Cal. No. 641-23-S, and under certain propositions then made; and

WHEREAS, the petitioner now proposes to entirely remove the rear fire escape, except party-wall balcony at the 5th story, connecting with building at east (No. 34); to provide a 45 degree fire escape on east sidewalk at 6th and 7th stories and terminating on roof of building at east (No. 34), thence by means of approved stairs to street.

Resolved, that the order of the fire commissioner be and it hereby is affirmed, and the petition be and it hereby is denied.

561-25-S.

PETITIONER—Samuel Rosenblum, for Farmers Loan & Trust Co., trustee.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—6 West 29th street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(561-25-S)

WHEREAS, Samuel Rosenblum, for Farmers Loan and Trust Company, trustee, filed, June 1, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in order of the fire commissioner, affecting premises 6 West 29th street, Manhattan; and

WHEREAS, the order of the fire commissioner reads:

"1. Arrange the fire escape on rear of the building and openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of sec. 273 and 274 of the labor law and the rules of the Board of Standards and Appeals or carry out a proper alternative method of complying with the requirements of section 271 of labor law.

"Among the defects noted are the following:

"(A) Windows on course not fireproof, self-closing.

"(C) No fireproof passageway from termination to street.

"2. Extend the interior stairway at the west side of building to the roof, as per section 271 of labor law."

and

WHEREAS, the building is non-fireproof, five stories in height, 25 ft. by 98 ft. 9 in. in area at the 1st and 2nd stories and 25 ft. by 50 ft. in area above. OCCUPIED: 1st story, stores, 3 persons; 2nd story, furrier, 10 persons; 3rd story, furrier, 3 persons; 4th story, manufacture of dresses, 7 persons; 5th story, manufacture of fur coats, 6

MINUTES

persons; EQUIPPED with a fire alarm signal system. EXITS: An interior wooden stairway, extending from the 1st story to the top story, with iron stair to roof, enclosed in wood lath and plaster partitions with wooden doors at openings; a fire escape on the rear of the building, having fireproof openings along the course thereof, excepting on the top story, extending from the top story to the roof of the 2nd story extension, with gooseneck ladder to main roof; with EGRESS from the termination of the fire escape by means of extension roofs of adjoining buildings; ROOFS of adjoining buildings to east same height, to west 8 ft. lower; and

WHEREAS, petitioner contends that the occupancy is light and that similar orders were issued in 1917, and that a modification was granted and certain work was to be done; that this work has been done and, in view of the facts, requests that the existing means of exit be accepted.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, ratifying the action of the board of review of the fire department of October 23, 1919, *on condition* that stipulations of said action shall be complied with in all respects; and that a double-rung fixed iron ladder shall be provided in top story hall to scuttle in roof; and *granted* so long as conditions as to occupancy and use remain substantially unchanged.

1477-24-S.

PETITIONER—Samuel Rosenblum, for 132 West 36th Street Corp., owner.

SUBJECT—Application for modification of resolution—re: order of fire commissioner.

PREMISES AFFECTED—132-8 West 36th street and 139-45 West 35th street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition reopened; granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND GRANT ON CONDITION—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle..... 4

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(1477-24-S)

WHEREAS, Samuel Rosenblum, for 132 West 36th Street Corp., owner, filed, December 16, 1924, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 132-138 West 36th street and 139-45 West 35th street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 59254-LD, dated May 8, 1924, reads:

"1. Replace all wood partitions on all stories with partitions of incombustible material as per Sections 263 and 270 of the labor law.";

and

WHEREAS, the building is fireproof, 12 stories in height, facing on two streets, 75 ft. by 187 ft. (irregular) in area; OCCUPIED as furniture show room, offices and 25 per cent of the 5th, 7th, 10th, 11th and 12th stories (only) for the manufacture of clothing, 298 persons above the 1st story; EQUIPPED with a sprinkler system. EXITS: An interior fireproof stairway extending from 1st story to roof, enclosed in fireproof partitions with fireproof doors at openings; ROOFS of adjoining buildings to east and west six stories lower; and

WHEREAS, petitioner contends that all of the permanent partitions on the premises are fireproof and that the partitions in question do not obstruct any means of egress and are, in most cases, dwarf partitions enclosing offices and show rooms; and

WHEREAS, this petition was denied by the board at its

meeting February 24, 1925, and petitioner requested a reopening of the case, proposing to provide additional means of egress.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted on condition* that an exterior screened stairway shall be erected on westerly wall at junction of two sections, extending from rear of public hall on 1st story to roof, screened to a height of 5 ft., standard in all other respects; all doors and openings to be made fireproof and self-closing; the interior wooden partitions other than those enclosing showrooms and offices to be removed; the uppermost 18 in. of partitions shall be of plain glass; and *granted* so long as conditions as to occupancy and use remain substantially unchanged.

ACTION OF BOARD—Appliance approved.

THE VOTE TO APPROVE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle 4

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(242-25-SA)

WHEREAS, the American Fire Prevention Bureau, Inc., filed, February 27, 1925, a petition, with the board of standards and appeals, for approval of their device, known as the Derby Automatic Sprinkler and Standpipe Supervisory Alarm Panel; and

WHEREAS, this matter was referred to the fire department for test and report, and a report of the chief of the bureau of fire prevention dated August 14, 1925, recommends the approval of the device.

Resolved, that the board of standards and appeals does hereby *approve* the device, known as the Derby Automatic Sprinkler and Standpipe Supervisory Alarm Panel, when installed and operated in accordance with the stipulations set forth in the report of the chief of the bureau of fire prevention, dated August 14, 1925.

CASES DISMISSED.

Variations of the Labor Law.

The chairman called attention to the following cases, where notices of intention to petition were offered for filing; but where, despite notices from this office, papers have not been completed, thus tying the hands of the administrative official in the performance of his duty:

(3-25-S)

Filed January 2.—Premises 635-641 West 49th street, Manhattan. Order of the fire commissioner, labor law. Petitioner, Brambach Piano Company. Dismissed for lack of prosecution.

MINUTES

(17-25-S)

Filed January 6.—Premises 480 Bergen street, Brooklyn.

Absent: Fire Chief Kenlon	1

THE RESOLUTION:

WHEREAS, the foregoing petitioners have failed to complete their papers, though duly notified to do so.
Resolved, that the foregoing petitions be and they hereby are *dismissed* for lack of prosecution.

Adjourned 6.35 p. m.

JAMES O'CONNOR, *Secretary*.

MINUTES

BOARD OF STANDARDS AND APPEALS

*CORRECTION.

The minutes of the meeting of the board of standards and appeals, held Wednesday, November 4, 1925, as they appeared in Bulletin No. 43, Vol. X, are hereby corrected to read as follows:

505-25-BZ.

APPLICANT—John J. Kadel, for Walton Whyte Realty Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—East side of Jerome avenue, 350 ft. south of East 181st street, The Bronx.

APPEARANCES—

For Applicant: John J. Kadel.

For Opposition: Henry C. White, William B. De Lacey, Arnold Gross and others.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle	4
Negative: Fire Chief Kenlon	1
Absent	0

THE RESOLUTION:

(505-25-BZ)

WHEREAS, John J. Kadel, for Walton Whyte Realty Corporation, owner, filed, May 13, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises east side of Jerome avenue, 350 ft. south of East 181st street, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 4, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the build-

**Correction—Words "Fire Chief Kenlon" changed to "Guilfoyle" in lines 20 and 21 of minutes and "Commissioner Guilfoyle" changed to "Fire Chief Kenlon" in line 22 of minutes.*

ing zone resolution show that Jerome avenue is in a business district; East 181st street is in a business district, and that Walton avenue is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 9, 1925, reads:

"1. Erection of proposed garage for storage of more than five motor vehicles in business district is contrary to provisions of Building Zone Resolution."

and

WHEREAS, the proposed building is of non-fireproof construction, two stories in height, with a frontage of 150 ft. and a depth of 100.94 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the applicant, having complied with specific rules and regulations as laid down by the zoning regulations under section 7 G and in support of this application on the theory of hardship, section 21 (being the fee owner of the property), irrespective of the subsequent withdrawal of consents after the presentation of the appeal.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building shall not exceed a two (2) story structure in height above grade; that the rear and gable walls, unless opening within the property of the same lot or plot and in the same ownership, shall be unpierced throughout their entire height and length; that any runway ramp installed or maintained in this building shall be set back at a street grade level not less than 10 ft. from the front wall of the building; that the front elevation shall be finished with face brick, architectural terra cotta or stone trimmings, panel design, other than store front show windows if installed; that there shall be no roof signs erected; no signs or advertising display shall be exposed on the front of the structure, other than one projecting electric sign, indicating the title and conduct of business conducted on the premises; any other advertising to be confined to fixed letters on plate glass show windows; all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building shall be completed within eighteen (18) months from the date of this action, and that the building zone regulations and requirements shall be complied with in all other respects.

MINUTES

BOARD OF STANDARDS AND APPEALS

*CORRECTION.

The minutes of the meeting of the board of standards and appeals, held Wednesday, November 4, 1925, as they appeared in Bulletin No. 43, Vol. X, are hereby corrected to read as follows:

AREA FIXED.

(755-25-BZ)

The chairman presented and read a communication

**Correction—Cal. number added to resolution.*

from Max Cohn, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises 870-872 Metropolitan avenue, Brooklyn.

The following area was approved by the board:

Both sides of Metropolitan avenue from Olive street to Bushwick avenue and also the premises to the rear and for a distance of 50 feet on each side of the side lot lines of the premises in question.

RULES

FIRE RETARDING RULES

Adopted by the Board of Standards and Appeals August 30, 1917; Amended November 1, 1917.

Rule 1. Fire Retarding Materials for Garages, Motor Vehicle Repair Shops and Oil Selling Stations. In garages, motor vehicle repair shops and oil selling stations any material or form of construction shall be deemed fire-retarding within the meaning of §73, subdivision 3, of the building code, that resists the action of flame and heat when subjected to a continuous fire for one hour at an average temperature of seventeen hundred (1700) degrees Fahrenheit without the passage of flame, and with a maximum temperature rise to four hundred (400) degrees Fahrenheit on the side away from the fire. The point at which the temperature of transmitted heat is measured shall be protected from external air and weather conditions.

When the test specimen is in the form of partition construction, the area under test shall be not less than one hundred (100) square feet and least dimension shall be not less than nine (9) feet. When in the form of floor construction, the area under test shall be not less than two hundred (200) square feet and the least dimension shall be not less than fourteen (14) feet.

During the fire, the floor construction shall support the live load for which it is designed, and after the fire shall safely sustain twice the designed live load with a maximum deflection of not more than one two-hundredth ($1/200$) part of the span.

Rule 2. Wood Joisted Floor Construction. Wood joisted floor construction shall be accepted as fire-retarding construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations when the beams are protected on the upper and under sides with the fire-retarding materials specified in rules for floor and ceiling coverings.

Rule 3. Floor Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the upper sides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) Seven-eighths ($7/8$) inch wood underflooring protected with a membrane of two-ply waterproofing covered with not less than two and one-half ($2\frac{1}{2}$) inches of 1:2½:5 concrete or better, reinforced with not less than one-fourth ($1/4$) of one (1) per cent of steel mesh.

(b) Two and one-half ($2\frac{1}{2}$) inches of 1:2:4 concrete applied directly to the top of the joists, with or without temporary support, reinforced with not less than one-fourth of one per cent steel rods, mesh or steel lath, and having the tops of the joists coated with approved waterproof paint or protected by tar paper on the top and on the sides for a distance of three inches from the top. (Amendment, Nov. 1, 1917.)

Rule 4. Ceiling Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the undersides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) One-half ($1/2$) inch plaster boards, or three-eighths ($3/8$) inch gypsum wall boards weighing not less than 16 pounds per square yard with pointed joints covered with No. 26 U. S. gauge sheet metal with one (1) inch lapped seams nailed to the wood beams when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are spaced more than sixteen (16) inches on centers;

(b) Two thicknesses of one-quarter ($1/4$) inch asbestos board laid with tight staggered joints and nailed to the beams, when spaced not more than sixteen (16) inches on centers, or nailed to furring

strips when the floor beams are more than sixteen (16) inches on centers.

(c) Metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($3/4$) inch thick.

Rule 5. Attachment to Ceiling. Fire-retarding ceilings in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations shall be attached to wood floor beams and girders in such manner as to maintain an air space between the wood beams, and all wood beams shall be seasoned before applying the protective coat.

Rule 6. Openings in Fire-Retarding Floors. Pipes or conduits which pass through floors shall be fitted with metal thimbles and made watertight for a height of three (3) inches above the floor.

Rule 7. Columns. All structural posts and columns in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials accepted in fireproof construction; except that an air space shall not be required around steel or cast iron columns.

Where necessary for protection against mechanical injury, the fire-retarding protection on columns shall be jacketed to a height of five (5) feet from the ground with No. 4 U. S. gauge metal.

Rule 8. Girders. All girders in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials acceptable in fireproof construction; except that an air space need not be provided around steel girders.

Rule 9. Shaft Enclosures. Existing stairways and vertical shafts in non-fireproof business buildings hereafter converted to be used as garages, motor vehicle repair shops or oil selling stations shall be enclosed in fire-retarding partitions continued through the non-fireproof floor construction, and when unfilled wood stud partitions are used, the space between the floor beams shall be fire-stopped with incombustible materials. All openings in such partitions shall be protected with accepted metal-covered fire doors or windows. Wherever necessary for protection against mechanical injury, the partition shall be jacketed to a height of five (5) feet on the garage side with No. 4 U. S. gauge metal. Any one of the following forms of partitions shall be accepted for the enclosure:

(a) Two by four inch wood studs, spaced not more than sixteen (16) inches on centers, covered both sides with metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($3/4$) of an inch thick;

(b) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($7/8$) inch wood sheathing, one-half ($1/2$) inch plaster boards with pointed joints and No. 26 U. S. gauge sheet metal with one-inch lapped seams;

(c) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($7/8$) inch wood sheathing, two thicknesses of one-quarter ($1/4$) inch asbestos boards laid with tight staggered joints and jacketed with No. 16 U. S. gauge metal on the garage side to a height of five (5) feet.

(d) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, filled in solidly between the studs with four inches of approved fireproof materials and covered on both sides with No. 26 U. S. gauge metal;

(e) Existing wood stud, lath and plaster partitions covered on the garage side with No. 26 U. S. gauge sheet metal with one-inch lapped seams.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Friday, November 20, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent ($12\frac{1}{2}\%$) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds ($\frac{2}{3}$) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half ($1\frac{1}{2}$) inches in size [with a one and one-quarter ($1\frac{1}{4}$) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half ($1\frac{1}{2}$) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half ($\frac{1}{2}$) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

- (a) For Standard one-half (½) inch heads—
 - 8 feet in 12 foot bays;
 - 9 feet in 11 foot bays;
 - 10 feet in 10 foot bays;
 - 11 feet in 9 foot bays;
 - 12 feet in 5 to 8 foot bays;
- (b) For Conran* one (1) inch heads—
 - 20 feet in 5 to 12 foot bays.
- (c) For Conran* one and one-quarter (1¼) inch heads—
 - 25 feet in 5 to 12 foot bays.
- (d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half (1/2) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
3/4 inch	1 head
1 " "	2 heads
1 1/4 " "	3 " "
1 1/2 " "	5 " "
2 " "	10 " "
2 1/2 " "	20 " "
3 " "	36 " "
3 1/2 " "	55 " "
4 " "	80 " "
5 " "	140 " "
6 " "	200 " "
7 " "	300 " "
8 " "	420 " "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
1 1/4 " "	2 heads
1 1/2 " "	3 " "
2 " "	4 " "
2 1/2 " "	6 " "
3 " "	9 " "
4 " "	18 " "
5 " "	34 " "
6 " "	51 " "
7 " "	75 " "
8 " "	105 " "

(c) For Conran* one and one-quarter (1 1/4) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 1/4 inch	1 head
1 1/2 " "	2 heads
2 " "	3 " "
2 1/2 " "	4 " "
3 " "	6 " "
4 " "	12 " "
5 " "	21 " "
6 " "	40 " "
7 " "	60 " "
8 " "	84 " "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half (2 1/2) inch pipe does not supply more than sixteen (16) standard one-half (1/2) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half (1/2) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter (1 1/4) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

At the base of the main riser;

At each alarm valve;

At each dry-pipe valve;

At each gravity tank;

At each pressure tank.

At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

Above dry-pipe valves;

Below dry-pipe valves;

At the pressure tank;

At the air compressor;

Above the alarm valve;

Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a **main control or shutoff valve** arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a **drying chamber** containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads.128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor.].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employes instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before the board—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of the board, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of the board is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

BOARD OF STANDARDS AND APPEALS,
Room 1001, Municipal Building,
New York City.

Enclosed please find two dollars and a half (\$2.50) for subscription for one year to THE BULLETIN OF THE BOARD OF STANDARDS AND APPEALS. Please mail THE BULLETIN to

Name

Street

P. O.

My subscription is to begin with the issue for....., 1926.

BOARD OF STANDARDS AND APPEALS

WILLIAM E. WALSH, Chairman

Commissioners

HENRY L. CONNELL

JOSEPH FLANAGAN

JOHN GUILFOYLE

FIRE CHIEF JOHN KENLON

JAMES O'CONNOR, Secretary

EDWARD V. BARTON, Chief Clerk

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board

CONTENTS

This issue of the Bulletin contains, in the order given—

Docket.

Call of Clerk's Calendar.

The Trial Calendar.

Notices in Building Zone Cases.

Minutes of Regular Meeting, November 17, 1925, at 10 a. m.

Minutes of Regular Meeting, November 17, 1925, at 2 p. m.

Rules.

Notice of Public Hearing.

Progress Report.

PUBLIC HEARINGS

Tuesdays, at 10 a. m. and 2 p. m.

Special meetings as published in this Bulletin.

Call of Clerk's Calendar, Tuesdays, at 2 p. m.

All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of the board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The *Clerk's Calendar* consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, November 24, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, December 1, 1925, at 2 o'clock.

The *Clerk's Calendar* is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

CALENDAR

DOCKET.

New Cases Filed Week Ending November 18, 1925.

CALL OF CLERK'S CALENDAR.

BUILDING ZONE CASES.

Tuesday, November 24, 1925, at 2 p. m.

270-25-BZ.
APPLICANT—John J. Dunnigan, for Schinasi Commer-
cial Corp., owner.
PREMISES—32-36 West 100th street, Manhattan.
APPLICATION, under section 21 of the building zone
resolution,
TO PERMIT in a business district and within 200 feet of a
hospital the use and occupancy of an existing build-
ing as a garage for the storage of more than five
(5) motor vehicles.

523-25-BZ.

THE RESOLUTION:

(540-25-A)

WHEREAS, Edward Whitwell, secretary and treasurer for Starlight Amusement Park, Inc., owner, filed, May 26, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 177th street and Bronx River, 200 ft. from Devoe avenue, The Bronx; and

WHEREAS, the order of the fire commissioner reads:

"9. Provide standpipe fire line system, in accordance with the regulations of the Board of Standards and Appeals in bathing pavilion.";

and

WHEREAS, the building is stucco on frame, two (2) stories in height, 309 ft. by 109 ft., irregular (approximately 20,000

MINUTES

sq. ft.) in area; divided by 6 in. masonry walls with single fireproof doors at the openings therein, into six subdivisions; OCCUPIED as a bathing pavilion for 1,045 persons; and

WHEREAS, appellant contends that the existing six (6) inch walls are fire walls within the meaning of the code.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that a 4 in. standpipe line shall be installed, extended from the existing yard fire hydrants system; the standpipe system otherwise shall comply with the rules in all other respects; and this modification is *granted on the further condition* that the yard hydrant system shall show and maintain an average pressure of not less than 25 pounds; and *granted* only so far as it affects the bathing pavilion.

THE RESOLUTION:

(759-25-A)

WHEREAS, John J. Gilmartin, for North Ward Realty, owner, filed, July 20, 1925, an appeal, from an order of the fire commissioner, affecting premises 45-49 John street and 1-5 Dutch street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 70610-F, dated January 13, 1925, reads:

"1. Raise standpipe tank to not less than 20 ft. above the outlet in the highest story and properly support the same, also arrange the house water supply pipe so that the same will connect with tank on the outside thereof above the 3500 gallon mark, sec. 20, ch. 12, Code of Ordinances."

and

WHEREAS, the building is fireproof, 12 stories in height, 75 ft. by 113 ft. in area; OCCUPIED for salesrooms and offices; equipped with a 9,000 gallon tank for the standpipe and also the house supply, the distance between the bottom of the tank and the outlet on the highest story being 10 ft.; and

WHEREAS, the appellant contends that the tank and the location were approved by the fire department and other departments having jurisdiction, at the time of its installation; that there is no hazardous occupancy in the premises, and proposes to comply with the orders as to the location of the house supply pipe.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the existing roof tank shall be subdivided by steel partition, providing independent supply of not less than 3500 gallons for the standpipe system; that the standpipe system shall comply with the rules and regulations in all other respects; that the entire top story use and occupancy shall be restricted to executive offices; that not less than three (3) additional approved 2½ gallon chemical fire extinguishers shall be installed on the top story, located as directed by the fire commissioner.

THE RESOLUTION:

(589-24-A)

WHEREAS, Corona Chemical Co., Inc., lessee, filed, April 25, 1924, an appeal, from an order of the fire commissioner, affecting premises 43-45 Wooster street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 21266-LC, dated November 22, 1923, reads:

"Section 272-G, Ch. 10, Code of Ordinances, prohibits the issuance of a permit for a wholesale drug store or chemical supply house in a building having a factory or workshop where the applicant's business is not separated from the rest of the building by fireproof walls and floors.

"You are, therefore, hereby ordered to:

"1. Discontinue the maintenance of a wholesale drug store or chemical supply house in this building.";

and

WHEREAS, the building is non-fireproof, six stories in height, 50 ft. by 94 ft. in area; OCCUPIED tenant factory, appellant occupying the 4th and 5th stories as a chemical supply house, 63 persons above the 1st story; and

WHEREAS, appellant contends that the stairways and stairway enclosures are fireproof and that the building is amply provided with exits; and

WHEREAS, this appeal was dismissed for lack of prosecution June 9, 1925, and reopened by vote of the board.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the quantity of alcohol maintained on the premises shall not exceed ten (10) barrels, stored in an approved enclosure; that any factory occupancy, other than that incidental to the conduct and operation of the Corona Chemical Co.'s business, shall be restricted to the 1st story, on which story not more than four (4) people shall be engaged in manufacturing, restricted to non-hazardous use and occupancy.

1447-24-A.

APPELLANT—Keiner Williams Stamping Co., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—8746 123rd street, Richmond Hill, Borough of Queens.

THE RESOLUTION:

(1447-24-A)

WHEREAS, Keiner Williams Stamping Co., owner, filed, December 8, 1924, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 8746 123rd street, Richmond Hill, Borough of Queens; and

WHEREAS, the order of the fire commissioner, No. 91204-LC, dated November 18, 1924, reads:

MINUTES

"With reference to your application for a permit to store fuel oil at the above location, I regret to inform you that I am without power to grant such a permit for the reason that the storage of fuel oil at the above location is not in accordance with the rules adopted by the Board of Standards & Appeals on November 6th, 1919, amended January 18th, 1924.

"No fuel oil system, shall be operated or oil placed in the system until after a permit has been issued by the Fire Commissioner. Plans for each fuel oil system shall be submitted to the Fire Commissioner, together with a Certificate from the Superintendent of Buildings, indicating that the proposed construction of the enclosure and the location of the tanks is in accordance with the requirements of the building code and Rules 16 and 32.

"You are therefore ordered to remove all fuel oil from the storage tank and discontinue the further storage and use of fuel oil at the above location."

and

WHEREAS, the building is non-fireproof, one story in height, 35 ft. by 104 ft. in area; OCCUPIED for sheet steel stamping, 7 persons; and

WHEREAS, a fuel oil burning system has been installed consisting of a 1,500 gallon fuel oil storage tank, a No. 2 Goulds Manufacturing Co. pump and Rockwell Engineering Co. burners with the necessary valves and piping; and

WHEREAS, appellant contends that the fuel oil burning system was installed in 1911 and that permits for the use of the system have been issued subsequent to that date.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the fuel oil burning system shall be installed in accordance with the rules of the board of standards and appeals in all respects other than the hydrostatic test on tank and piping, *on condition* that a certificate of factory test shall be filed with the fire commissioner as to tank; and that standard wrought-iron piping or its equal shall be used throughout the fuel oil burning equipment.

THE RESOLUTION:

(294-25-A)

WHEREAS, Dingwell Bros., Inc., owner, filed, March 16, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 62 Stanhope street, Brooklyn; and

WHEREAS, the order of the fire commissioner, dated April 15, 1924, reads:

"Order No. 88215-LC:

"1. Provide a covering of approved fire retarding material on ceiling of 1st story in garage, as prescribed by the rules of the Board of Standards and Appeals. (See Vol. 2, No. 36, page 620, Bulletin of the Board of Standards and Appeals, Sept. 6, 1917, and Vol. 2, No. 45, page 795, Nov. 8, 1917.)

"2. Separate boiler from remainder of building by unpierced wall of solid masonry at least 8 in. in thickness. Entrance to boiler room to be from exterior of building only. Chap. 10, Sec. 159-1, Code of Ord.;"

and

WHEREAS, the building is non-fireproof, two stories in height, 25 ft. by 126 ft. 5½ in., irregular in area; with a one-story extension at the side. OCCUPIED: 1st story, garage for five automobiles and manufacture of carbonated beverages; 2nd story loft, the ceiling of 1st story being open joist construction; the boiler room being located in the one-story extension and enclosed in brick walls with one door opening; and

WHEREAS, appellant contends that no oils or greases are stored in the garage portion of structure.

Resolved, that the order of the fire commissioner be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

CASE DISMISSED

APPEAL FROM ADMINISTRATIVE ORDER.

The chairman called attention to the following case, where notice of intention to appeal was offered for filing; but where, despite notices from this office, papers have not been completed, thus tying the hands of the administrative official in the performance of his duty: 1042-24-A.

APPELLANT—Samuel Bloch, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—412-416 East 23rd street, Manhattan.

Negative: Commissioner Guilfoyle	1
Absent	0

THE RESOLUTION:

(680-25-BZ)

WHEREAS, Edward P. Doyle, for Mollie Arvan, owner filed, June 30, 1925, an application, under the building zone resolution, to permit in a residence district the maintenance of a garage for the storage of two pleasure motor vehicles, two spaces rented to persons not residing on the premises; premises 2522 Hughes avenue, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 17, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Hughes avenue is in a residence district, that East 191st street is in a residence district and that Fordham road is in a business district; and

WHEREAS, the order of the fire commissioner, dated June 13, 1925, reads:

"With reference to your application dated March 16, 1925, for a permit to conduct business as above at

2522 Hughes Ave., Rear, this location appears to be shown on the use district map accompanying the building zone resolution of the Board of Estimate and Apportionment as a RESIDENCE district. Inasmuch as you are conducting or propose to conduct a business which is a prohibited use at this location, your application is denied.

"No further consideration can be given unless the Superintendent of Buildings having jurisdiction advises or certifies that the business conducted or to be conducted is a lawful one at this location.

"Be further advised that the occupancy as above noted without a permit from the Fire Commissioner is in violation of the Code of Ordinances and subject to penalty."

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 18 ft. and a depth of 17 ft.; to be occupied as a garage for the storage of two pleasure motor vehicles, two spaces rented to persons not residing on the premises; and

WHEREAS, the board deemed this application, under section 21, "practical difficulty and unnecessary hardship," to be a case where, in its discretion, temporary relief should be granted.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted, for a temporary period of two years, on condition that the capacity of the garage be limited to two automobiles of the pleasure car type, space for one of which may be rented to persons not residing on the premises; that egress and entrance from this garage to a public highway shall be through a private right-of-way within the business area to Fordham road; that there shall be no sign exposed or displayed on the premises; and there shall be no gasoline storage equipment on the premises.

981-25-BZ.

APPLICANT—Laurence McGuire, for 36th Street & Eighth Avenue Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a two times height district the erection and maintenance of the street walls to a height exceeding the prescribed limit required by the zone resolution.

PREMISES AFFECTED—520-530 Eighth avenue, 267-275 West 36th street and 260-264 West 37th street, Manhattan.

APPEARANCES—

For Applicant: Laurence McGuire.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle and Fire Chief Kenlon	5
Negative	0
Absent	0

THE RESOLUTION:

(981-25-BZ)

WHEREAS, Laurence McGuire, for 36th Street and 8th Avenue Corporation, owner, filed, September 23, 1925, an application, under the building zone resolution, to permit in a two-times height district the erection and maintenance of the street walls to a height exceeding the prescribed limit required by the zone resolution; premises 260-264 West 37th street, 267-275 West 36th street and 520-530 Eighth avenue, Borough of Manhattan; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 17, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

MINUTES

WHEREAS, the use district maps accompanying the building zone resolution show that West 37th street is in a 2 times district east of Eighth avenue; that it is in a 1½ times district west of Eighth avenue; that Eighth avenue is in a 2 times district on east side and in a 1½ times district on the west side; and

WHEREAS, the decision of the superintendent of buildings, rendered September 16, 1925, reads:

"Front on 37th St. is of excessive height. Section 8 Building Zone Resolution.";

and
WHEREAS, the proposed building is of fireproof construction, 24 stories in height, with a frontage of 150 ft. 11 in. and a depth of 197 ft. 6 in. (irregular); to be occupied as a manufacturing building; and

WHEREAS, the board deemed that the applicant established his basis of appeal under section 21 on the ground of unnecessary hardship, and that in the exercise of its discretion the application should be granted under safeguarding conditions.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the height district regulations of the building zone resolution, and that the application be and it hereby is *granted*, so far as it affects the forty-nine (49) ft. return on the 37th street frontage, subject to the 2 times height district regulation of the Eighth avenue frontage, *on condition* that the erection, use and occupancy of the entire structure shall comply with the zoning regulations in all other respects; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

377-20-BZ.

APPLICANT—Barnet Budoff, present lessee, for Transit Construction Commissioner for the City of New York, owner.

SUBJECT—Application for extension of permit (re: decision of fire commissioner) to permit in a business district the maintenance of an open-air parking space for more than five motor vehicles.

PREMISES AFFECTED—580-598 Fulton street, Brooklyn.

APPEARANCES—

For Applicant: Elmer Blake.

For Opposition: None.

ACTION OF BOARD—Extension of temporary permit granted for one year from October 28, 1925, on same conditions.

CONDITIONS—As specified in resolution.

THE VOTE TO EXTEND PERMIT—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(377-20-BZ)

WHEREAS, Chas. E. Henderson, for the Transit Construction Commissioner for the City of New York, owner, filed, June 4, 1920, an application, under the building zone resolution, to permit in a business district the maintenance of an open-air parking station for more than five motor vehicles; premises 580-598 Fulton street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, July 7, 1920, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Fulton street is a business district; and

WHEREAS, the decision of the fire commissioner, rendered May 13, 1920, in acting on application for a permit, reads:

"Maintenance of your garage (parking station) is a violation of section 4, of article 2, of the building zone resolution of the Board of Estimate and Apportionment of the City of New York, adopted July 25, 1916, inas-

much as garage (parking station) is used for the storage of more than five motor vehicles.

"You are, therefore, ordered to reduce the number of automobiles, the fuel tanks of which are not empty, stored at the above location, to five, for the reason that the storage of a greater number is prohibited in a garage (parking space) located in a business zone.";

and
WHEREAS, the premises consist of an irregular shaped plot of ground facing on Fulton street and Ashland place, which the applicant has leased from the City of New York with the understanding that he could use it for a parking station for more than five motor vehicles and has spent a large amount of money improving site for such purpose; and

WHEREAS, there would be unnecessary hardship in preventing applicant from maintaining the station; and

WHEREAS, this application was granted by the board of appeals at its meetings, July 7, 1920, January 24, 1922, November 8, 1922, October 30, 1923, and October 28, 1924, for a temporary period, and applicant requested a further extension of time for the maintenance of this parking station.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted* for a temporary period of one year from October 28, 1925.

CASE DISMISSED.

BUILDING ZONE APPLICATION.

The chairman called attention to the following case, where notice of intention to appeal was offered for filing; but where, despite notices from this office, papers have not been completed, thus tying the hands of the administrative official in the performance of his duty: 881-24-BZ.

APPLICANT—Otilia Cheronnet, owner.

SUBJECT—Application (re: order of fire commissioner) to permit in a residence district the maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1292 Shakespeare avenue, The Bronx.

APPEARANCES—None.

ACTION OF BOARD—Application dismissed for lack of prosecution.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(881-24-BZ)

WHEREAS, the foregoing applicant has filed with the board of standards and appeals an application under the building zone resolution, affecting the premises in question; and

WHEREAS, the applicant has failed to complete his papers, though duly notified to do so.

Resolved, that the application be and it hereby is *dismissed* for lack of prosecution.

AREA FIXED.

(861-25-BZ)

The chairman presented and read a communication from Denis M. Hurley, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises 168-170 Decatur street, Brooklyn.

The following area was approved by the board:

Both sides of Decatur street from Lewis avenue to Summer avenue.

THE RESOLUTION:

(357-25-A)

WHEREAS, Hugo Sippel, owner, filed, March 6, 1925, an appeal from an order of the fire commissioner, affecting premises west side of Sheridan avenue, 200 ft. south of Mt. Eden avenue, The Bronx; and

WHEREAS, the order of the fire commissioner, No. 28237-LC, dated February 21, 1925, reads:

"With reference to your application, dated Dec. 3rd, 1924, for a permit to maintain a non-storage garage

at the above location, I regret to inform you that I am without power to grant such permit because the building is of frame construction.

"Sec. 90, Chapter 5, Code of Ordinances, provides that 'no frame * * * structure shall be hereafter built * * * within * * * the fire limits.'

"You are therefore ordered to * * *

"Remove all motor vehicles, the fuel tanks of which are not empty and to discontinue the use of premises as a garage.";

and

WHEREAS, the premises consist of a plot of ground having a frontage of 50 ft. on Sheridan avenue, upon which is located a dwelling and also a one-story frame garage, 10 ft. by 18 ft. in area; OCCUPIED for the storage of one automobile, the property of the owner of the premises; and

WHEREAS, appellant contends that the garage is located 65 ft. from the nearest building, and proposes to line the interior of the garage with sheet rock or a fireproof material.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the interior walls shall be lined with plaster board and metal; that the occupancy shall be restricted to one automobile, the property of the owner and occupant of the premises; and *on condition* that no gasoline storage equipment shall be maintained on the premises.

THE RESOLUTION:

(602-25-A)

WHEREAS, Edward P. Doyle, for Abraham Kaplan, owner, filed, June 10, 1925, an appeal from an order of the fire commissioner, affecting premises 1186 Eastern parkway, Brooklyn; and

WHEREAS, the order of the fire commissioner, No. 94687-LC, dated March 9, 1925, reads:

"1. Install an approved 4 in. standpipe equipment in accordance with sec. 581, art. 28, ch. 5, Code of Ordinances.

"Standpipe equipment is required in buildings exceeding 10,000 sq. ft. in area.

"2. You are therefore ordered to remove all fuel oil from the premises and discontinue the storage and use of fuel oil until compliance with said order.";

and

WHEREAS, the building is non-fireproof, four stories in height, 100 ft. by 178 ft. in area; OCCUPIED as an apartment house; and

WHEREAS, appellant contends that plans for the building were approved by the tenement house department and the bureau of buildings issued a certificate of occupancy in October, 1924, for the tenement house after the construction plans had been approved showing the omission of the standpipes.

Resolved, that the order of the fire commissioner be and

MINUTES

it hereby is *modified*, and the appeal be and it hereby is *denied*, as to Item 1; and the appeal, as to Item 2 be and it hereby is *granted*, on condition that the fuel oil burning equipment shall be installed in accordance with the fuel oil rules of the board of standards and appeals in all respects.

THE RESOLUTION:

(645-25-A)

WHEREAS, James McGuire, for the Fifth Avenue Coach Company, owner, filed, July 23, 1925, an appeal from a decision of the fire commissioner, affecting premises 605-619 West 132nd street, Manhattan; and

WHEREAS, the decision of the fire commissioner, App. No. 1212-22, dated June 11, 1925, reads:

"The amount of water in the gravity in excess of 25,000 gallons shall have to be specified by the Board of Standards and Appeals;"

and

WHEREAS, the building is fireproof, with stone concrete floor arches, three stories and basement in height, 400 ft. by 199 ft. 10 in. in area; OCCUPIED as a garage and factory (the 3rd story being in process of construction at the present time), basement, 75 persons; 1st story, 100 persons; 2nd story, 100 persons; 3rd story, 400 persons; and

WHEREAS, the appellant proposes to install a 40,000 gallon gravity tank connected by an 8 in. dead riser to the underground cross connections, which in turn are connected with sprinkler risers and to four 6 in. header lines direct to the 6 in. street mains, properly metered and checked; there is also a 100,000 gallon underground reserve reservoir, separately water supplied, connected with the sprinkler system through a 1,000 gallon per minute fire pump, and appellant requests the board to approve the 40,000 gallon gravity tank as adequate in accordance with section 5 of the sprinkler rules.

Resolved, that the decision of the fire commissioner be and it hereby is *granted*, only so far as it affects the capacity of the sprinkler supply tank in excess of 25,000 gallons, on condition that the total capacity shall not exceed 40,000 gallons; that in addition to any other requirement an independent 6 in. discharge line shall be provided from the bottom of the tank direct to the house sewer, equipped with a quick-opening valve located inside the center or main entrance on the 132nd street front, identified with a metal sign, affixed to the wall, directly below the quick-opening valve, indicating the use and purpose of the valve, with letters not less than 1½ in. in height.

THE RESOLUTION:

(687-25-A)

WHEREAS, Francis H. Dike, for Francis D. Bailey, owner, filed, July 1, 1925, an appeal, from an order of the fire commissioner, affecting premises 60 Grand street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 79437-F, dated June 9, 1925, reads:

"1. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per sq. in., extending from cellar to roof, with necessary check valves and 2½ in. regulation Fire Department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure, each outlet to be provided with sufficient feet of 2½ in. standard hose attached thereto;"

and

WHEREAS, the building is non-fireproof, seven stories in height, 25 ft. by 92 ft. in area; OCCUPIED as a factory building, about 10 persons on each story; and

WHEREAS, the appellant claims the conditions in this building are the same as those of No. 64 Grand street, appealed under Cal. No. 1523-22-A, i. e., equipped with a sprinkler system, and requests the board to grant a similar modification in this case; and

WHEREAS, appellant contends the building as constructed did not come within the purview of the regulation as to standpipe requirement but, due to the grading and repaving of the street, the building is now 86 ft. in height.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the existing sprinkler system shall be maintained, and *granted* only so long as conditions as to use and occupancy shall remain substantially unchanged.

THE RESOLUTION:

(694-25-A)

WHEREAS, S. W. Eckman, owner, filed, July 3, 1925, an appeal, from an order of the fire commissioner, affecting premises 10 Greenway terrace, Forest Hills, Borough of Queens; and

WHEREAS, the order of the fire commissioner, No. 95610-LC, dated April 6, 1925, reads:

"1. Uncover storage tank so that an inspection may be made to ascertain if tank is constructed in accordance with the requirements of rule 5 and rule 20 of the Fuel Oil Rules.

"2. Place fuel oil storage tank or tanks in permanent position and make hydrostatic test in the presence of an inspector from the Fire Department, as per rule 7, sec. 1-a of the Fuel Oil Rules.

"3. Provide a hydrostatic test of not less than one hundred pounds per sq. in. for all Grade B fuel oil carrying piping, as per rule 25, sec. 2 of the Fuel Oil

MINUTES

Rules.

"10. Provide an easily accessible valve to shut off the supply in the discharge line from each storage tank, as per rule 26-a of the Fuel Oil Rules.

"15. Remove all fuel oil from the premises until a permit has been issued by the Fire Commissioner, as per rule 16 of the Fuel Oil Rules.

and

WHEREAS, the building is non-fireproof, two stories and attic in height, 25 ft. by 35 ft. in area; OCCUPIED as a dwelling for one family; having installed a fuel oil heating system which does not fully meet with the requirements of the fuel oil rules adopted by the board; and

WHEREAS, the appellant claims the system has been installed over three years, using the Baker oil burner; that it would be an undue hardship if compelled to dig up the tank and piping to permit a test re: Items 1, 2 and 3; that the supply pipe is a suction line, all points of which are above the tank; no oil can run from tank, except when the system is properly working; re: to Item 15, he requests the board to permit the storage of fuel oil necessary for the operation of the system.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Items 1 and 2, *on condition* that proof satisfactory to the fire commissioner shall be submitted in lieu of the hydrostatic test requirement for tanks; as to Item 3, *on condition* that an affidavit of test shall be filed with the fire commissioner; as to Item 10, *on condition* that an automatic trip valve shall be installed on the fuel oil burning equipment; and as to Item 15, *on condition* that the foregoing conditions shall be complied with and that the installation otherwise shall comply with the fuel oil rules in all respects.

THE RESOLUTION:

(720-25-A)

WHEREAS, Michael B. Rauert filed, July 8, 1925, an appeal from an order of the fire commissioner, affecting premises 361 Wythe avenue, Brooklyn; and

WHEREAS, the order of the fire commissioner, No. 96987-LC, dated June 18, 1925, reads:

"Discontinue maintenance of a garage in the above premises as same is of frame construction. Sec. 5, Ch. 5, Par. 4, and Sec. 90.";

and

WHEREAS, the premises consist of a plot of ground having a frontage of 40 ft. on Wythe avenue and a depth of 109 ft., upon which is located a two-story frame dwelling; to the north of which is located a one-story frame open shed (14 ft. in height), used as a garage for the storage of two (2) motor trucks; and

WHEREAS, appellant contends that the trucks are used in the conduct of his business and that "no smoking signs," a waste can and four (4) sand pails have been provided.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that not more than two (2) motor vehicle trucks shall be maintained on the premises in the open shed not exceeding in area 20 ft. by 34 ft. deep; and that no gasoline storage shall be maintained on the premises.

THE RESOLUTION:

(738-25-A)

WHEREAS, William H. Gompert, for the City of New York, filed, July 15, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises on the block Bedford avenue, Quentin road, East 27th street and Avenue P, Brooklyn; and

WHEREAS, the order of the fire commissioner, No. 97241-LC, dated July 14, 1925, reads:

"With reference to your application dated January 8th, 1925, for a permit to store liquified chlorine at the above location, I regret to inform you that I am without power to grant such a permit for the reason that Sec. 214-A, Chap. 10, C. O., N. Y., provides that no permit shall be issued for the storage of liquified chlorine in any building used for a hotel lodging house, tenement house or dwelling in any building lot or enclosure located within 50 ft. of the nearest wall of a building occupied as a hospital, school, theatre or other place of public amusement or assembly.";

and

WHEREAS, the building is fireproof, five stories in height, 216 ft. 8 in. by 70 ft. 10 in. in area; OCCUPIED as a public school, 650 pupils on each story; and

WHEREAS, the appellant claims that the quantity of liquified chlorine gas stored in the pump room of basement is limited to 20 pounds; that it is automatically controlled, placed in a wooden cabinet with glass door, which in turn is encased in a gas-tight metal cabinet having a vent to outer air; the steel bottle of liquified chlorine gas in a steel jacket which is kept filled with water by means of a permanent connection and overflow.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the quantity of chlorine stored on the premises shall be restricted to one 20-pound cylinder, said cylinder to be submerged in water in a metal reservoir of not less than 55 gallon capacity, equipped with a trip releasing valve on water supply line; said reservoir shall be enclosed in a 4 in. terra cotta partition with not more than one opening thereto, equipped with rabbetted door; and that the enclosure shall be vented direct to the outer air by a duct of not less than 24 sq. in., protected with a mesh or register at both intake and outlet.

THE RESOLUTION:

(711-25-A)

WHEREAS, Samuel Rosenblum, for Resolute Investing Company, owner, filed, July 6, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 657-9 Broadway, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated May 14, 1925, reads (Order No. 76415-F):

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, * * *"; and

WHEREAS, the building is non-fireproof, faces on two streets, six stories in height; the Broadway front wall being 90 ft. 8 in. in height and the Mercer street front being 93 ft. in height, 45 ft. by 200 ft. in area; OCCUPIED as a tenant factory, approximately 20 persons per story; and

WHEREAS, appellant contends that the height is only slightly in excess of the 85 foot limit and that the premises are amply supplied with exits as well as a sprinkler system and an automatic fire alarm system.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that a standard two-source sprinkler system shall be installed, equipped with central office connection; that the building shall not be increased in area, height or dimensions; and that conditions as to occupancy and use shall remain unchanged.

THE RESOLUTION:

(613-25-A)

WHEREAS, Herman Rapp, Jr., for Louis K. Liggett Company, lessee, filed, June 10, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 1485 Broadway, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated May 5, 1925, reads:

"1. Install required number of safety valves of allowable size, properly connected and set so that they will discharge within the maximum allowable pressure * * *

"2. Seal all openings in wall separating refrigerating machinery room from other parts of the building except such openings that are now protected by tight, self-closing doors * * *.

"3. Provide a suitable method of ventilating refrigerating machinery room to outer air * * *.

"6. Have person in charge of operation of refrigerating plant during each shift secure a Certificate of Qualification from Police Department * * *";

and

WHEREAS, the building is fireproof, 18 stories in height, 143 ft. by 58 ft. in area. OCCUPIED: 1st story, stores; upper stories as an office building; and

WHEREAS, in the store and in the sub-basement portion of the premises there are refrigerating machines installed. Three of these machines are located on top of the large refrigerator in the sub-basement soda room, which room is enclosed with fireproof partitions and fireproof self-closing doors. One of them is located in the electric motor room of the dumbwaiter, which is enclosed with fireproof partitions and fireproof self-closing doors, all of which motor room is located within the soda room mentioned. Two of these machines are on the store floor in the soda room, which is enclosed with fireproof partitions. One is under the soda fountain counter on the first floor in the store proper. These machines have a capacity of 1-10 ton; are operated by a 1/4 horsepower motor; the refrigerator is sulphur dioxide, 11 pounds in each unit; and

WHEREAS, appellant contends that the proposed new code eliminates the necessity of the required safety valves; that the sub-basement and the soda room on the 1st floor ventilate directly to the outer air; that the location of the machines make it impossible to comply with Item 3 of the order, and in re: Item 6, contends that under the proposed code the certificate of qualification will not be necessary for this type of installation.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a temporary period of six months from this date, *on condition* that no individual refrigerating unit shall be charged with more than 10 pounds of sulphur dioxide.

THE RESOLUTION:

(773-25-A)

WHEREAS, Samuel Rosenblum, for Max Goebel, owner, filed, July 27, 1925, an appeal, from an order of the fire commissioner, affecting premises 62 Grand street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, No. 80158-F, dated June 17, 1925, reads:

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per sq. in., extending from cellar to roof * * *"; and

WHEREAS, the building is non-fireproof, seven stories (86 ft.) in height, 25 ft. by 96 ft. in area at the 1st story and 25 ft. by 90 ft. above; OCCUPIED as a tenant factory; 53 persons above the 1st story; proposes to have 20 persons on each story. EXITS: An interior wooden stairway, extending from 1st story to roof; enclosed in fire-resisting partitions with fireproof doors at openings; a party wall fire escape balcony on the rear of the building connecting the buildings adjoining at east, also at west on each story; a fire escape on the front of the building, extending from street to top story; and

WHEREAS, the appellant claims the building is provided with fire alarm signal system; that the grade of the street was lowered a couple of years ago; that the building is small and has a light occupancy.

MINUTES

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the building shall be equipped with a one-source sprinkler system; that the legal required exits shall be installed and maintained; and *granted* only so long as conditions as to occupancy and use remain unchanged.

Negative 0

Absent 0

THE RESOLUTION:

(1050-25-A)

WHEREAS, Albert E. Kleinert, superintendent of buildings, filed, October 15, 1925, an appeal for revocation of Certificate of Occupancy No. 1114, existing building, issued June 4, 1925, premises 321 Madison street, Brooklyn, on the ground that "it now appears from a preponderance of material evidence that the change in occupancy from 'private garage for five cars' to 'garage for five business cars, space rented,' was in violation of article 2, section 4, zone resolution, as to use"; and

WHEREAS, the premises consists of a plot of ground 25 ft. by 100 ft. in a residence district under the building zone resolution, on which is located a two-story brick structure, 25 ft. by 60 ft. in area. OCCUPIED (for about 30 years prior to 1924) on the 1st story, private stable or garage; on the 2nd story, dwelling, one family; and

WHEREAS, it appears by affidavits of adjacent property owners and affidavit of former occupant and custodian of the building that said building was used, until May, 1924, as a private stable or private garage for not more than two horses nor more than two automobiles, the private property of the owner of the premises, and that up to that time, no space was rented in said premises; and

WHEREAS, it appears from testimony adduced at the hearing that, on July 25, 1916, the building was used as a private stable for not more than two horses, on the 1st story thereof, and as the coachman's dwelling, on the 2nd story thereof; and

WHEREAS, the board deemed that the superintendent of buildings under misapprehension issued a certificate of occupancy, No. 1114, for five business cars or space rented, in violation of the residence use district regulations of the building zone resolution.

Resolved, that the appeal of the superintendent of buildings be and it hereby is *granted*, and that the certificate of occupancy, No. 1114, for No. 321 Madison street, Brooklyn, be and it hereby is *revoked*.

THE RESOLUTION:

(449-25 A)

WHEREAS, Whitehall Garage, Inc., owner, filed, April 27, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 328 St. Marks avenue, Brooklyn; and

WHEREAS, the order of the fire commissioner, No. 87194-LC, reads:

"1. Discontinue the use of the premises for dwelling purposes for the reason that Sec. 154, Ch. 10, Code of Ordinances, provides that a permit shall not be issued for a garage in a building occupied as a dwelling unless the ground floor area of the garage does not exceed 5000 sq. ft. in area.

"In addition to the above, Sec. 154, Ch. 10, provides that no permit shall be issued for a garage in a building occupied as a dwelling unless the entrance to living apartments is direct from the street without passing the garage.";

and

WHEREAS, the building is non-fireproof, two stories in height, on an average of 42 ft. by 172 ft. (7,300 sq. ft.) in area at the 1st story. OCCUPIED: 1st story, public garage; 2nd story, one family; and

WHEREAS, the appellant claims the persons living on the 2nd story are interested in the maintenance of the garage; the stairway leads directly to the living apartment without passing through any other portion of the building; and he has filed Certificate of Occupancy No. 4530 of 1924, permitting the present occupancy, and requests the board to rescind fire department Order No. 87194-LC to discontinue the present garage.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the living quarters above garage shall be restricted to the front of the structure (the St. Marks avenue front), the area being 25 ft. and the depth 50 ft., with egress direct to the street; that the stairway shall be enclosed in fire-retarding material, with no opening therein to the garage area; that the ceiling of the 1st story, directly under the living quarters, shall be fire-retarded in accordance with the rules of the board of standards and appeals; that the occupancy of living quarters shall be restricted to the use of the owner of the premises or persons in his employ engaged in the operation of the garage.

THE RESOLUTION:

(241-25-BZ)

WHEREAS, Philip J. Sinnott, for Brolux Corp., Alfred Lockwood Brown, president, owner, filed, February 28, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 1202-1206 Lind avenue, east side, 93 ft. south of West 168th street, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 17, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Lind avenue, West 167th street and West 168th street are all in business districts; and

WHEREAS, the decision of the superintendent of buildings rendered January 30, 1925, reads:

"1. Erection of proposed garage for the storage of more than five motor vehicles in business district is contrary to provisions of Building Zone Resolution.";

and

WHEREAS, the proposed building is of non-fireproof construction, two stories in height, with a frontage of 100 ft. and a depth of 90 ft. 8 in.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, there was opposition to the granting of this application on the part of adjoining property owners, and the board deemed that the applicant did not substantiate the basis of his application under section 21,

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

552-25-BZ.

APPLICANT—Philip J. Sinnott, for Fieldstone Garage, Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles and also to permit same to be of non-fireproof construction (garage, with one street frontage, exceeding 7,500 sq. ft. in area).

PREMISES AFFECTED—East side of Broadway, 224 ft. north of 231st street, The Bronx.

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(552-25-BZ)

WHEREAS, Philip J. Sinnott, for Fieldstone Garage, Inc., owner, filed, May 27, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; and also to permit same to be of non-fireproof construction (garage, with one street frontage, exceeding 7,500 sq. ft. in area); premises east side of Broadway, 224 ft. north of 231st street, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 17, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that both Broadway and West 233rd street are in business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered April 17, 1925, reads:

"1. Erection of proposed garage for storage of more than five motor vehicles in business district is contrary to provisions of Building Zone Resolution.

"2. Garage with one street frontage exceeding 7500 square feet in area must be of fireproof construction.";

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 225 ft. and a depth of 97 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed that the applicant substantiated the basis of his application under section 21, in that the property, an interior plot situated in the rear of property fronting on a highway of business use skirting a railroad right-of-way cannot be used for dwelling purposes; and it would be a hardship to deprive applicant of the use

MINUTES

of the property as proposed, with such conditions as would safeguard the adjoining properties.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building shall be constructed fireproof throughout and located on the extreme rear of the property abutting the railroad right-of-way, and that an open courtyard and space of not less than 25 ft. in depth for the entire frontage of the garage shall be maintained open and unencumbered and that a wall of approved masonry shall be constructed, enclosing this said yard, said opening to be not less than 10 ft. in height or to the height of doorway of garage above curb level; that an open runway shall be maintained from the open yard direct to the street for a width of not less than 31 ft.; and that the fence wall of approved masonry shall be continuous through the runway direct to the Broadway street front on both sides of the driveway; that the proposed garage building shall not exceed a height of 15 ft. above the curb level; that there shall be no advertising signs erected, other than one projecting sign on the street front of the runway, indicating the title of the business; any gasoline storage equipment installed shall be located at the extreme southerly end of the structure; that the gable walls of the structure shall be unpierced throughout their entire height and length.

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

724-25-BZ.

APPLICANT—William F. Doyle, for Celia Aronofsky, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the change of occupancy of an existing building from private garage to store.

PREMISES AFFECTED—1515 Bryant avenue, The Bronx.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: Joseph Bourke, Henry French, Frank Krevoruck and others.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle..... 4

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(724-25-BZ)

WHEREAS, William F. Doyle, for Celia Aronofsky, owner, filed, July 9, 1925, an application, under the building zone resolution, to permit in a residence district the change of occupancy of an existing building from a private garage to a store; premises 1515 Bryant avenue, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 17, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Bryant avenue is in a residence district and that East 172nd street is in a residence district also; and

WHEREAS, the decision of the superintendent of buildings, rendered June 29, 1925, reads:

"Change of occupancy from private garage to store (business use) in a residence district is prohibited by provisions of the Building Zone Resolution.";

and

WHEREAS, the existing building is of non-fireproof construction, three stories in height, with a frontage of 70 ft. and a depth of 25 ft.; to be occupied as a store; and

WHEREAS, the board deemed that the basis of appeal under section 21, namely, hardship, has not been substantiated, in that the owners purchased this property since the adoption of the zoning resolution, and a further store invasion would adversely affect the adjoining properties.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

11-25-BZ.

APPLICANT—Charles Schaefer, Jr., for Daniel Houlihan, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit the extension, from a business district into a residence district, of a proposed building to be used as a motion picture theatre.

PREMISES AFFECTED—Southeast corner of White Plains avenue and 234th street, The Bronx.

APPEARANCES—

For Applicant: Charles Schaefer, Jr., Jeremiah Houlihan and Daniel Houlihan.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(11-25-BZ)

WHEREAS, Charles Schaefer, Jr., for Daniel Houlihan, owner, filed, January 5, 1925, an application, under the building zone resolution, to permit the extension, from a business district into a residence district, of a proposed building, to be used as a motion picture theatre; premises southeast corner of White Plains avenue and 234th street, Borough of Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 17, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that White Plains avenue is in a business district; that 233rd street is in a business district, and that 234th street is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered December 15, 1924, reads:

"2. Obtain permit from Board of Appeals for extending moving picture theatre in residence district on 234th Street.";

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 19 ft. on White Plains avenue and 80 ft. on 234th street; to be occupied as a motion picture theatre; and

WHEREAS, there was no opposition to the erection of this theatre on the part of neighboring property owners and the board deemed that the applicant substantiated the basis of his application under section 7-c, and the only opening in the residence district will be the required legal emergency exit.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the invasion within the residence area of the street frontage on 234th street shall not exceed a depth of 31 ft. beyond the business use district, and that an open court shall be incorporated and maintained; that any openings in rear gable wall shall be restricted to emergency exits as required by law; that there shall be no advertising signs of any nature or description erected or displayed on the 234th street frontage of the structure; that the easterly wall, court and gable shall be fin-

MINUTES

ished with face brick, architectural terra cotta or stone trimmings; that the street front on 234th street shall be finished with face brick, architectural terra cotta or stone trimmings; that the use and occupancy of the theatrical structure shall be restricted to the conduct and operation of a moving picture theatre of single auditorium, with no gallery or balcony; that there shall be no roof signs erected within the residence use district of the plot and that the property immediately adjoining and in the same and single ownership, for a frontage of not less than 40 ft., shall be improved in conjunction and at the same time with this proposed structure, as conforming use and conducted as an apartment house or private dwellings immediately to the rear on the 233rd street side;

Resolved, further, all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

267-23-BZ.

APPLICANT—John De Hart, for David Levine, owner.

SUBJECT—Application for temporary permit (re: order of fire commissioner) to permit in a residence district the maintenance of a garage for the storage of four pleasure motor vehicles, four spaces to be rented to persons not residing on the premises.

PREMISES AFFECTED—1319 Purdy street, The Bronx.

APPEARANCES—

For Applicant: John De Hart.

For Opposition: None.

ACTION OF BOARD—Application to extend permit denied.

THE VOTE TO EXTEND PERMIT—

Affirmative 0

Negative: Chairman Walsh, Commissioners

Connell, Flanagan and Guilfoyle..... 4

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(267-23-BZ)

WHEREAS, under date of November 13, 1923, the board granted to John De Hart, representing David Levine, owner, a temporary permit for a period not to extend beyond two years by agreement of applicant for the conduct of a garage for the storage of four automobiles of the pleasure car type, space for three of which to be rented to persons not residing on premises; premises 1319 Purdy street, Borough of The Bronx; and

WHEREAS, applicant now requests an extension of the permit for a further period; and

WHEREAS, the board deemed that in view of the agreement of the applicant that the occupancy of the garage for a prohibited use should not extend beyond two years, a further extension of the permit should not be granted.

Resolved, that the request be and it hereby is *denied*.

Adjourned 7.30 p. m.

JAMES O'CONNOR, *Secretary*.

RULES

SMOKING IN FACTORIES.

Adopted by the Board of Standards and Appeals,
August 13, 1918.

RULE 1. PERMIT.

(a) **Prohibition.** No person shall smoke, or carry a lighted cigar or cigarette in any factory as defined in Article 1, Section 2, of the State Labor Law, nor in any portion of a factory, within the City of New York, except in such protected portions or special classes of occupancies as are specified in Rule 2 of these rules, and then only after the issuance of a permit by the fire commissioner.

It shall be the joint and several duty of the owner and of the lessee or lessees of the building containing such factory or factories to cause to be posted in each and every entrance hall, stairhall or room throughout the building, as well as in every elevator-car, in English, and also in such other language or languages as the fire commissioner shall direct, a notice of such prohibition, and the penalty for its violation.

(b) **Application.** Application for such permit shall be made only by the owner of the building on suitable blank forms to be furnished by the fire commissioner.

(c) **Time Limit.** Such permit shall be for a definite period, not exceeding one year, and shall not be renewed upon expiration until a reinspection of the premises for which it is issued has been made for the purpose of determining whether existing conditions warrant a renewal.

(d) **Conditions.** The permit shall state the conditions under which, the hours between which, and the place or places in such factory where smoking may be permitted, and this permit shall be framed and kept posted in a conspicuous place in the factory.

(e) **Revocation.** Violation of any of the conditions specified in the permit, in addition to incurring such penalties as are prescribed by law, shall be full and sufficient cause for the revocation of such permit by the fire commissioner, and he shall not again issue a permit for the same premises until at least one year has elapsed.

RULE 2. PERMISSIBLE CASES.

Smoking may be permitted in:—

(a) Factories engaged in the manufacture of cigars, cigarettes, or smoking tobacco, when necessary for the efficient conduct of the business, provided that:

(1) No smoking other than that for sampling, testing and experimental purposes is carried on.

(2) Such smoking is conducted in a room provided especially for that purpose, separated from the rest of the building by fireproof or fire-resisting partitions, with all openings therein protected by self-closing fire doors, and, further, unless the building is of fireproof construction or equipped with an approved automatic sprinkler system, the floor and ceiling of such room shall be covered with fire-retarding material.

(3) Such chemical fire extinguishers as the fire commissioner may direct are installed.

(4) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

(b) Factories devoted entirely to one of the following occupancies:

Blacksmithing or horseshoeing;
Boiler making;
Brick, terra cotta or artificial stone works;
Forge shops;
Foundries;
Iron, steel, brass or copper works;
Machine shops;
Smelting;
Stone or monumental works;

provided that in any case:

(1) The building is not of wooden construction;

(2) Such chemical fire extinguishers as the fire commissioner may direct are installed;

(3) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Tuesday, December 22, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

(a) For Standard one-half (½) inch heads—

8 feet in 12 foot bays;
9 feet in 11 foot bays;
10 feet in 10 foot bays;
11 feet in 9 foot bays;
12 feet in 5 to 8 foot bays;

(b) For Conran* one (1) inch heads—

20 feet in 5 to 12 foot bays.

(c) For Conran* one and one-quarter (1¼) inch heads—

25 feet in 5 to 12 foot bays.

(d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 " "	2 heads
$1\frac{1}{4}$ " "	3 " "
$1\frac{1}{2}$ " "	5 " "
2 " "	10 " "
$2\frac{1}{2}$ " "	20 " "
3 " "	36 " "
$3\frac{1}{2}$ " "	55 " "
4 " "	80 " "
5 " "	140 " "
6 " "	200 " "
7 " "	300 " "
8 " "	420 " "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ " "	2 heads
$1\frac{1}{2}$ " "	3 " "
2 " "	4 " "
$2\frac{1}{2}$ " "	6 " "
3 " "	9 " "
4 " "	18 " "
5 " "	34 " "
6 " "	51 " "
7 " "	75 " "
8 " "	105 " "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ " "	2 heads
2 " "	3 " "
$2\frac{1}{2}$ " "	4 " "
3 " "	6 " "
4 " "	12 " "
5 " "	21 " "
6 " "	40 " "
7 " "	60 " "
8 " "	84 " "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads.128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor.].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employes instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before the board—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of the board, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of the board is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

CONTENTS

This issue of the Bulletin contains, in the order given—

Docket.

Call of Clerk's Calendar.

The Trial Calendar.

Notices in Building Zone Cases.

Minutes of Special Meeting, November 20, 1925, at 10 a. m.

Minutes of Special Meeting, November 20, 1925, at 2 p. m.

Minutes of Regular Meeting, November 24, 1925, at 10 a. m.

Minutes of Regular Meeting, November 24, 1925, at 2 p. m.

Rules.

Notice of Public Hearing.

Progress Report.

PUBLIC HEARINGS

Tuesdays, at 10 a. m. and 2 p. m.

Special meetings as published in this Bulletin.

Call of Clerk's Calendar, Tuesdays, at 2 p. m.

All hearings are held in Room 1013, Municipal Building Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of the board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, December 1, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, December 8, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Fire Chief Kenlon 4

Negative: Commissioner Guilfoyle..... 1

Absent 0

THE RESOLUTION:

(543-25-S)

WHEREAS, Samuel Rosenblum, for Catharine R. Forbes, lessee, filed, May 27, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in order of the fire commissioner and decision of superintendent of buildings, affecting premises 497 Sixth avenue, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered September 19, 1925, reads:

"1. Interior stairway not extended to roof.

"2. Second means of exit in accordance with section 271 of labor law not provided.";

and

WHEREAS, the order of the fire commissioner, No. 76948-LD, reads:

"1. Provide an outside iron balcony fire escape on front of the building * * *.

"2. Extend the interior stairway at the north side of building to the roof, as per section 271 of labor law.";

and

WHEREAS, the building is of non-fireproof construction, three stories in height, 23 ft. by 51 ft. 4½ in. in area at the 1st story and 23 ft. by 25 ft. in area above. OCCU-

MINUTES

PIED: 1st story, stores; 2nd story, furriers, 8 persons; 3rd story, furriers, 7 persons. EXITS: An interior wooden stairway, extending from the 1st story to 3rd story, enclosed in wood lath and plaster partitions with wooden doors at openings, a stationary iron ladder from 3rd story to a movable skylight in the main roof; ROOFS of adjoining buildings are of the same height; and

WHEREAS, the petitioner claims the roof of the 1st story extension is on the same level with a similar extension adjoining on the south through which egress may be had, and has filed a letter of consent to that effect signed by the owner of such adjoining building, and he further contends the exits would then be adequate, and requests the board to accept the same in lieu of complying with fire department Order No. 76948-LD and the decision of the superintendent of buildings.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 1 of the superintendent of building's order and Item No. 2 of the fire commissioner's order (being the same requirements), on condition that a fixed double rung iron ladder shall be provided from the top story stair hall to scuttle in roof; granted, as to Item No. 2 of the superintendent of building's order and Item No. 1 of fire commissioner's order, on condition that a gooseneck iron ladder shall be provided from the main roof to the roof of the extension at 2nd story, with egress therefrom by means of a balcony at roof level of 2nd story extension and 60 degree iron stair to the roof of the 1st story extension, with egress therefrom to adjoining properties across extension roof at the same level, and on further condition that the top story shall be unoccupied other than for non-hazardous storage, and that the occupancy of the 2nd story shall not exceed eight (8) persons.

544-25-S.

PETITIONER—Samuel Rosenblum, for Farragut Holding Co., owner.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—32 East 28th street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon	5
Negative	0
Absent	0

THE RESOLUTION:

(544-25-S)

WHEREAS, Samuel Rosenblum, for Farragut Holding Co., owner, filed, May 27, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in decision of superintendent of buildings, affecting premises 32 East 28th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, Alt. App. No. 947-1925, reads:

"2. Roof of 2 story extension must be fireproofed.

"3. Fireproof passageway from foot of fire escape to street must be provided."

and

WHEREAS, the building is non-fireproof, four stories in height, 20 ft. 10 in. by 98 ft. 9 in. in area at the 1st story and 20 ft. 10 in. by 44 ft. in area above. OCCUPIED: 1st story, stores; 2nd, 3rd and 4th stories, manufacturing, 30 persons on each story. EXITS: An interior wooden stairway extending from the 1st story to roof, enclosed in fire-resisting partitions with fireproof doors at openings; ROOFS of adjoining buildings are about the same height; and

WHEREAS, the petitioner proposes to provide a 45 degree fire escape on the rear of building extending from main roof to roof of 2nd story extension, thence to fireproof roof of adjoining one-story extension at west, to fire-retard the underside of 2nd story extension with 1/2 in. plaster boards and 26 gauge metal; and

WHEREAS, the petitioner claims the exits would then be adequate and, also, due to the small size of the building, he requests the board to accept the proposed means of exit in lieu of complying with the requirements of the decision of the superintendent of buildings.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 2, on condition that the ceiling of the 2nd story, beyond the wall of the main building, shall be fire-retarded in accordance with the rules of the board of standards and appeals; granted, as to Item No. 3, only so far as it affects the egress from the termination of the rear fire escape, on condition that a balcony fire escape on the rear of the 2nd story extension shall be connected to the adjoining premises, No. 30 East 28th street, with balcony fire escapes and stairs therefrom to the fireproof roof of extension at No. 30 East 28th street, with egress therefrom through plain glass windows direct to the street, and on condition that the fire escape shall comply with the requirements of the labor law in all other respects, and granted only so long as conditions as to use and occupancy otherwise remain substantially unchanged.

545-25-S.

PETITIONER—Samuel Rosenblum, for Dr. S. K. Johnson, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—120 West 25th street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon	5
Negative	0
Absent	0

THE RESOLUTION:

(545-25-S)

WHEREAS, Samuel Rosenblum, for Dr. S. K. Johnson, owner, filed, May 27, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 120 West 25th street, Manhattan; and

WHEREAS, the order of the fire commissioner reads:

"Order No. 76500-LD. 1. Enclose the interior stairway serving as a required means of exit in partitions of fire resisting material from floor of 1st story to the underside of 2nd story, including any exposed stair soffits, landings and passageways.

"Openings shall be provided with approved self-closing doors, as per rule 2 of Board of Standards and Appeals adopted July 29th, 1924."

and

WHEREAS, the building is non-fireproof, five stories in height, 25 ft. by 82 ft. 3 in. in area at the 1st story and 25 ft. by 65 ft. in area above. OCCUPIED: 1st story, restaurant; 2nd story, offices, 3 persons; 3rd story, hemstitching and pleating, 13 persons; 4th story, storage; 5th story, manufacturing of metal wreaths, 3 persons. EXITS: An interior wooden stairway extending from the 1st story to the roof. Open on the 3rd, 4th and 5th stories, enclosed

MINUTES

on the 1st story with wood studs and sheathing metal covered; on the 2nd story with wood studs, covered with stamped metal, with wooden sash doors at openings; a party wall balcony on the rear of the building at the 2nd, 3rd, 4th and 5th stories, connecting with building at west, having non-fireproof openings along the course thereof; ROOFS of adjoining buildings are about the same height; and

WHEREAS, the petitioner claims that the adjoining building at the west is connected by party wall balconies and is similar as to construction and exits; the two buildings are under one ownership; that the two upper stories are used by the tenants in the building adjoining at west, there being a horizontal exit between the buildings on the two stories protected by fire doors, and the occupancy is small; that the restaurant side of partition is protected with plate glass mirror, which it would be a hardship to remove.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the fire-retarding of the stairway, on condition that the stair hall side and the soffits of the stairway shall be fire-retarded in accordance with the rules of the board of standards and appeals; and that the 1st story store side of the partition where exposed shall be similarly fire-retarded, and granted so long as conditions as to use and occupancy otherwise remain unchanged, and that the requirements of the labor law shall be complied with in all other respects.

548-25-S.

PETITIONER—Rapid Cleaners & Dyers, Inc., lessee.
SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—312-314 East 125th street, Manhattan.

APPEARANCES—

For Petitioner: Harry Gittleson and Mr. Greenberg.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon	5
Negative	0
Absent	0

THE RESOLUTION:

(548-25-S)

WHEREAS, Rapid Cleaners & Dyers, Inc., lessees, filed, August 14, 1925, a petition, with the board of standards and appeals, for a variation from the requirements of the labor law, as cited in order of the fire commissioner, affecting premises 312-314 East 125th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, No. 74119-LD, dated March 20, 1925, reads:

"1. Provide safe and unobstructed egress from the lower termination of the fire escape at rear of building by constructing a fireproof passageway with an unobstructed width of at least 3 ft. throughout, leading to the street, adequately lighted at all times during working hours, or by means of providing access to an open area having communication with the street * * *";

and

WHEREAS, the premises consists of two attached non-fireproof buildings— No. 312 is three stories and basement in height, 19 ft. by 45 ft. in area; No. 314 is two stories in height, 18 ft. 6 in. by 45 ft. in area. OCCUPIED: No. 312, basement, washing and dyeing, 2 persons; 1st story, office, 1 person; 2nd story, examining and pressing room, 8 persons; 3rd story, pressing room, 5 persons; No. 314, 1st story, garage; 2nd story, sorting room, 1 person. EXITS: No. 312, an interior open wooden stairway, extending from

cellar to top story, iron ladder to roof scuttle.. No. 314, no interior stairs but a doorway opening in party wall from 2nd story to 1st story of No. 312; No. 312, a fire escape on the rear of the building, having fireproof openings along the course thereof, extending from the top story to the yard level, with no EGRESS from the termination of the same; a gooseneck ladder from roof of one-story metal extension to the roof; ROOFS of adjoining buildings—15 ft. higher at west, 25 ft. higher at east; and

WHEREAS, the petitioner claims that adequate egress may be had through a gate in the fence at rear, west side, to the yard of a tenement house; he has filed a letter of consent, signed by the owner of the said tenement to permit the use of his premises as an exit.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that a balcony fire escape shall be provided on the front of the building at the 3rd and 4th story, with 60 degree connecting stairs and drop ladder in guides from balcony at 3rd story to stoop level, and that the windows on the 3rd story balcony shall be made fireproof, and granted only so long as conditions as to occupancy and use remain substantially unchanged.

546-25-S.

PETITIONER—John J. Gilmartin, for Robert Hoe Estate.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—683-685 Broadway, Manhattan.

APPEARANCES—

For Petitioner: John J. Gilmartin.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.
CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon	5
Negative	0

THE RESOLUTION:

(546-25-S)

WHEREAS, John J. Gilmartin, for Robert Hoe Estate, owner, filed, May 27, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in decision of the superintendent of buildings and order of the fire commissioner, affecting premises 683-685 Broadway, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, dated May 6, 1925, reads:

"Answering your letter of May 2, 1925, with reference to Fire Department Order No. 61658-LD, we beg to state that the stairway leading to Broadway does not meet the requirements of the Labor Law, in that the area of wire glass on every story except the 1st, exceeds 720 sq. in. and the panes of wire glass exceed 360 sq. in.";

and the order of the fire commissioner, No. 61658-LD, dated June 26, 1924:

"Reduce the area of wire glass in stairway enclosure, each story, northeast side of building, to not more than 720 square inches * * *";

and

WHEREAS, the building is fireproof, 12 stories in height, 50 ft. by 90 ft. in area; OCCUPIED as a factory building, about 10 persons on each story; equipped with a sprinkler system. EXITS: Two interior fireproof stairways, extending from the 1st story to the top story, enclosed in fireproof partitions with fireproof doors at the openings, and iron winding stairs to roof from northeast stair-hall, an iron ladder to roof scuttle from southwest stair-hall; a sub-standard fire escape on the 3rd street front; and

MINUTES

WHEREAS, the petitioner claims the amount of wire glass in the stairhall enclosure on each story above the 1st story is 120 sq. ft.; that the maximum size light on each of said stories is 2 ft. by 4 ft., and that the occupancy is small with adequate exit facilities.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted on condition* that additional wire glass panels shall be provided in all openings embraced in this order, with an air space of not less than 1½ in. between the glass, secured with kalamein glass beads; *granted on further condition* that the wire glass panels shall be removed from the doors leading to the stairhall and kalamein panels substituted; *granted* only so long as conditions as to occupancy and use otherwise remain unchanged.

THE RESOLUTION:

(604-25-S)

WHEREAS, Albert B. Ashforth, Inc., for Estate of William Post, owner, filed, June 11, 1925, a petition, with the board of standards and appeals, for a variation from the requirements of the labor law, as cited in order of the fire commissioner, affecting premises 61 Fulton street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated May 12, 1925, reads:

"1. Arrange fire escapes on rear of building and the opening leading thereto and the windows opening on the course thereof * * *.

"NOTE: Among the defects noted on this fire escape are the following:

"Windows on course not fireproof nor self-closing; no stairway from the lowest balcony to ground; no safe passageway to the street from the termination; iron shutters on openings obstruct passageway.

"2. Provide suitable means of reaching the roof, as per resolution of the Board of Appeals adopted April 10th, 1917. This resolution provides that the requirements for extension of stairways to the roof will be waived in cases where no safe egress can be had from the roof to the adjoining building, but further required that there shall be a fixed iron ladder through scuttle to the roof, a gooseneck ladder from an outside stairway or fire escape, or other suitable means of reaching the roof."

and

WHEREAS, the building is brick and frame, four stories in height, 24 ft. by 73 ft. in area at 1st story and 24 ft. by 58 ft. in area above. OCCUPIED: 1st story, store; 2nd story, printing, 5 persons; 3rd story, repair work, 6 persons; 4th story, repairing cameras, 4 persons. EXITS: An interior wooden stairway, extending from the 1st story to top story, enclosed in wood lath and plaster partitions with wooden, glass-paneled doors at openings; a fire escape on

the rear of the building, having non-fireproof openings with iron shutters along the course thereof, extending from 4th story balcony to the roof of the one-story extension; with EGRESS from the termination of the fire escape by means of ladder to yard; ROOFS of adjoining buildings are same height and having peaked roofs, similar to building in question; and

WHEREAS, petitioner contends that egress from the extension roof may be had by means of the adjoining extension roofs to the east and to the west.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, as to Item No. 1, *on condition* that iron stairs of not less than 60 degrees shall be provided from the highest to the lowest balcony of the fire escape; with 45 degree fixed iron stairs from the roof of extension to the yard, and that egress shall be provided from the roof of the extension over the extension roofs of three (3) premises to the east and west to be maintained open and accessible, and that all openings on the course of the fire escape shall be made fireproof; granted, as to Item No. 2, *on condition* that a scuttle shall be provided in the roof, with iron ladder thereto from the top story, and *granted* only so long as conditions as to occupancy and use otherwise remain unchanged.

THE RESOLUTION:

(632-25-S)

WHEREAS, Louis Rosenhein, lessee, filed a petition, June 18, 1925, with the board of standards and appeals, for a variation from the requirements of the labor law, as cited in order of fire commissioner, affecting premises 240-46 West 35th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated May 19, 1925, reads:

"1. Remove all partitions not built of incombustible materials as per Sections 263 and 270 of the Labor Law."

and

WHEREAS, the building is fireproof, 16 stories in height, 88 ft. by 100 ft. in area; OCCUPIED as a factory building, 30 persons on each story; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Two interior fireproof stairways, extending from the 1st story to roof, enclosed in fireproof partitions with fireproof doors at openings; and

WHEREAS, the petitioner claims he occupies the rear half of 6th story; that the dwarf wood partitions are 3 to 4 ft. below the ceiling, permitting the proper operation of the sprinkler heads; that the said partitions are used only to enclose a small showroom and office.

Resolved, that the order of the fire commissioner be and it hereby is *affirmed*, and the petition be and it hereby is *denied*.

THE RESOLUTION:

(633-25-S)

WHEREAS, George Provot, for Jules Weber, owner, filed, June 18, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 523-527 West 42nd street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered June 8, 1925, reads:

"16. All windows should be fireproof, having panes of plate or wire glass not over 720 square inches in area, to conform with the requirements of Section 264, Labor Law."

and

WHEREAS, the building is fireproof, six stories in height, 75 ft. by 100 ft. 5 in. in area at 1st story and 75 ft. by 90 ft. 5 in. in area above. OCCUPIED: 1st to 4th story, storage, 12 persons on each story; 5th story, manufacturing, 230 persons; 6th story, office, 60 persons. EXITS: Two interior fireproof stairways, extending from the 1st story to roof, enclosed in fireproof partitions with fireproof doors at openings; and

WHEREAS, the petitioner proposes to use $\frac{1}{4}$ in. plate glass in front windows, the maximum light of glass on 2nd story to be 30 by 34 in., the maximum light on 6th story to be 22 by 34 in.; and

WHEREAS, the petitioner claims that all other windows will be constructed according to law; that the building is entirely fireproof; that no other part of the building will be used for factory purposes except the 5th story.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the 2nd story windows on the front of the building, on condition that they shall be glazed with polished plate glass, not less than $\frac{1}{4}$ in. in thickness, set in metal frames and sash, and granted, as to the 6th story, only so far as it affects the size of the glass, and granted on condition that the requirements of the labor law shall be complied with in all other respects.

637-25-S.

PETITIONER—Charles H. Richter, for Estate of Anna E. Tucker, owner; Frederick J. Lancaster, trustee.

THE RESOLUTION:

(637-25-S)

WHEREAS, Charles H. Richter, for Estate of Anna E. Tucker, owner (Frederick Lancaster, trustee), filed, June

18, 1925, a petition, with the board of standards and appeals, for a variation from the requirements of the labor law, as cited in decision of the superintendent of buildings, rendered June 5, 1925, affecting premises 25-27 West 3rd street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings reads:

"Provide fireproof passage from the foot of stairs to street."

and

WHEREAS, the building is non-fireproof, four stories in height, 33 ft. 4 in. by 50 ft. in area at 1st story and 33 ft. 4 in. by 40 ft. in area above. OCCUPIED as a factory building, 20 persons on each story. EXITS: Two (2) interior wooden stairways extending from the 1st story to top story, enclosed in non-fireproof partitions with wooden doors at openings; a standard fire escape on the front; a fire escape on the rear of the building, having fireproof openings along the course thereof, extending from main roof to the 2nd story balcony, with EGRESS from the termination of the fire escape by means of 2nd story balcony extended, stairs up to roof of an adjoining 2nd story extension at east, thence by stairs to yard level of said adjoining building; ROOFS of adjoining buildings—same level at west, 10 ft. higher at east; and

WHEREAS, the petitioner proposes to provide an additional means of exit from foot of rear fire escapes by further extending the 2nd story balcony to a balcony on the same level at rear of building adjoining at north; and

WHEREAS, the petitioner claims the building adjoining at east is under the same ownership.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects egress from termination of fire escape at 2nd story level, on condition that the entire skylight of 1st story extension shall be glazed with wire glass and that the fire escape shall be extended by an iron bridge balcony on the 2nd story to the two houses to the rear, with a 45 degree stairway from the extension bridge to the yard through the Greene street property, all in the one single ownership; that the balcony and bridge shall be provided with flame sheet, under said bridge and lower balcony, and extending up the side not less than 18 in.; and granted only so long as the property shall remain in single ownership.

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(660-25-S)

WHEREAS, William F. Doyle, for Shroder & Koppel, Inc., owner, filed, June 25, 1925, a petition, with the board of standards and appeals, for a variation from the requirements of the labor law, as cited in decision of the superintendent of buildings, affecting premises 59-61 West 39th street and 680-688 Sixth avenue, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered June 4, 1925, reads:

"11. * * * Windows must conform to Section 264 of the Labor Law.";

and

WHEREAS, the building is fireproof, 23 stories in height, having a frontage of 100 ft. on West 39th street and a frontage of 99 ft. on Sixth avenue. OCCUPIED: 1st story, stores; upper stories, lofts and offices; EQUIPPED with a sprinkler system. EXITS: Two interior fireproof stairways, extending from 1st story to the roof, enclosed in fireproof partitions with fire doors at the openings; and

WHEREAS, there are windows on the 1st, 2nd and 3rd stories in the walls of the 38th street, 39th street and Sixth avenue fronts of the building, glazed with plate glass, the area of glass being in excess of the limitations prescribed by the labor law; and

WHEREAS, petitioner proposes to eliminate the self-closing devices on all windows which are not within 30 ft. from any opening in another building and also where they are not within 50 ft. above a neighboring roof; and re the area of the glass, contends that a strict compliance with the labor law as to the area of the glass would affect the architectural appearance of the building and also would destroy the intended use of the lowest three stories.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects omission of self-closing device on the windows below the 12th story, inclusive, and on windows other than within 30 ft. horizontally and 50 ft. vertically of any other exposure or on the course of any fire escape, and *granted*, so far as it affects the requirement as to area of glass in the windows at street front on the three lower

stories, *on condition* that all openings shall be equipped with approved metal frames and sash, glazed with polished plate glass not less than $\frac{1}{4}$ in. in thickness; that the building shall be equipped with a two-source sprinkler system and an approved standpipe system; and that the requirements of the labor law shall be complied with in all other respects.

668-25-S.

PETITIONER—Richard Shutkind, for Edwin C. Han, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—61 West 27th street, Manhattan.

APPEARANCES—

For Petitioner: Richard Shutkind.

For Administration: Inspector Maher of fire department.

THE RESOLUTION:

(668-25-S)

WHEREAS, Richard Shutkind, for Edwin C. Han, owner, filed, June 29, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 61 West 27th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated June 9, 1925, reads (Order No. 79657-LD):

"1. Arrange the fire escapes on the east side of building, and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Section 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals or carry out a proper alternative method of complying with the requirements of Sec. 271 of Labor Law * * *.

"1. No fireproof passageway from termination to street.

"2. No balcony on 2nd story.";

and

WHEREAS, the building is non-fireproof, four stories in height, 24 ft. 8 in. by 68 ft. in area at 1st story and 24 ft. 8 in. by 50 ft. in area above. OCCUPIED: 1st story, restaurant, 20 persons; upper stories, tenant factory, 19 persons above the 1st story. EXITS: An interior wooden stairway, extending from the 1st story to top story, enclosed in wood lath and plaster partitions with wooden doors at openings; a fire escape balcony at the 3rd and 4th stories, taking in one window on the rear of building, connecting with the fire escape on the premises to the north; ROOF of adjoining building is 15 ft. higher; and

WHEREAS, petitioner proposes to erect a fire escape balcony with flame plate on the 2nd story; to extend same over the extension roof to a platform at street front and to provide thereon a drop ladder in guides to street; and proposes, further, to provide a 60 degree ladder from the proposed balcony to the existing 2nd story balcony.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the installation of a counterbalanced stairs from the proposed 2nd story balcony, *on condition* that the fire escape as proposed shall be installed with a balcony at 2nd story, embracing all openings on the 2nd story rear, with a balcony extending to the street front with counterbalanced drop ladder in guides to 27th street; that the underside of the lowest balcony shall be equipped with flame plates; and that the fire escapes shall conform to the requirements of the labor law in all other respects.

THE RESOLUTION:

(670-25-S)

WHEREAS, Samuel Cohen, for Chas. A. Platt and Emory Crowley, owners, filed, June 29, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 282-84-86 Seventh avenue, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered June 25, 1925, reads:

"11. 'Front windows on 1st and 2nd floors should comply with Rule 503 of the Industrial Code and Section 264 of the Labor Law.' Reconsideration denied."

and

WHEREAS, the building is fireproof, nine stories and pent house in height, 69 ft. by 88 ft. in area; OCCUPIED as stores, show rooms and factory, 60 persons on each story above the 1st story; EQUIPPED with a sprinkler system; and

WHEREAS, there are openings in the Seventh avenue and also the 26th street front walls of the building, on the 1st and 2nd stories, glazed with $\frac{1}{4}$ in. plate glass in metal frames; the maximum area of the glass on the 1st story being 8 ft. by 9 ft. 6 in., and on the 2nd story being 5 ft. by 7 ft.; and

WHEREAS, petitioner contends that a strict compliance with the labor law as to the area of the glass would materially affect the architectural treatment of the building, and also the intended use of the lower two stories.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the windows on the street front of the first two stories, on condition that all openings shall be equipped with metal frames and sash, glazed with polished plate glass, not less than $\frac{1}{4}$ in. in thickness, and that the requirements of the labor law shall be complied with in all other respects.

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(634-25-S)

WHEREAS, Samuel Rosenblum, for Hanover Lunch, Inc.,

lessee, filed, June 18, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner and a decision of the superintendent of buildings, affecting premises 125-7 West 31st street and 126-8 West 32nd street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 27, 1925, and the decision of the superintendent of buildings, dated June 4, 1925, read, respectively, as follows:

"Order No. 76151-LD—

"1. Provide a second means of exit from 2 story building at second story."

"Inspection of the above premises shows that before a Certificate of Occupancy can be issued—second means of exit provided in accordance with Section 271 of Labor Law from 2nd floor of 2 story portion of building.";

and

WHEREAS, the building on 1st story extends through the block from street to street, is non-fireproof, 2 and 3 stories in height, the two-story portion on 31st street being 50 ft. by 98 ft. 9 in. in area. OCCUPIED: 1st story, bakery, restaurant and two-car non-storage garage; 2nd story, offices, storage bakery, 15 persons. EXITS: An interior wooden stairway, extending from the 1st story to roof, enclosed in fire-resisting partitions with wooden sash doors at openings; ROOFS of adjoining buildings 14 stories higher at east, 4 stories higher at west; and

WHEREAS, the petitioner proposes to provide an exit door at rear of 2nd story to the roof of 1st story extension where an existing iron stairway leads from such roof to fire escapes at rear of No. 130 West 32nd street.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the egress from the termination of the fire escape on the two-story section of the premises, on condition that a casement door shall be provided from the 2nd story to the roof of the 1st story extension, with egress therefrom to a fire escape on the adjoining premises, and granted only so long as conditions as to occupancy and use remain substantially unchanged and that the labor law requirements shall be complied with in all other respects.

WHEREAS, Samuel Rosenblum, for Stuart H. Patterson, owner, filed, June 18, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 797-9 Greenwich street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated May 15, 1925, reads (Order No. 77468-LD:

"2. Extend the interior stairway at the Greenwich Street side of building to the roof, as per Section 271

MINUTES

of the Labor Law, said extension and the landings and passageways connecting therewith to be enclosed on all sides with partitions of fire resisting material extending at least 3 ft. above the roof, as per Section 271 and 272 of the Labor Law and Rule 2 of the Industrial Code.

"3. Provide safe and unobstructed egress from the lower termination of the fire escape at rear of building by constructing a fireproof passageway with an unobstructed width of at least 3 feet throughout, leading to the street, adequately lighted at all times during working hours, or by means of providing access to an open area having communication with the street, as per Section 273 of the Labor Law."

and

WHEREAS, the building is non-fireproof, six stories in height, 74 ft. 7 in. by 74 ft. 6 in., and 22 ft., irregular, in area. OCCUPIED: 1st story, stores; 2nd story, manufacturing extracts, 2 persons; 3rd story, manufacturing radio parts, shipping, 19 persons; 4th story, bindery, 7 persons; 5th story, welding, 6 persons; 6th story, cutters, 10 persons. EXITS: An interior wooden stairway, extending from the 1st story to top story, enclosed in fire-retarding partitions with fireproof doors at openings; an iron ladder from top story loft to roof scuttle; a standard fire escape on Greenwich street front; a fire escape on the rear of the building, having fireproof openings along the course thereof, extending from main roof to yard level; with EGRESS from the termination of the fire escape by means of exit door in fence to yard of No. 323 West 13th street; ROOFS of adjoining buildings at same level at west, three stories lower at east; the building being equipped with a sprinkler system; and

WHEREAS, the petitioner claims the egress from foot of rear fire escapes is adequate, as there is an exit door in fence at east; that there is an iron ladder from the top story to roof scuttle, and that the rear fire escapes extend to the roof.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, as to Item No. 3, only so far as it affects egress from the termination of the fire escape, *on condition* that a door, unfastened, shall be provided at the termination of the rear fire escape stairs to yard of adjoining premises to the east, with egress therefrom to the premises to the east and south; and *denied* as to Item No. 2.

(703-25-S)

WHEREAS, Croker National Fire Prevention Engineering Company, for Kielkap Realty Corporation, owner, filed, July 3, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 40-42 West 17th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 19, 1925, reads (Order No. 34590-LD):

"1. Arrange the exterior screened stairway on the rear of building and the openings leading thereto so that same are in compliance with the provisions of Section 268 of the Labor Law or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law. SEE NOTE.

"NOTE:: Among the defects noted on this stairway are the following:

"Treads of stairs not 10 in. wide.";

and

WHEREAS, the building is fireproof, 12 stories in height, 50 ft. by 92 ft. in area at 1st story and 50 ft. by 82 ft. in area above; OCCUPIED as a tenant factory, mostly suits and dresses, 400 persons above the 1st story; EQUIPPED with a fire alarm signal system and a standpipe system. EXITS: An interior fireproof stairway, extending from the 1st story to roof, enclosed in fireproof partitions with fire doors at openings; an exterior screened stairway on the rear of the building, having fireproof openings along the course thereof, extending from the roof to the yard; with EGRESS from the termination of the fire escape by means of a fireproof passageway to the street; ROOFS of adjoining buildings are seven and eight stories lower; and

WHEREAS, petitioner contends that the exterior screened stairway, with 9 in. instead of the required 10 in. treads, was erected in 1910 from approved plans and was accepted at that time by all departments having jurisdiction.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the treads of the screened stairway, *on condition* that such treads shall be not less than 9 in. and that the stairway shall comply with the labor law in all other respects.

THE RESOLUTION:

(718-25-S)

WHEREAS, Henry I. Oser, for Millinery Center Building Corp, lessee, filed, July 7, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in decision of the superintendent of buildings, affecting premises 521-527 Seventh avenue, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, No. N. B. 606-1924, reads:

"3. Exterior openings at 1st, 2nd and 3rd stories should comply with section 264 of Labor Law and rule 503 of Industrial Code.";

and

WHEREAS, the building, facing on two (2) street fronts, is fireproof, 22 stories in height, 99 ft. by 200 ft. in area; OCCUPIED as stores, show rooms and 25 per cent manufacturing, 250 persons per story; and

WHEREAS, there are openings on the 1st, 2nd and 3rd stories in the Seventh avenue front wall and also in the 38th street front wall of the premises, glazed with plate glass; the maximum area of the glass on the Seventh avenue front being: 1st story, 90 in. by 120 in.; 2nd story, 92

MINUTES

in. by 92 in.; 3rd story, 39 in. by 54 in.; and on the 38th street front: 1st story, 120 in. by 136 in.; 2nd story, 92 in. by 136 in.; 3rd story, 39 in. by 54 in.; and

WHEREAS, petitioner contends that a strict compliance with the labor law as to the area of the glass would destroy the intended use of the three lower stories and also would interfere with the architectural effect of the building.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the windows in the street front of the three (3) lower stories, *on condition* that all openings shall be equipped with approved metal frames and sash, glazed with polished plate glass not less than $\frac{1}{4}$ in. in thickness, and that the requirements of the labor law shall be complied with in all other respects.

THE RESOLUTION:

(719-25-S)

WHEREAS, Eugene B. Sullivan, for Printcraft Press, Inc., lessee, filed, July 9, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in order of the fire commissioner, affecting premises 260-262 West 41st street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 68520-LD, reads:

"1. Remove all partitions not built of incombustible material as per sections 267 and 270 of the labor law."; and

WHEREAS, the building is fireproof, eight stories in height, 50 ft. by 98 ft. 9 in. in area at the 1st story and 50 ft. by 87 ft. in area above; OCCUPIED as a tenant factory, mostly printing, 90 persons above the 1st story, the petitioner occupying the 4th story as a printing establishment, 15 persons; EQUIPPED with a fire alarm signal system. EXITS: Two interior fireproof stairways, extending from the 1st story to the roof, enclosed in fireproof partitions with fire doors at the openings; ROOFS of adjoining buildings are five stories lower; and

WHEREAS, petitioner contends that the partitions in question, hardwood and glass, extending to the ceiling, enclose only the office and reception space and that the actual working space used for printing is open and unencumbered by any partitions.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the partitions located at the front of the building, enclosing the executive offices, *on condition* that the upper portions of the said partition shall be glazed with thin glass for a distance of not less than 18 in. below the ceiling; that exits shall lead from the factory portion direct to the street, hall or exits in all cases; that all openings to stair halls and exits shall be equipped with standard self-closing fireproof doors, and that red lights shall be placed over all exits; and *granted* only so long as the entire floor remains in single occupancy.

THE RESOLUTION:

(444-25-S)

WHEREAS, John Freid, for 27-35 West 24th Street Corporation, owner, filed, April 24, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 27-35 West 24th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 2, 1925, reads (Viol. Order No. 75103-LD):

"1. Remove combustible material from stairway enclosure at east and west side of building on 1st story, as per Rule 5 of the Board of Standards and Appeals, adopted July 29th, 1924. Note: Lunch stand on west side. Cigar stand on east side."; and

WHEREAS, the building is fireproof, 11 stories in height, 100 ft. by 90 ft. in area at 1st story and 100 ft. by 85 ft. in area above; OCCUPIED as a factory building, about 41 persons to each story; also maintaining a lunch stand in stair enclosure at west side, a cigar stand in stair enclosure at east side on 1st story near the street entrance; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Three interior fireproof stairways, extending from the 1st story to roof, enclosed in fireproof partitions with fireproof doors at openings; a sub-standard fire escape on the rear of the building, having fireproof openings along the course thereof, extending from roof to the yard level; no EGRESS from the termination of the fire escape to street; ROOFS of adjoining buildings six stories lower at west, seven stories lower at east; and

WHEREAS, the petitioner claims the premises are kept free from accumulations; that there is adequate fire protection provided; he further contends there is no fire hazard, and requests that the order be vacated and that the occupancy be permitted to be maintained as at present without change.

Resolved, that the order of the fire commissioner be and it hereby is *affirmed*, and the petition be and it hereby is *denied*.

THE RESOLUTION:

(380-25-S)

WHEREAS, Croker National Fire Prevention Engineering Co., for Manhattan Bed Co., owner, filed, April 8, 1925, a petition for variation from the requirements of the labor law, as cited in order of the fire commissioner, affecting premises 125 Nostrand avenue, Brooklyn; and

WHEREAS, the order of the fire commissioner reads:

"Order No. 71133-LD—

"1. Enclose the interior stairway at south side of building serving as a required means of exit, and the landings, platforms and passageways connecting therewith on all sides with partitions of fire-resisting material extending from cellar to bulkhead on the roof. * * *.

"2. Arrange the fire escape at the rear of building and the openings leading thereto and the windows opening on the course thereof * * *.

"Among the defects noted are the following: No fireproof passageway from termination to street.

"3. Provide an additional means of exit from the cellar, said exit to be located at the front of building; in accordance with the provisions of Section 271 of Labor Law.";

and

WHEREAS, the building is non-fireproof, three stories and cellar in height, 22 ft. 10 in. by 85 ft. in area. OCCUPIED: cellar, storage and punching angle irons, 1 person; the rest of the premises for the storage and manufacture of metal beds, 16 persons employed in the entire building. EXITS: An interior non-fireproof stairway extending from the cellar to roof, enclosed in partitions, covered both sides with ½ in. plaster board and 26 gauge metal, with wooden doors at the openings; a fire escape on the rear of the building, having fireproof openings along the course thereof, extending from the roof to the 1st story balcony, with counter-balanced stairs to yard, with egress from termination of fire escape by means of adjoining yards leading to Myrtle avenue; and ROOFS of adjoining buildings to the north one story lower, to the south same level; and

WHEREAS, petitioner contends that only one person is employed in the cellar, and proposes to provide a cement stairway at the front of the cellar, leading directly to the street, and requests, in view of the light occupancy of the premises, the acceptance of the existing means of egress.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 1, on condition that the partitions enclosing the stairway shall be covered with ½ in. plaster board and metal; any openings therein to be provided with self-closing fireproof doors; granted, as to Item No. 2, only so far as it affects the egress from the termination of the fire escape, on condition that a gate shall be provided to the yard of the premises directly to the south and east, with egress therefrom through the houses at the 1st story level to Myrtle avenue; granted, as to Item No. 3, on condition that permanent steps be provided from the cellar to sidewalk with hinged doors at the sidewalk level; granted only so long as conditions as to occupancy and use remain substantially unchanged.

62-25-S.

PETITIONER—Isaac Menline, for Lane Bryant, Inc., and Estate of Albert Malsin, lessees.

SUBJECT—Variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—24-30 West 39th street, Manhattan.

APPEARANCES—

For Petitioner: Isaac Menline.

ACTION OF BOARD—Petition denied.

THE VOTE TO GRANT—

Affirmative: Commissioners Flanagan and Guilfoyle and Fire Chief Kenlon..... 3
Negative: Chairman Walsh and Commissioner Connell 2

THE RESOLUTION:

(62-25-S)

WHEREAS, Isaac Menline, for Lane Bryant, Inc., lessee, filed, January 15, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 24-30 West 39th street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, dated December 18, 1924, reads:

"2. Stair enclosure of No. 24 should be fire retarded from the cellar to the roof.";

and

WHEREAS, the building is non-fireproof, five stories and basement in height, 88 ft. by 98 ft. 9 in. in area at 1st story and 88 ft. by 87 ft. 3 in. in area above. OCCUPIED: Basement and 1st story, stores and storage; 2nd to 5th stories (inclusive), offices and factories, 60 persons on each story; EQUIPPED with fire alarm signal system. EXITS: Two interior non-fireproof stairways, extending from the 1st story to roof, the westerly stairway enclosed in fire-resisting partitions with fire doors at openings; the easterly stairway enclosed in non-fireproof partitions with wooden doors at openings; two fire escapes on the rear of the building, having fireproof openings along the course of westerly stack; non-fireproof openings along the course of easterly stack, extending from main roof to the roof of 1st story extension, with EGRESS from the termination of the fire escape by means of a connection to and through fireproof building, Nos. 21 and 23 W. 38th street; ROOFS of adjoining buildings same height at east, nine (9) stories higher at west; and

WHEREAS, the petitioner claims the decision of the superintendent of buildings, requiring the easterly stairway to be made fire-resisting from cellar to roof, was based on section 2, subdivision 10 (definition of a factory building); that the easterly section of the building has only 12 persons at factory work on the 2nd story and is separated from the westerly section by an unpierced brick wall from the 1st story ceiling to the roof; that the westerly section is used for factory purposes and provided with a fire-resisting enclosure; that the spirit of the labor law is not violated, and requests the board to relieve him of the requirement of fire-retarding the easterly stairway which leads to the non-factory section of the building.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the petition be and it hereby is denied.

THE RESOLUTION:

(592-25-S)

WHEREAS, Westinghouse Electric and Manufacturing Company, for Crystal Spring Water Company, owner, filed, June 10, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 461-467 Tenth avenue, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 29, 1925, reads:

"1. Arrange bars on windows on first story 36th Street side of building, so as to be readily movable or removable from both sides in such a manner as to afford the free and unobstructed use of such windows for purposes of egress, as per Section 272 of the Labor Law.";

and

WHEREAS, the building is fireproof, six stories in height, 74 ft. by 100 ft. in area; OCCUPIED as a factory building; on an average of 30 persons on each story; EQUIPPED with a fire alarm signal system. EXITS: Two interior fireproof stairways extending from the 1st story to roof, enclosed in fireproof partitions with fire doors at openings; all windows on the 1st story of 36th street front are provided with fixed iron bars; and

WHEREAS, the petitioner claims there are eleven windows which are barred as a protection against burglary; that the building contains radio sets and electrical equipment to great value; that the exits are adequate, not considering these barred windows, and requests the board to permit the windows to remain barred for safety, and that Order No. 76240-LD be rescinded.

Resolved, that the order of the fire commissioner be and it hereby is affirmed, and the petition be and it hereby is denied.

THE RESOLUTION:

(614-25-S)

WHEREAS, Miller & Sacks, owner, filed, June 13, 1925, a petition, with the board of standards and appeals, for a variation of the requirements of the labor law, as cited in order of the fire commissioner, affecting premises 909-919 Faile street and 1166 Garrison avenue, Borough of The Bronx; and

WHEREAS, the order of the fire commissioner, dated June 13, 1925, reads:

"1. Remove the substandard fire escape on the west side of the building or reconstruct same as per Section 274 of the Labor Law and Rule 3, Board of Standards and Appeals, adopted May 9th, 1924. Among the defects noted are the following:

"1. Windows on course not fireproof, self-closing. NOTE: No sign of any character shall be placed at opening leading to this fire escape.";

and

WHEREAS, the building is non-fireproof, four stories in height, 144 ft. 6 in. by 50 ft. in area. OCCUPIED: 1st story, store; 2nd story, machine shop, 4 persons; 3rd and 4th stories, drapery trimmings, 16 persons. EXITS: An interior wooden stairway, extending from the 1st story to top story, enclosed in wooden partitions with wooden doors at openings; a sub-standard fire escape on the Garrison avenue front and a fire escape on the Faile street front of the building, having fireproof openings along the course thereof, extending from the top story to the 1st story balcony, with EGRESS from the termination of the fire escape by means of counterbalanced stairway to street; ROOFS of adjoining buildings are 10 ft. higher; and

WHEREAS, petitioner contends, in view of the low height of the building and the low occupancy, that the existing means of egress are adequate, and that it would be a hardship to remove the fire escape in question.

Resolved, that the order of the fire commissioner be and it hereby is affirmed, and the petition be and it hereby is denied.

WHEREAS, Frank A. Carr, owner, filed, February 11, 1922, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 277-279 Morris avenue, The Bronx; and

WHEREAS, the order of the fire commissioner, No. 30264-LD, reads:

"1. Extend the interior stairway at the north side of building from the 4th to the 6th story as per Sec. 271 of the Labor Law. * * *";

and Order No. 28525-LD, dated November 14, 1921, reads:

"1. Enclose the interior stairway at west side of building serving as a required means of exit and the landing platforms and passageways connected therewith on all sides with partitions of approved fire-resisting material * * *";

and

WHEREAS, the building is non-fireproof, six stories in height, 50 ft. by 38 ft. in area. OCCUPIED: 1st story, mineral waters; 2nd story, piano felt, 10 persons; 3rd story, piano felt, 6 persons; 4th story, piano felt, 6 persons; 5th story, storeroom; 6th story, vacant; the building being equipped with a sprinkler system and a fire alarm signal system, the means of egress consisting of an interior stairway extending from the 1st story to the 4th story, enclosed in fireproof partitions with fire doors at the openings; an interior stairway extending from the 2nd story to the 6th story, unenclosed; the roof of the adjoining building being on the same level as the 3rd story; and

WHEREAS, petitioner contends that there is no safe egress from the roof and that the building is of small area; and

MINUTES

WHEREAS, the board deemed that the action of the board of review of the fire department, dated June 3, 1920, should be ratified; and

WHEREAS, this action of the board of review of the fire department included action of Order No. 28525-LD, a copy of which order was not included in the printed resolution of the board adopted April 25, 1922, and the board deemed that Order No. 28525-LD should be included.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition, as to Orders Nos. 30264-LD and 28525-LD, be and it hereby is *granted on condition* that the recommendations stipulated in said action of the board of review of the fire department be complied with.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND TO MODIFY RESOLUTION.

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon	5
Negative	0
Absent	0

THE RESOLUTION:

(548-19-S)

WHEREAS, Frank J. Schefcik, architect, on behalf of Estate of Margaretta Metzger, owner, filed, July 18, 1919, a petition, with the board of standards and appeals, for variation of the requirements of section 79-b, labor law, as cited in orders of the fire commissioner, affecting premises 238-244 Sixth avenue, Manhattan; and

WHEREAS, the orders of the fire commissioner, No. 73148-LD, affecting premises 242-244 Sixth avenue, and No. 73151-LD, affecting premises 238-240 Sixth avenue, dated January 16, 1919, read:

"Item 1. (No copy of order filed, but apparently requires enclosing interior stairway in fire-resisting partitions.)

"Item 2. (Apparently requires the guard rails around the well holes in the balconies and a flame plate under the second story balcony.)";

and

WHEREAS, the building is of non-fireproof construction, five stories (63 ft.) in height, 39 ft. 5 in. by 70 ft. in area; OCCUPIED as a tenant factory, with not more than 15 occupants in each story; having one interior stairway, enclosed in fireproof partitions, except that the hall partitions in the 1st story are not covered on the store side with fire-resisting material and the partition separating the 1st floor hallway from the stairs to the cellar is not fire-resisting; having one exterior fire escape on the rear of each building, with egress through the yards of adjoining buildings, complying with the requirements of law, except that the 1st floor windows on the course of the fire escape are not fireproof and there is no flame plate under the 2nd story balcony; and

WHEREAS, this petition was granted by the board at its meeting July 22, 1919, on certain conditions, and it appears that these conditions conflict with the conditions imposed by the board in acting on Cal. No. 1017-18-S and Cal. No. 549-19-S and the representative of the owner requests a reopening of the case so that the conditions as to occupancy

should be uniform, and the board deemed that the conditions as to occupancy applied to Cal. No. 1017-18-S, 548-19-S and 549-19-S, affecting premises comprising buildings 238-244 Sixth avenue as stipulated in resolution adopted by the board March 10, 1925, in acting on Cal. No. 549-19-S.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted on condition* that the occupancy shall not exceed 30 persons per story in each building and that an open circuit fire alarm signal system be installed on the upper stories of the building with a station in each stair landing as stipulated in resolution adopted under Cal. No. 549-19-S.

THE RESOLUTION:

(698-25-A)

WHEREAS, J. B. Snook Sons, for Estate of Charles F. Hoffman, Inc., owner, filed, July 3, 1925, an appeal, from an order of the fire commissioner, affecting premises 453-455 Broome street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 79435-F, reads:

"1. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per sq. in. extending from cellar to roof, with necessary check valves and 2½ in. regulation Fire Department outlets on each story (including basements, cellars and roofs) placed within main stairway enclosure * * *";

and

WHEREAS, the building is non-fireproof, six stories (88 ft. 10 in.) in height, 50 ft. by 95 ft. 6 in. (4,775 sq. ft.) in area. OCCUPIED: 1st story, store; 2nd story, office and manufacturing, 20 persons; 3rd story, manufacturing, 30 persons; 4th story, manufacturing, 40 persons; 5th story, manufacturing, 12 persons; 6th story, manufacturing, 15 persons. EXITS: An interior wooden stairway extending from the 1st story to the roof, enclosed in fire-retarding partitions, with fireproof doors at openings; a fire escape on the Mercer street front of the building, having fireproof openings along the course thereof, extending from the street to the roof; and

WHEREAS, the appellant claims the building is equipped with a fire alarm system and a sprinkler system.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that a one-source sprinkler system shall be maintained with central office connection; and *granted* so long as conditions as to occupancy and use remain substantially unchanged.

THE RESOLUTION:

(714-25-A)

WHEREAS, Samuel Rosenblum, for Anna Ettner, owner, filed, October 15, 1925, an appeal, from an order of the fire commissioner, affecting premises 319-21 Bedford avenue, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner reads (Order No. 61577-F):

"1. Provide a separate and distinct system of *AUTOMATIC SPRINKLERS* throughout building, having at least one source of water supply, etc.";

and

WHEREAS, the building is non-fireproof, four stories in height, 38 ft. by 75 ft. in area. OCCUPIED: Manufacture of willow furniture, 3 persons on each story. EXITS: An interior wooden stairway extending from 1st story to top story, partly enclosed along the string of stairs with board partitions; a standard fire escape on the front of the building; a sub-standard fire escape on the rear of the building, not considered as an exit; and

WHEREAS, the appellant claims that all rear exposure

windows above 1st story are protected with iron shutters; that the greater part of willow materials are stored in the cellar and 1st story; there is not more than one ton on a floor; there are water buckets kept on all floors; he requests the board to accept the installation of a fire alarm system in lieu of the sprinkler system required by fire department Order No. 61577-F.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the structure shall be equipped with a wet sprinkler system, supplied direct from the city main; and that said system shall be maintained at a pressure of not less than 15 lbs. at highest line of sprinklers.

THE RESOLUTION:

(181-25-A)

WHEREAS, Flintrock Realty Co. (William P. Bannister), owners, filed, April 13, 1925, an appeal from orders of the fire commissioner, affecting premises 9-11-13 Maiden lane, Manhattan; and

WHEREAS, the orders of the fire commissioner read:

Order No. 68726-LF, dated November 26, 1924—

"2. Replace missing hose at outlets of standpipe on 1st story and balcony floor and in engine room in cellar with 50 ft. of 2½ in. approved hose in one length. Sec. 20, Ch. 12, Code of Ordinances."

Order No. 68728-F, dated December 4, 1924—

"1. Provide an approved intermediate tank or pressure reducing valve for standpipe system * * *."

Order No. 68729-F, dated December 4, 1924—

"1. Provide iron or kalameined shutters at all openings in the exterior wall above the 1st story which are distant in a direct line not less than 30 ft. from any opening in any other building and not in the same plane with said openings and which are not more than 50 ft. above a neighboring roof at north and west sides of building, or other approved protection, as per Sec. 375, Article 18, Chapter 5, Code of Ordinances."

Order No. 68730-F, dated December 4, 1924—

"1. Provide a tank on roof of at least 3500 gallon capacity for the standpipe system, said tank to be so elevated that the bottom will not be less than 20 ft. above the roof level. Sec. 20, Ch. 12, Code of Ordinances."

and

WHEREAS, the building is fireproof, 15 stories in height, 56.6 ft. by 77 ft. and 86.9 ft., irregular in area; OCCUPIED as a factory building; engraving, polishing and diamond setting; about 23 persons to each story; and

WHEREAS, the appellant claims in re: Order No. 68726-LD, Item 2, by placing hose at balcony floor outlet would create a hazard due to blocking the passageway; re: to Order No. 68728-F, that the present installation was approved by the fire department; re: to Order No. 68729-F, that there are 24 windows on the west side and 14 windows on the north side of the building which are affected; that there would be no serious fire hazard removed by complying with the order; re: to Order No. 68730-F, that there are two tanks, each 5,000 gallons capacity, the bottoms

MINUTES

of which are 6 ft. above the highest outlet and approved by the fire department.

Resolved, that the order of the fire commissioner, No. 68726-LF, Item 2, be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*; that Order No. 68728, Item 1, be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that pressure reducing valve shall be installed at outlets where pressure exceeds 80 lbs.; that Order No. 68729, Item 1, be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the windows on the west wall, over fireproof roof of adjoining premises; that Order No. 68730, Item 1, be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that a 3,500-gallon reserve shall be maintained in the present tank for standpipe supply; and that an approved O. S. and Y. gate valve shall be provided on the down side of upper check; and *granted* so long as conditions as to occupancy and use shall remain substantially unchanged.

601-25-A.

APPELLANT—May E. Smith, owner.

SUBJECT—Appeal from decision of superintendent of buildings.

PREMISES AFFECTED—3052 Emmons avenue, Brooklyn.

APPEARANCES—

For Appellant: Henry H. Klein and Julius Hochfelder.

For Administration: None.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle..... 4

Negative 0

Absent: Fire Chief Kenlon 1

THE RESOLUTION:

(601-25-A)

WHEREAS, May E. Smith, owner, filed, June 10, 1925, an appeal, from a decision of the superintendent of buildings, affecting premises 3052 Emmons avenue, Borough of Brooklyn; and

WHEREAS, the decision of the superintendent of buildings, rendered May 21, 1925, reads:

"2. The proposed placing of a one-story structure on the westerly line of this plot would render the exit and ingress facilities of the seven dwellings directly southeasterly of same inadequate for the safety of the occupants therein, and constitutes a fire hazard.

"Proposition denied.";

and

WHEREAS, the premises consists of a plot of ground fronting on Emmons avenue in a business district on which there is a one-story bungalow and a one-story store building, the frontage of the plot on Emmons avenue being 55 ft. and the depth at the westerly end 36 ft.; the one-story store building was erected under plans approved by the superintendent of buildings on June 9, 1924; on November 22, 1924, the superintendent of buildings revoked the plans, No. 8894-1924, on the ground of misrepresentation; on May 21, 1925, amended plans were filed; and

WHEREAS, appellant contends there are no bungalows behind her store; that there is a 5-foot passageway on one side, and an 18 ft. 6 in. passageway on the other side leading to Emmons avenue; that the only easement of egress is a 3 ft. private walk; and

WHEREAS, it is the opinion of the board that one-story existing building, as now constructed and restricted to the dimensions as indicated on the plans filed in this appeal, presents no unusual fire hazard, nor does it expose the occupants of the bungalows at the rear to any extreme danger.

Resolved, that the decision of the superintendent of buildings be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the structure shall

be erected in accordance with the requirements of the building code, restricted to the figured dimensions as indicated on plans on file in this appeal; and that all necessary permits required by law shall be obtained within 60 days.

975-25-A.

APPELLANT—Albert E. Kleinert, superintendent of buildings, Borough of Brooklyn.

SUBJECT—Revocation of Certificate of Occupancy No. 5336, issued October 27, 1924.

PREMISES AFFECTED—1597 Park place, Brooklyn.

APPEARANCES—

For Appellant: Joseph P. Smithers, assistant engineer, and Peter P. Murphy.

For Owner: John H. McCooley, Jr.

For Opposition: Chas. Philiphian.

For Administration: Inspector Peter P. Murphy of bureau of buildings.

ACTION OF BOARD—Appeal granted; certificate of occupancy revoked.

THE VOTE TO GRANT and REVOKE CERTIFICATE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Fire Chief Kenlon 4

Negative: Commissioner Guilfoyle 1

Absent 0

THE RESOLUTION:

(975-25-A)

WHEREAS, Albert E. Kleinert, superintendent of buildings, Borough of Brooklyn, filed, September 18, 1925, an appeal for revocation of Certificate of Occupancy No. 5336, issued October 27, 1925; premises 1597 Park place, Brooklyn; and

WHEREAS, the building is frame, one (1) story in height, 43 ft. by 61 ft. in area, located in a residence district and occupied for rags and paper storage; and

WHEREAS, Permit No. 5961-1920 was procured to convert a public stable into a junk shop by removing the stalls, and it appears that in April, 1923, an additional permit was issued for the reconstruction of said structure, without reference to the previous permit; and

WHEREAS, the superintendent of buildings contends that this was a misrepresentation and that the work involved was in excess of 50 per cent of the value of the building, as defined by section 6 of the building zone resolution; and

WHEREAS, it appears from the facts adduced that the superintendent of buildings issued the permit for substituted use without authority under Sec. 6 of the Building Zone Resolution.

Resolved, that the appeal of the superintendent of buildings for the Borough of Brooklyn be and it hereby is *granted*, and that Certificate of Occupancy No. 5336, issued October 22, 1924, for premises 1597 Park place, Brooklyn, be and it hereby is *revoked*.

MINUTES

THE RESOLUTION:

(431-25-A)

WHEREAS, O'Connor & Bain, for Lotos Oil & Distributing Corp., owner, filed, April 21, 1925, an appeal, with the board of appeals, from an order of the fire commissioner, affecting premises 218th to 220th street and Harlem River, Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 17, 1925, reads:

"5. All storage tanks comprising or forming a part of an oil storage plant shall be buried so that the tops thereof shall be at least two feet below the grade level."

and

WHEREAS, the premises consist of a plot of ground, lying between Ninth avenue and Harlem River, 320 ft. by 110 ft. in area, upon which is located the oil storage and distributing plant of the Lotos Oil and Distributing Corp., consisting of an office, a pump house and also twelve (12) 31,500 gallon storage tanks, each 11 ft. in diameter and 44 ft. long, used for the storage of gasoline; the tanks being located in a concrete enclosure of sufficient area and height to accommodate the liquid capacity of said tanks, the tops of tanks are located approximately 6 ft. above ground level; and

WHEREAS, appellant contends that, due to the nature of the soil and the height of the water table, it would be a hardship to comply with the order of the fire commissioner.

Cal. No. 431-25-A.

June 8th, 1925.

PREMISES: 218th to 220th Street &

Harlem River, Manhattan.

REPORT OF COMMITTEE:

A committee of the Board consisting of Chairman Walsh, Fire Chief Kenlon, Messrs. Holland and Connell visited the above premises on June 8th, 1925.

The appeal is before the Board on an order of the Fire Commissioner requiring the burial of oil storage tanks. The appellant seeks relief from the entire burial of the tanks for the reasons that the ground is on the banks of the Harlem River and if compelled to bury same they would be below tide level. The property is now occupied with temporary wooden shacks and one story frame structures set on discarded scows.

The entire west side of 9th Avenue (north of the 3rd Avenue car barns on 217th Street) is vacant, so there is no improvement that would be in any way impaired or adversely affected by any means or hazard.

The plans before us on this appeal, propose the installation of twelve steel tanks, installed horizontally; the natural grade is approximately six feet above tide water.

The committee recommends that the proposed installation be separated into batteries of not more than three tanks to each battery and that the tanks be set approximately half-way (diameter) below grade and that the enclosure walls shall be built of reinforced concrete, carried to the top of the tanks and all enclosures and tanks to be filled and covered over with earth; the fill to extend not less than three feet above the top of the tanks, and that a reinforced concrete wall shall be erected outside the tank installation enclosure; these outside enclosure walls to be not less than 10 ft. high, the earth fill to be sloped from the top to the inside of the exterior enclosure walls at bottom; the tanks so installed to be equipped in accordance with the rules of the Fire Department and the ordinances in all other respects; a yard hydrant with anti-freezing valves and siamese connection to be provided at the end of the dock, connected to and supplied from approved pumps hooked up to the city water mains, and that a revolving water line nozzle shall be provided, one to each battery enclosure of three (3) tanks, and that an approved liquid fire-fighting medium shall be provided and maintained operative from an independent pump house, the pump house to be isolated from the tank enclosure and to be constructed fireproof. It is further

recommended that the sub-dividing wall between each battery of tanks shall be carried up at least 6 ft. above the top of the earth fill of the tank, the ends of these walls to be returned on a rack of 45 degrees at opposite ends and that a return of the drawings shall be made to this Board for approval, in compliance with the foregoing report.

(Signed) WILLIAM E. WALSH,
JOHN KENLON,
HENRY L. CONNELL,
JAMES P. HOLLAND.

WHEREAS, this appeal was granted by the board at its meeting June 9, 1925, on certain conditions, and appellant requested a modification of these conditions.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the equipment shall be installed in accordance with the recommendations of the report of the committee of inspection, except that the entire premises be enclosed in a wall of reinforced concrete or approved masonry, the exterior of front wall facing the street to be finished with face brick; and that return drawings shall be made to this board in accordance with such report for approval before submitting same to the fire department for consideration. The necessary permits required by law to be obtained and work executed to completion without suspension or unnecessary delay.

1166-24-A.

THE RESOLUTION:

(1166-24-A)

WHEREAS, Copp-Stratton, Inc., lessee, filed, September 25, 1924, an appeal, with the board of appeals, from orders of the fire commissioner, affecting premises north side Bradford avenue (41st street), 350 ft. west of Lawrence street, Flushing, Borough of Queens; and

WHEREAS, the orders of the fire commissioner, dated August 27, 1924, read:

"No. 61405-F:

"1. Provide a separate and distinct system of *Automatic Sprinklers* throughout building having at least one source of water supply * * *."

"No. 61406-F:

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof * * *";

and

WHEREAS, the building is non-fireproof, two stories (24 ft.) in height, 124 ft. 6 in. by 100 ft. (approximately 13,500 sq. ft.) in area; OCCUPIED as a lumber mill, 22 persons per story; and

WHEREAS, appellant contends that ample exits have been provided; that the building is only two stories in height, and proposes to demolish this structure and erect a new building within two years, and that great hardship would result if compelled to comply with the orders; and

WHEREAS, this appeal was granted by the board at its meeting December 2, 1924, on certain conditions, and ap-

MINUTES

pellant requested a modification of the time limit set.

Resolved, that the orders of the fire commissioner be and they hereby are *modified*, and the appeal be and it hereby is *granted*, holding this order in abeyance for a period of one year from date of this action, subject to the demolition of the present building and the erection of a new and permanent structure, so long as surrounding conditions with respect to location of next nearest structure shall not be changed, *on condition* that the recommendations of the fire department of June 20, 1924, shall be complied with in all respects.

THE RESOLUTION:

(182-25-A)

WHEREAS, the Surface Combustion Company, for Fidelity Metal Company, owner, filed, February 13, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises east side of Ranton street, corner Newtown Creek, Brooklyn; and

WHEREAS, the decision of the fire commissioner, rendered March 3, 1925, in acting on Alteration Application No. 2782-24, reads:

"1. Burners must be of a type approved by the Board of Standards and Appeals.";

and

WHEREAS, the premises consist of a plot of ground upon which is located the plant of the Fidelity Metal Company, consisting of a one-story fireproof building, 97 ft. by 288 ft. in area; OCCUPIED for smelting metal; and

WHEREAS, a fuel oil burning system has been installed consisting of two 10,000-gallon fuel oil storage tanks, located on concrete piers at a distance of 50 ft. from the nearest building, surface combustion burners and the necessary valves, pumps and piping to make a complete installation; and

WHEREAS, appellant requests a temporary permit pending an inspection of the burner; and

WHEREAS, this appeal was granted by the board at its meetings April 21, 1925, and July 28, 1925, for a temporary period, and appellant requested an extension of the time limit set.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a period of 90 days, at owner's risk, pending determination by the board of standards and appeals on petition now before it.

THE RESOLUTION:

(638-23-BZ)

WHEREAS, Samuel Rosenblum, for Max Notess, owner, filed, May 23, 1925, an application, under the building zone resolution, to permit in a residence district the maintenance of a garage for the storage of three (3) pleasure motor vehicles, two spaces rented to persons not residing on the premises; premises 2965 Valentine avenue, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 24, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Valentine avenue, Bedford Park boulevard and East 201st street are in residence districts; and

WHEREAS, the order of the fire department, dated May 4, 1923, reads:

"1. Discontinue the maintenance of a garage which is not maintained as an accessory use on these premises.";

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 25 ft. and a depth of 19 ft.; to be occupied as a garage for the storage of three (3) pleasure motor vehicles, two spaces rented to persons not residing on the premises; and

WHEREAS, applicant filed the duly acknowledged consents of owners of 80 per cent of the property frontage deemed affected, and the board deemed that a temporary permit for a period of two years should be granted.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted*, for a temporary period of two years from date of this action, *on condition* that the capacity of the garage be limited to three automobiles of the pleasure car type, space for two of which may be rented to persons not residing on the premises; that there shall be no gasoline storage equipment installed on premises; that there shall be no signs or advertising displayed on the premises.

644-25-BZ.

APPLICANT—H. I. Feldman, for Max Ackerman, owner.
SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district, extending from an unrestricted district, the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—301-305 East 97th street, Manhattan.

APPEARANCES—

For Applicant: Sidney R. Diamond, Samuel Rosenblum.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE RESOLUTION:

(644-25-BZ)

WHEREAS, H. I. Feldman, for Max Ackerman, owner, filed, June 22, 1925, an application, under the building zone resolution, to permit in a business district, extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 301-5 East 97th street, Borough of Manhattan; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meet-

ing, November 24, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 97th street is in a business and unrestricted district; that Second avenue is in a business district, and that East 98th street is in a business and unrestricted district; and

WHEREAS, the decision of the superintendent of buildings, rendered June 18, 1925, reads:

"The location of a garage for the use of more than five cars in a business district is contrary to section 4 of the Building Zone Resolution.";

and

WHEREAS, the proposed building is non-fireproof construction, two stories in height, with a frontage of 75 ft. 8½ in. and a depth of 100 ft. 11 in.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, applicant supported his basis of appeal under section 7-c of the building zone resolution, and the board deemed it would be an unnecessary hardship in this circumstance to deprive applicant of the use of his entire premises.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building be limited in height to two stories above grade; that the rear and gable walls shall be unpierced throughout their entire height and length; that a rear yard of not less than 10 ft. in depth for full width of premises be provided at the level of the second tier of beams; that a skylight be provided with lower wall ventilator over 1st story at rear, glazed with wire glass, protected with wire guards above; that any skylight installed in the main roof shall be glazed with plain glass, protected with wire guards above and below; that there shall be no vehicular entrance within the business area of the premises; that the front elevation shall be finished with face brick and architectural terra cotta or stone trimmings; that no roof sign shall be erected or maintained; that any signs erected shall be confined to within the unrestricted use area of the building; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

THE RESOLUTION:

(1268-22-BZ)

WHEREAS, Philip J. Sinnott, attorney for Estate of John Cullen, Florence M. Reilly, executrix, owner, filed, October 26, 1922, an application, under the building zone resolution, to permit in an unrestricted district and partly in a business district the erection and maintenance of a garage for more than five motor vehicles; premises 331-35 East 107th street, 324-48 East 108th street, 2099-2103 First avenue, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its regular meeting, December 19, 1922, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that First avenue is an unrestricted district and 107th and 108th streets are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered May 9, 1922, in acting on N. B. App. No. 154-22, reads:

"This amendment is disapproved with objection Nos. 1 and 2 repeated:

"1. Inasmuch as the premises are located partly in a business district, the erection of a building for use or occupancy as a public garage is prohibited by the Building Zone Resolution, Art. 2, Sec. 4. A public school is located on the same street between the same intersecting streets, therefore a garage is also prohibited by Section 20, Rules and Regulations of the Board of Standards and Appeals, Art. 5, Reconsideration denied.";

and

WHEREAS, the proposed building is to be of non-fire-proof construction, one story in height, with a frontage of 200 ft. on 108th street and 75 ft. on 107th street, 100 ft. 11 in. on First avenue and a depth of 200 ft.; to be occupied as a garage for more than five motor vehicles with stores on First avenue front; and

WHEREAS, there existed on the street between the intersecting streets on July 25, 1916, a stable for more than five horses and the board deemed that the school on 108th street would not be affected, in that there would be no entrance or exit to the garage on 108th street; and

WHEREAS, this application was granted by the board at its meeting, December 19, 1922, on certain conditions, which were modified as to time October 2, 1923, and applicant's representative now requests a modification as to fireproofing and area.

Resolved, that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the garage structure be limited to a one-story building not exceeding a frontage of 75 ft. on 107th street and 100 ft. on 108th street; that the building shall be equipped with an approved one-source sprinkler system with 4 in. street main connections; that there be no openings, other than windows, on 108th street, the sills to be not less than 6 ft. above the sidewalk level; and an emergency fire exit 3 ft. 8 in. wide by 7 ft. in height; that the rear and gable walls shall be unpierced throughout their entire height and length; that the front elevations on 108th street, 107th street and First avenue be finished in face brick, with architectural terra cotta or stone trimmings; that there shall be not more than two vehicular entrances on 107th street, not to exceed 11 ft. in width;

Resolved, further, that any permits necessary for the prosecution of the work shall be obtained within nine months and the work completed within eighteen months from the date of this action.

Adjourned, 3:45 p. m.

JAMES O'CONNOR, *Secretary*.

THE RESOLUTION:

(761-25-S)

WHEREAS, George and Edward Blum, for 49 West 37th Street Corporation, Inc., owner, filed, July 22, 1925, a petition, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 49-57 West 37th street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered July 16, 1925, reads:

"1. No window pane should exceed 720 square inches in area—Labor Law, Section 264-7.";

and
WHEREAS, the building is fireproof, 17 stories in height, 103 ft. by 98 ft. 9 in. in area at 1st story; OCCUPIED as a factory building, using 25 per cent for manufacturing purposes; about 70 persons on each story; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Two interior fireproof stairways, extending from the 1st story to roof, enclosed in fireproof partitions with fireproof doors at openings; and

WHEREAS, the petitioner proposes to construct the front windows from 1st to 3rd stories of $\frac{1}{4}$ in. plate glass, the maximum size to be 10 ft. by 10 ft. 3 in., or 102.5 sq. ft.; he claims that the architectural features of the building would be lost if forced to comply strictly with the labor law.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the windows on the street front of the three (3) lower stories, the openings to be equipped with approved metal frames and sash, glazed with polished plate glass, $\frac{1}{4}$ in. in thickness, and that the requirements of the labor law shall be complied with in all other respects.

770-25-S.

PETITIONER—Charles H. Richter, for Adlers Monument & Granite Works, lessee.
SUBJECT—Variation of labor law as cited in order of fire commissioner.
PREMISES AFFECTED—148 East 57th street, Manhattan.

MINUTES

ACTION OF BOARD—Petition granted on condition. CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Deputy Fire Chief Martin 5

Negative 0

Absent 0

THE RESOLUTION:

(770-25-S)

WHEREAS, Charles H. Richter, for Adlers Monument and Granite Works, lessee, filed, July 25, 1925, a petition for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 148 East 57th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 20, 1925, reads (Order No. 75781-LD):

"Provide an outside iron balcony fire escape on the rear of the building conforming to Section 273 of the Labor Law. Except that exit door shall be a fire door, with substantial steps to the sills, properly secured, when sill is more than 8 in. above the floor level. Where there is no safe egress from the roof, a gooseneck ladder shall be provided from the top balcony to the roof. Unobstructed egress from the foot of the fire escape shall be as required by Sec. 273 of the Labor Law, or to open adjoining yard, with egress to the street, or carry out a proper alternative method of complying with Rule 3 of the Board of Standards and Appeals adopted July 29th, 1924.";

and

WHEREAS, the building is non-fireproof, two stories in height, 18 ft. by 99 ft. in area at 1st story; OCCUPIED as a factory, 15 persons on the 2nd story. EXITS: An interior wooden stairway, extending from the 1st story to 2nd story; enclosed in lath and plaster partitions with wooden doors at openings; ROOFS of adjoining buildings same level; and

WHEREAS, the petitioner proposes to construct a party wall balcony at front on 2nd story connecting with fire escape balcony of premises adjoining at the west, which is under the same ownership; furthermore, he claims that there are practical difficulties in providing a standard fire escape on the rear with egress from the same; that the front part of 2nd story is the only part occupied, and requests the board to accept his proposition in lieu of complying with fire escape Order No. 75781-LD.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted on condition that the manufacturing use shall be confined to a space within 35 ft. of the street front; that a party wall fire escape with steps from floor to balcony and easement window to fire escape shall be provided, connecting with balcony fire escape on the premises to the west (No. 146), and granted only so long as both structures remain in single ownership; and only so long as conditions as to occupancy and use remain substantially unchanged and this building be not increased in height or area.

649-25-S.

PETITIONER—Philip Blei, for Alliance Fireproof Door Company, owner.

SUBJECT—Variation of labor law as cited in orders of fire commissioner.

PREMISES AFFECTED—155 Freeman street, Brooklyn.

Negative: Commissioner Guilfoyle 1

Absent 0

THE RESOLUTION:

(649-25-S)

WHEREAS, Philip Blei, for Alliance Fireproof Door Company, owner, filed, June 23, 1925, a petition for variation from the requirements of the labor law, as cited in orders of the fire commissioner, affecting premises 155 Freeman street, Borough of Brooklyn; and

WHEREAS, the orders of the fire commissioner, dated June 2, 1925, read as follows (Orders Nos. 78965-LD and 78963-LD):

"1. Arrange the entrance doors at street so as to open outwardly, as per Section 271 of the Labor Law."

"1. Provide an outside iron balcony fire escape on the front of the building with balconies 4 ft. in width connected by stairways not less than 22 in. wide, placed at an incline of not more than 45 degrees, extending from the ground to the highest story, constructed as per Section 273 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with Sec. 271 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, three stories in height, 25 ft. by 100 ft. in area at 1st story, 25 ft. by 95 ft. in area at 2nd story and 25 ft. by 40 ft. at 3rd story; OCCUPIED as a factory building, about 4 persons to each story. EXITS: An open interior wooden stairway, extending from the 1st story to top story; ROOFS of adjoining buildings same level at west; and

WHEREAS, the petitioner proposes to construct a 60 degree stairway on rear of 2nd story, a gooseneck ladder from roof of 2nd story extension to main roof, and a drop ladder in guides from roof of 1st story extension to the ground, where there is direct egress to Eagle street through a driveway adjoining property at north.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Order No. 78965, Item No. 1, on condition that a wicket door shall be provided in a single leaf of the existing vehicular door; granted, as to Order No. 78963, Item No. 1, on condition that a 60 degree iron stairway shall be provided on the rear of the 2nd story, with a gooseneck ladder on the roof of the 2nd story extension to main roof and drop ladder in guides from roof of 1st story extension to yard, with unobstructed egress through open courtway direct to Eagle street; granted so long as conditions as to occupancy and use remain unchanged.

THE RESOLUTION:

(684-25-S)

WHEREAS, A. H. Howard, for Horoscope Realty Company, owner, filed, June 30, 1925, a petition for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises at 22 Warren street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 2, 1925, reads (Order No. 75148-LD):

"1. Extend the interior stairway on the east side of the building from fifth story to roof and also enclose said stairway with partitions of fire resisting material extending from 1st story to and including the bulkhead on the roof, constructed as per Sec. 271 of the Labor Law and Rule 1, Board of Standards and Appeals, adopted July 29th, 1924.

"2. Arrange the fire escape on the front of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Sections 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with the requirements of the Labor Law, Section 271. Among the defects noted are the following:

"(1) Windows on course not fireproof, self-closing.

"(2) No counterbalanced stairway from lowest balcony to ground.

"(3) Rusted—requires painting.";

and

WHEREAS, the building is fireproof, five stories in height, 25 ft. by 100 ft. in area at 1st story and 25 ft. by 86 ft. in area above; OCCUPIED as a tenant factory; assembling radio parts, offices; about 5 persons on each story. EXITS: An interior wooden stairway, extending from the 1st story to top story; enclosed in wooden partitions with wooden doors at openings; a 60 degree fire escape on the front of the building, having non-fireproof openings along the course thereof, extending from top story to the 2nd story; with drop ladder in guides to sidewalk; ROOFS of adjoining buildings same level; and

WHEREAS, the petitioner proposes to relocate the double rung iron ladder from top story to scuttle in roof; to provide a gooseneck ladder from top balcony of front fire escape to the roof; he claims that the building is of small height and area.

Resolved, that the order of the fire commissioner be and it hereby is *affirmed*, and the petition be and it hereby is *denied*.

THE RESOLUTION:

(730-25-S)

WHEREAS, David M. Jones, for R-W Realty Company, Inc., lessee, filed, June 10, 1925, a petition for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 80 Nassau street, Borough of Manhattan, and 9-11 Dutch street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated May 15, 1925 (Order No. 77313-LF), reads:

"1. Install an adequate interior electric fire alarm system in accordance with the Rules of Board of Standards and Appeals and the enclosed approved layout."

and

WHEREAS, the premises consists of two non-fireproof buildings, having the cellar in common, five stories in height on Nassau street and four stories on Dutch street; 35 ft. 6 in. by 102 ft. and 35 ft. 9 in. by 68 ft. 4 in., respectively, in area at 1st story. OCCUPIED: No. 80 Nassau street, restaurant, 30 persons; 1st story, store; 2nd story, restaurant, 18 persons; 3rd story, manufacturing, 10 persons; 4th story, manufacturing, 14 persons; 5th story, manufacturing, 15 persons. Nos. 9-11 Dutch street, 1st story, restaurant, 8 persons; 2nd story, club, 3 employees; 3rd and 4th stories, vacant; an interior wooden stairway in each building, extending from cellar to top story. No. 80 Nassau street, enclosed in fire-retarded partitions with kalamein doors at openings; a fire escape on the rear of the front wing and one on the front of the rear wing of the building, extending from the main roof of each wing to the roof of 1st story, having fireproof openings on the course thereof, with EGRESS to adjoining building at south; there is a fireproof passageway at 2nd story connecting the front and rear wings of the building. No. 9-11 Dutch street, a fire escape on the front of the building, extending from top story to 2nd story; roof of adjoining buildings to 80 Nassau street, one story lower at south, one story higher at north; and

WHEREAS, the petitioner proposes to provide fire pails and fire extinguishers as the board may deem necessary, also one large gong on the exterior of the building properly located for the purposes of notifying tenants on upper floors; he requests the board to modify fire alarm Order No. 77313-LF accordingly.

Resolved, that the order of the fire commissioner be and it hereby is *affirmed*, and the petition be and it hereby is *denied*.

THE RESOLUTION:

(740-25-S)

WHEREAS, Gronenberg & Leuchtag, for Lanabel Realty Company, owner, filed, July 15, 1925, a petition for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 571-583 Eighth avenue and 303-5 West 38th street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, dated July 9, 1925, reads:

"1. Exterior openings at 1st, 2nd, 3rd and 4th floors facing 38th Street and also 8th Avenue should comply with Section 264 of Labor Law and Rule 503 of Industrial Code.";

and

WHEREAS, the building is fireproof, 23 stories in height, 98 ft. 9 in. by 100 ft. in area at 1st story; OCCUPIED as a tenant factory, about 175 persons on each story; EQUIPPED with a sprinkler system and a fire alarm sig-

MINUTES

nal system. EXITS: Two interior fireproof stairways, extending from the 1st story to roof, enclosed in fireproof partitions with fireproof doors at openings; and

WHEREAS, the petitioner proposes to construct the front windows opening on 38th street, also on Eighth avenue, from 1st to 4th story, inclusive, to be part pivot and part stationary, the frames fireproof with $\frac{1}{4}$ in. plate glass, the maximum size on 1st story 10 ft. 8 in. by 18 ft. 6 in., or 218 sq. ft., on 2nd, 3rd and 4th stories 6 ft. 6 in. by 14 ft. 8 in., or 110 sq. ft.; he requests the board to permit the arrangement and sizes as proposed, otherwise the architectural features would be lost, if forced to comply strictly with the labor law.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the petition be and it hereby is *denied*.

THE RESOLUTION:

(777-25-S)

WHEREAS, Charles B. Meyers, for 250 West 35th Street Corporation, lessee, filed, July 27, 1925, a petition for variation from the requirements of the labor law, as cited in decision of the superintendent of buildings, affecting premises 248-52 West 35th street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings reads:

April 18, 1925—

"8. Openings referred to in latest amendment, namely, there on front at 1, 2 and 3rd floors, should comply with Rule 503 of Industrial Code and Section 264 of Labor Law."

June 20, 1925—

"9. Windows should be self-closing as per Section 264 Labor Law.";

and

WHEREAS, the building is fireproof, 16 stories in height, 75 ft. by 98 ft. 9 in. in area; OCCUPIED as stores, offices and show rooms, 25 per cent manufacturing, averaging 75 persons per story from the 2nd to 16th story; EQUIPPED with a sprinkler system and fire alarm signal system. Means of EGRESS: One interior fireproof enclosed stairway and one fire tower; and

WHEREAS, the petitioner proposes to construct show windows on the 1st, 2nd and 3rd stories on the front of the building of metal frames, glazed with $\frac{1}{4}$ in. plate glass in excess of 720 sq. in., and requests permission to omit the self-closing device on the front windows facing the street, and contends that the upper stories of the building are set back 8 ft. 8 in. and 17 ft. 8 in., respectively, from the building line.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, as to Objection No. 8, so far as it affects the windows on the street front of the three (3) lower stories, *on condition* that all openings shall be equipped with approved metal frames and sash, glazed with polished plate glass, not less than $\frac{1}{4}$ in. in thickness; *granted* as to Objection No. 9,

only so far as it affects the windows on the street front of the twelve (12) lower stories (inclusive).

THE RESOLUTION:

(784-25-S)

WHEREAS, Charles B. Meyers, for Clunagh Realty Holding Corporation, owner, filed, July 20, 1925, a petition for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 462-68 Seventh avenue and 209-11 West 35th street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered April 13, 1925, reads:

"12. All windows should have panes not more than 720 square inches in area and not over 48 in. in any dimension—Section 264 of Labor Law and Rule 503 of Industrial Code.";

and

WHEREAS, the building is fireproof, 23 stories in height, 82 ft. 9 in. by 100 ft. in area; OCCUPIED as store, show rooms, office and 25 per cent factory, averaging 100 persons per story; EQUIPPED with a sprinkler system and fire alarm signal system. Means of EGRESS: One interior enclosed fireproof stairway and fire tower; and

WHEREAS, the petitioner proposes to construct show windows on the 1st, 2nd and 3rd stories, facing the street, of metal frames, glazed with $\frac{1}{4}$ in. thick plate glass in excess of 720 sq. in., and contends that the compliance with the requirements of the labor law would detract from the architectural appearance of the building and would make the use of these rooms for show rooms impracticable.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the windows on the three (3) lower stories on the street front, *on condition* that all openings shall be equipped with approved metal frames and sash, glazed with polished plate glass, not less than $\frac{1}{4}$ in. in thickness, and that the labor law requirements shall be complied with in all other respects.

THE RESOLUTION:

(925-25-S)

WHEREAS, the 578 Madison Avenue Corporation, owner, filed, September 11, 1925, a petition for the variation of the requirements of the labor law, as cited in decision of the superintendent of buildings, affecting premises 578 Madison avenue, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, dated September 3, 1925, reads:

"11. All windows should be divided into panes not exceeding 720 sq. in. in area.";

and

WHEREAS, the building is fireproof, 20 stories in height, 47 ft. by 125 ft. 5 in. in area at 1st story. OCCUPIED as a factory building, using 25 per cent for manufacturing purposes; EQUIPPED with a fire alarm signal system. EXITS: Two interior fireproof stairways, extending from the 1st story to roof, enclosed in fireproof partitions with fireproof doors at openings; and

WHEREAS, the petitioner proposes to construct the front windows on both street fronts at 1st and 2nd stories of $\frac{1}{4}$ -inch plate glass, the maximum size at 1st story 6 ft. 10 in. by 9 ft. 4 in.; at 2nd story 6 ft. 10 in. by 5 ft. 6 in.; he requests the board to permit sizes as proposed for show window purposes.

Resolved, that the board of standards and appeals does hereby *make* a variation from the requirements of the labor law, and that the petition be and it hereby is *granted* only so far as it affects the windows on the street front of the two (2) lower stories, *on condition* that all openings shall be equipped with approved metal frames and sash, glazed with polished plate glass not less than $\frac{1}{4}$ inch in thickness and that the labor law requirements shall be complied with in all other respects.

THE RESOLUTION:

(625-25-S)

WHEREAS, Philip Markowitz, for Max Seitelbach, owner, filed a petition, June 17, 1925, with the board of standards and appeals, from orders of fire commissioner and decisions of the superintendent of buildings, affecting premises 148-150 East 28th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated August 6, 1925, reads:

"1. Install an adequate interior electric alarm system in accordance with the rules of the board of standards and appeals and the enclosed approved layout.";

and

WHEREAS, the order of the fire commissioner, dated April 7, 1925, reads:

"1. Arrange the fire escape on the rear of building and the openings leading thereto and the windows open-

ing on the course thereof so that same are in compliance with the provisions of Sections 273 and 274 of the labor law and the rules of the board of standards and appeals, or carry out a proper alternative method of complying with the requirements of Section 271 of the labor law.

"NOTE:—Among the defects noted on this fire escape are the following: Windows on course not fireproof nor self-closing. No fireproof passageway leading to the street from the termination.";

and

WHEREAS, the decision of the superintendent of buildings, dated April 23, 1925, reads:

"You are hereby directed to discontinue the said use of the above described building until a certificate of occupancy has been issued by the superintendent of buildings for such use, in that of occupying building for factory purposes on the 2nd, 3rd and 4th floors, contrary to certificate of occupancy No. 8763, which calls for offices on these floors.";

and

WHEREAS, the decision of the superintendent of buildings, dated May 22, 1925, reads:

"1. Fire escape erected at rear of building does not comply with the labor law, Section 273.

"2. Rear windows of 1st floor barred.

"3. Cellar ceiling not covered with fire resisting material and wooden partitions erected in same.

"4. Doors leading from stair hall to cellar and door to furnace room not self-closing.

"5. Wire glass panes in doors of stair enclosure exceed 360 sq. in. and incombustible sills not provided.

"6. Floor load signs not posted and exit signs and red lights not provided at all exits.";

and

WHEREAS, the building is non-fireproof, 4 stories in height, 37 ft. 6 in. by 45 ft. in area; OCCUPIED: as a factory building, 14 persons on each story; EXITS: An interior fireproof stairway, extending from the 1st story to roof, enclosed in fire-retarding partitions with fireproof doors at openings; a fire escape on the rear of the building, having non-fireproof openings along the course thereof, extending from the roof to the yard level; with no means of EGRESS from the termination of the fire escape to the street; ROOFS of adjoining buildings, same level at west, 6 ft. higher at east; and

WHEREAS, the petitioner claims that originally the present building was two buildings. Under Cal. No. 685-21-S the board granted on September 27, 1921, the use of the premises for factory purposes; that the premises has, since been made into one building; conditions improved in all respects and the occupancy decreased; that the wire glass panes in stair hall doors are 25 in. by 30 in.; he proposes to comply with Items 3 and 6 of the decision of the superintendent of buildings, relative to fireproofing cellar ceiling and posting floor loads; and requests the board to set aside Items 1, 2, 4 and 5 relative to rear fire escapes, barred windows at rear, doors leading from stair hall and to furnace room, also wire glass panes in stair hall doors exceeding 360 sq. in., and to rescind Order No. 1806-1925 of superintendent of buildings, relative to factory occupancy on 2nd, 3rd and 4th stories; the fire department Order No. 75237-LF, relative to interior electric fire alarm system; the fire department Order No. 75239-LD, relative to arrangement of the fire escape on rear of building; and also to grant the issuance of a certificate of occupancy for a factory building.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted* as to the decision of the superintendent of buildings, dated May 22, 1925, as to Item No. 1, only so far as it affects egress from termination of the rear fire escape, *on condition* that a doorway shall be provided in fence to adjoining premises to the south; *denied* as to Items Nos. 2, 3, 4, 5 and 6.

THE RESOLUTION:

(533-25-S)

WHEREAS, Frank H. Quinby, for Goodwill Industries, owner, filed, May 29, 1925, a petition with the board of standards and appeals for variation from the requirements of the labor law as cited in an order of the fire commissioner, affecting premises 269-271 State street, Brooklyn; and

WHEREAS, the order of the fire commissioner reads:

"1. Arrange the fire escape on the rear of the building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of sections 273 and 274 of the labor law and the rules of the board of standards and appeals.

"Among the defects noted on this fire escape are the following: No fireproof passageway leading to the street from the termination.";

and

WHEREAS, the building is non-fireproof, five stories in height, 50 ft. 11 in. by 100 ft. in area, OCCUPIED: Basement, salvage department; 1st story, store; 2nd to 5th stories occupied as office and for repairing chairs, woodwork and clothing; 95 persons above the 1st story; EXITS: An interior fireproof stairway, extending from the 1st story to the roof, enclosed in fireproof partitions with kalameined doors at the openings, a standard fire escape in the front of the building and also a fire escape on the rear of the building, having fireproof openings along the course thereof, extending from the top story (with gooseneck ladder to roof) to the rear yard; with EGRESS from the termination of the fire escape by means of a gate in fence leading to yards of premises to the rear; and

WHEREAS, petitioner filed a letter giving permission to construct a gate in the fence leading to premises to the rear and proposes, in addition to this means of egress, to provide on the 1st story of the premises in question a 4-ft. unobstructed space through the open driveway to State street.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the egress from termination of the fire escape, on condition that an opening in the fence to adjoining premises in the rear is provided and maintained unobstructed.

THE RESOLUTION:

(673-25-S)

WHEREAS, James W. Byrnes, for Mirizusanna, Inc., owner, filed, June 30, 1925, a petition, with the board of standards and appeals, for variation from the requirements of the labor law as cited in an order of the fire commissioner, affecting premises 34-40 South 1st street, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated December 16, 1924, reads (Order No. 70137-LD):

"1. Enclose the interior stairway at west side of building serving as a required means of exit, and the landings, platforms and passageways connecting therewith on all sides with partitions of fire resisting material extending continuously from the 1st story to the under side of the roof boarding, that portion of the under side of the roof beams within the stair enclosure shall be covered with fire resisting material constructed as per Section 271 of the labor law and Rule 1 of the board of standards and appeals adopted July 29, 1924, or carry out a proper alternative method of complying with the requirements of Section 271 of the labor law.

"2. Arrange the fire escape on the south side of the 4-story portion of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Sections 273 and 274 of the labor law and the rules of the board of standards and appeals, or carry out a proper alternative method of complying with the requirements of Section 271 of the labor law. SEE NOTE.

"NOTE:—Among the defects noted on this fire escape are the following: No stairway from lowest balcony to ground. No safe egress to street from termination of fire escape. (Note) There is an iron stairway 24 inches wide leading from termination of fire escape on roof of 1st story extension to stable on 1st story, said stairs is defective, handrails broken and treads loose.

"3. Remove the substandard fire escape on the south side of five story portion of building or reconstruct same as per Section 274 of the labor law and rule 3-A as amended by the board of standards and appeals, May 9, 1924.

"NOTE:—Among the defects noted on this fire escape are the following: No stairway from lowest balcony to ground. No safe passageway to street from termination. No sign of any character shall be placed at openings leading to same.";

and

WHEREAS, the building is non-fireproof, five stories in height, 97 feet by 81 feet in area; OCCUPIED as a tenant factory: 1st story, manufacturing paper boxes, 10 persons; 2nd story, laboratory, 6 persons; 3rd story, manufacturing shoes, 34 persons; 4th story, manufacturing shoes, 27 persons; 5th story, dressmaking, 25 persons; EQUIPPED with a sprinkler system and a fire alarm signal system; EXITS: An interior wooden stair-

MINUTES

way, extending from the 1st story to top story; enclosed in wood metal covered partitions with wood metal covered doors at openings; a wooden ladder to roof scuttle; a fire escape on the front of the building, and two sub-standard fire escapes on rear, having fireproof openings along the course thereof, extending from the main roof to the 1st story; no EGRESS from the termination of the rear fire escape to the street; ROOFS of adjoining buildings 30 feet lower at east.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, as to Items Nos. 2 and 3, only so far as it affects egress from the termination of the fire escape, *on condition* that a fire-retarded enclosed stairway shall be provided from the lowest balcony to a fireproof runway, with egress therefrom direct to street, any openings to be protected with fireproof self-closing doors; that the fire escape shall conform to the requirements of the labor law in all other respects; *denied* as to Item No. 1.

THE RESOLUTION:

(99-22-S)

WHEREAS, Samuel Rosenblum, for Albert Levi, owner, filed, January 24, 1922, a petition with the board of standards and appeals for variation from the requirements of the labor law as cited in a decision of the superintendent of buildings, affecting premises 138 West 34th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings reads:

"1. Plan of vestibule is not clear; obstruction by showcase not permitted. (Also egress from the fire escapes must be through a fireproof passageway and so indicated on plans.);"

and

WHEREAS, the building is non-fireproof, five stories in height, 25 ft. by 98 ft. 9 in. in area, OCCUPIED, 1st story, store; 2nd story, salesrooms, 8 persons; 3rd story, men's tailor, 9 persons; 4th story, furrier, 20 persons; 5th story, cloaks and suits, 20 persons; the means of egress consisting of an interior stairway extending from the 1st story to the roof, enclosed in fire resisting partitions with kalameined doors at the openings, a fire escape on the rear of the building with landing on roof of extension in the 2nd story, with counter-balanced stairway to adjoining yard and with fireproof windows on the course of the fire escape, one on each story being a casement sash; and

WHEREAS, petitioner contends that the show window in the entrance hall is permanently built in and rigid and that there is a fireproof door directly from the entrance to the hallway shutting off the stairway and hallway from this show window; and

WHEREAS, the petitioner, in view of the light occupancy requests that the means of exit be considered adequate; and

WHEREAS, this petition was granted by the board at its meeting April 11, 1922, on certain conditions and petitioner requested a modification of the conditions as to occupancy.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law and that the petition be and it hereby is *granted*, as to egress from the rear fire escape by means of counter-balanced stairway from the 2nd story extension to the yard of the adjoining premises, *on condition* that consent of the adjoining owner is filed with the bureau of buildings, and that the occupancy on the 4th and 5th stories shall not exceed 20 persons, and that the manufacturing occupancy shall not exceed 25 per cent of the floor area of building; and that the decision of the superintendent of buildings as to the vestibule and extending hall partitions to the street be and it hereby is *affirmed*, and the petition as to this item be and it hereby is *denied*.

1546-22-S.

PETITIONER—Samuel Rosenblum, for 106-108 West 32nd Street Corp., owner.

SUBJECT—Request for reopening in re: occupancy—variation of labor law as cited in decision of superintendent of buildings.

PREMISES AFFECTED—106-108 West 32nd street, Manhattan.

APPEARANCES—

For Petitioner: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Resolution modified.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND MODIFY RESOLUTION—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Deputy Fire Chief Martin	5
Negative	0
Absent	0

THE RESOLUTION:

(1546-22-S)

WHEREAS, Samuel Rosenblum, for 106-108 West 32nd Street Corp., owner of building, filed, December 22, 1922, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 106-108 West 32nd street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings reads:

"1. Provide fireproof passage to street from foot of fire escapes. Same must not be below curb level. * * * Sec. 273, Labor Law.";

and

WHEREAS, the building is non-fireproof, six stories in height, 41 ft. 8 in. by 98 ft. 9 in. in area at street level and 41 ft. 8 in. by 88 ft. in area above; OCCUPIED, 1st story, stores; 2nd story, manufacturing; 3rd story, manufacturing; 4th story, manufacturing; 5th story, manufacturing; 6th story, manufacturing; the means of egress consisting of an interior stairway extending from 1st story to roof, to be enclosed in metal lath and cement plaster partitions with fire doors at openings; an exterior stairway on rear of building with fireproof passageway to street from termination of stairs at cellar level through cellar and 1st story hall to street, the exterior stairway being connected by steps with the extension of building to north; the building being equipped with a sprinkler system; and

WHEREAS, this petition was granted by the board at its meeting April 3, 1923, on certain conditions and petitioner

MINUTES

requested a modification of these conditions as to occupancy.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law and that the petition be and it hereby is *granted on condition* that the building shall be equipped with an approved sprinkler system; that a passageway shall be provided in the cellar, separated from remainder of the cellar by an 8 in. brick wall, this passageway leading to the 1st story hall with not more than one (1) opening, protected with self-closing fireproof doors; that the occupancy shall not exceed the legal capacity of the interior stairway, with allowance for automatic sprinkler and interior fire alarm drills;

Resolved, further, that the petition be granted so long as conditions otherwise remain substantially unchanged.

APPLIANCES SUBMITTED FOR APPROVAL.

752-25-SA.

PETITIONER—Fellinger & Hebard, Inc.

SUBJECT—Approval of Toro Emergency Gas Shut-Off Valve.

APPEARANCES—

For Petitioner: Tilman White.

ACTION OF BOARD—Petition put on reserve calendar, subject to report from engineer of board.

729-25-SA.

PETITIONER—Hauck Manufacturing Co.

SUBJECT—Approval of the Hauck Vention Low Pressure Oil Burner.

APPEARANCES—

For Petitioner: W. C. Elze and Henry T. Gerdes.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition placed on reserve calendar pending inspection and report of committee of board.

671-25-SA.

PETITIONER—W. D. Allen Mfg. Co., owner.

SUBJECT—Approval of 2½-inch Angle Hose Valve.

APPEARANCES—

For Petitioner: Andrew L. Boerner.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition placed on reserve calendar pending test and report of fire department.

717-25-SA.

PETITIONER—Paradon Engineering Company.

SUBJECT—Approval of Chlorinating Apparatus.

APPEARANCES—

For Petitioner: Richard Donnelly.

ACTION OF BOARD—Petition withdrawn.

THE VOTE TO WITHDRAW—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Deputy Fire Chief Martin

Negative

Absent

763-25-SA.

PETITIONER—Milwaukee Tank Works.

SUBJECT—Approval of Milwaukee Piston Rotating Port Pump, type No. 705.

APPEARANCES—

For Petitioner: N. R. Bemm.

ACTION OF BOARD—Petition approved.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Deputy Fire Chief Martin

Negative 0

THE RESOLUTION:

(763-25-SA)

WHEREAS, the Milwaukee Tank Works, Inc., filed, July 22, 1925, a petition with the board of standards and appeals for approval of their device known as the Milwaukee Tank Works, Inc., Piston Rotating Port Pump type No. 705 for use with fuel oil installations; and

WHEREAS, this pump is of standard mechanical construction.

Resolved, that the board of standards and appeals does hereby *approve* the device known as the Milwaukee Tank Works, Inc., Piston Rotating Port Pump, Type No. 705, for use in connection with fuel oil burning equipment, *on condition* that the moving parts in contact with oil shall be constructed of brass or bronze.

638-25-SA.

PETITIONER—American Steam Pump Company.

SUBJECT—Approval of American Marsh Duplex Fuel Oil Pump.

APPEARANCES—

For Petitioner: Hugh D. Riordan.

ACTION OF BOARD—Petition approved.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Deputy Fire Chief Martin

Negative

THE RESOLUTION:

(638-25-SA)

WHEREAS, the American Steam Pump Company, filed, June 20, 1925, a petition with the board of standards and appeals for approval of their device known as the American Marsh Duplex Fuel Oil Pump for use in fuel oil installations; and

WHEREAS, this pump is of standard mechanical construction.

Resolved, that the board of standards and appeals does hereby *approve* the device known as the American Marsh Duplex Fuel Oil Pump, for use in connection with fuel oil burning equipment, *on condition* that the moving parts shall be constructed of brass or bronze.

639-25-SA.

PETITIONER—American Steam Pump Company.

SUBJECT—Approval of Marsh Simplex Fuel Oil Pump.

APPEARANCES—

For Petitioner: Hugh D. Riordan.

ACTION OF BOARD—Petition approved.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Deputy Fire Chief Martin

Negative

THE RESOLUTION:

(639-25-SA)

WHEREAS, the American Steam Pump Company filed, June 20, 1925, a petition with the board of standards and appeals for approval of their device known as the Marsh Simplex Fuel Oil Pump; and

WHEREAS, this pump is of standard mechanical construction.

Resolved, that the board of standards and appeals does hereby *approve* the device known as the Marsh Simplex Fuel Oil Pump, for use in connection with fuel oil burning equipment, *on condition* that the moving parts shall be constructed of brass or bronze.

Adjourned, 6:00 p. m.

JAMES O'CONNOR, Secretary.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Tuesday, December 22, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rule 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] *two hundred (200) feet [in width].*

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

(a) For Standard one-half (½) inch heads—

8 feet in 12 foot bays;
9 feet in 11 foot bays;
10 feet in 10 foot bays;
11 feet in 9 foot bays;
12 feet in 5 to 8 foot bays;

(b) For Conran* one (1) inch heads—

20 feet in 5 to 12 foot bays.

(c) For Conran* one and one-quarter (1¼) inch heads—

25 feet in 5 to 12 foot bays.

(d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 "	2 heads
$1\frac{1}{4}$ "	3 "
$1\frac{1}{2}$ "	5 "
2 "	10 "
$2\frac{1}{2}$ "	20 "
3 "	36 "
$3\frac{1}{2}$ "	55 "
4 "	80 "
5 "	140 "
6 "	200 "
7 "	300 "
8 "	420 "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ "	2 heads
$1\frac{1}{2}$ "	3 "
2 "	4 "
$2\frac{1}{2}$ "	6 "
3 "	9 "
4 "	18 "
5 "	34 "
6 "	51 "
7 "	75 "
8 "	105 "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ "	2 heads
2 "	3 "
$2\frac{1}{2}$ "	4 "
3 "	6 "
4 "	12 "
5 "	21 "
6 "	40 "
7 "	60 "
8 "	84 "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.

At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over 2½ inches in size and 1¼ inches where floor valves are larger, and connected to a main drain riser of not less than 1½ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than 1¼ inches in diameter in upper story and arranged to discharge, through a ½-inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a ¾-inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a ¾-inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half (4½) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads.128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests].* Before acceptance all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employes instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before the board—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of the board, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of the board is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

BOARD OF STANDARDS AND APPEALS,

CONTENTS

This issue of the Bulletin contains, in the order given—

Docket.

Call of Clerk's Calendar.

The Trial Calendar.

Notices in Building Zone Cases.

Minutes of Regular Meeting, December 1, 1925, at 10 a. m.

Minutes of Regular Meeting, December 1, 1925, at 2 p. m.

Rules.

Notice of Public Hearing.

Reserve Calendar.

Progress Report.

PUBLIC HEARINGS

Tuesdays, at 10 a. m. and 2 p. m.

Special meetings as published in this Bulletin.

Call of Clerk's Calendar, Tuesdays, at 2 p. m.

All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of the board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, December 8, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, December 15, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

MINUTES

BOARD OF STANDARDS AND APPEALS

REGULAR MEETING.

TUESDAY MORNING, DECEMBER 1, 1925.

Present: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon.

The minutes of the special meeting of the board, held Friday morning, November 20, 1925; the minutes of the special meeting, held Friday afternoon, November 20, 1925; the minutes of the regular meeting, held Tuesday morning, November 24, 1925, and the minutes of the regular meeting, held Tuesday afternoon, November 24, 1925, were approved as printed in the Bulletin, No. 46, Vol. X.

APPEALS FROM ADMINISTRATIVE ORDERS.

230-25-A.

APPELLANT—Frederick A. Loew, owner.
SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—1377 Washington avenue, The Bronx.

APPEARANCES—

For Appellant: George W. Brewster.
For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal laid over to December 15, 1925, at 2 p. m., on request of appellant's representative.

267-25-A.

APPELLANT—The Hanover Fire Insurance Company, owner.

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—34-36 Pine street, Manhattan.

APPEARANCES—

For Appellant: Martin Maher.
For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal laid over to December 8, 1925, at 10 a. m., on request of appellant's representative.

674-25-A.

APPELLANT—John Street M. E. Church Trust Fund Society, owner.

SUBJECT—Appeal from order of fire commissioner.
PREMISES AFFECTED—48 John street, Manhattan.

For Appellant: Omar Powell.
For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—

Affirmative	0
Negative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle and Fire Chief Kenlon	5
Absent	0

THE RESOLUTION:

(674-25-A)

WHEREAS, the John Street M. E. Church Trust Fund Society, owner, filed, June 30, 1925, an appeal from orders of the fire commissioner, affecting premises 48 John street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, No. 74803-LF, dated March 30, 1925, reads:

"1. Provide chain with fusible links attached for fire doors on hoistway on 2nd story north side. Sec. 20, Ch. 12, Code of Ordinances.";

and

WHEREAS, the order of the fire commissioner, dated April 3, 1925, reads:

"1. Provide a non-automatic sprinkler system in cellar and sub-cellar, arranged and equipped as provided in the rules for fire extinguishing appliances adopted by the Board of Standards and Appeals, May 24, 1917, as amended May 2, 1918, and January 21, 1919, effective February 17, 1919, and in the rules and regulations of the Fire Department and in connection therewith provide an automatic fire alarm complete with Central Office connection.";

and

WHEREAS, the building is non-fireproof, six stories in height, 19 ft. by 85 ft. 6 in. in area from 1st to 4th stories and 15 ft. 6 in. by 35 ft. 6 in. in area above; OCCUPIED as a factory building, stationers and printers, about 13 persons on each story, except the 5th and 6th stories, which are for storage only; and

WHEREAS, the appellant claims the property is owned by a charitable organization which would be financially embarrassed if forced to comply with the fire department orders; he further contends the occupancy is small and the business is not a hazardous one.

Resolved, that the orders of the fire commissioner be and they hereby are *affirmed*, and the appeal be and it hereby is *denied*.

686-25-A.

APPELLANT—A. Schrader's Son, Inc., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—477 Clermont avenue, Brooklyn.

APPEARANCES—

For Appellant: William A. C. Schmidt.
For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal denied.

MINUTES

THE VOTE TO GRANT—

Affirmative	0
Negative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle and Fire Chief Kenlon	5
Absent	0

THE RESOLUTION:

(686-25-A)

WHEREAS, A. Schrader's Son, Inc., owner, filed, July 1, 1925, an appeal, from an order of the fire commissioner, affecting premises 477 Clermont avenue, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated June 10, 1925, reads (Order No. 96876-LC):

"1. Remove all gasoline other than in fuel tanks of automobiles or provide an approved underground storage system for storage of gasoline."

and
WHEREAS, the building is non-fireproof, two stories in height, 20 ft. by 93 ft. 15/8 in. at 1st story and 20 ft. by 34 ft. 2 1/4 in. at 2nd story. OCCUPIED: 1st story, garage; 2nd story, paint shop; and

WHEREAS, the appellant contends that they are occupying these premises only temporarily; that their new buildings are under construction and will be completed about September, 1925, where a new underground storage system will be installed according to law.

Resolved, that the order of the fire commissioner be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

783-25-A.

APPELLANT—Samuel Rosenblum, for Solsieg Realty Corp., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—654 Broadway, Manhattan.

APPEARANCES—

For Appellant: Samuel Rosenblum.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle and Fire Chief Kenlon	5
Negative	0
Absent	0

THE RESOLUTION:

(783-25-A)

WHEREAS, Samuel Rosenblum, for Solsieg Realty Corp., owner, filed, July 29, 1925, an appeal from an order of the fire commissioner, affecting premises 654 Broadway, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, No. 81195, dated July 9, 1925, reads:

"1. Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof."

and
WHEREAS, the building is non-fireproof, six stories (95 ft. 6 in.) in height, 29 ft. by 130 ft. in area at 1st story and 29 ft. by 115 ft. above; OCCUPIED as a tenant factory; 1st story, store; 2nd story, hats, 5 persons; 3rd story, suits, 5 persons; 4th story, cut pants, 3 persons; 5th story, manufacturing hats, 30 persons; 6th story, manufacturing pants, 5 persons; and

WHEREAS, the appellant claims the building is provided with legal exits; that the building extends through the block from street to street, enabling the firemen to fight from two fronts; that the occupancy is small and not hazardous.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the building shall be equipped with an approved two-source wet sprinkler system.

788-25-A.

APPELLANT—Samuel Rosenblum, for Dorothy W. Bernstein, owner.

SUBJECT—Appeal from decision of superintendent of buildings.

PREMISES AFFECTED — 28 Buckingham road, Brooklyn.

APPEARANCES—

For Appellant: Samuel Rosenblum and Dorothy W. Bernstein.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—

APPEARANCES—

Affirmative	0
Negative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle and Fire Chief Kenlon	5
Absent	0

THE RESOLUTION:

(788-25-A)

WHEREAS, Samuel Rosenblum, for Dorothy W. Bernstein, owner, filed, July 30, 1925, an appeal, from a decision of the superintendent of buildings, affecting premises 28 Buckingham road, Borough of Brooklyn; and

WHEREAS, the decision of the superintendent of buildings, dated July 10, 1925, reads:

"1. Application denied. Proposition contrary to Sec. 5, Subdivision 4 of the Building Code. Dormitory for children not permitted in frame building as building does not comply with requirements of Sec. 72, 1-A of Code."

and
WHEREAS, the building is of frame construction, three stories in height, 25 ft. by 44 ft. 10 in. in area at 1st story and 25 ft. by 37 ft. 6 in. above. OCCUPIED: 1st story, dormitory, 12 children; 2nd and 3rd stories, living rooms; and

WHEREAS, the appellant contends that the children sleep only on the 1st story; they are not harbored to receive medical care or treatment, they merely reside there; furthermore, the 1st story does not exceed 20 ft. in height; in view of the above facts, the desired occupancy does not come within the purview of section 72, subdivision A of building code.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

789-25-A.

APPELLANT—S. Jackson Tube Co., Inc., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—29-45 Rodney street, Brooklyn.

APPEARANCES—

For Appellant: Reginald B. Reed.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle and Fire Chief Kenlon	5
Negative	0
Absent	0

THE RESOLUTION:

(789-25-A)

WHEREAS, S. Jackson Tube Company, Inc., owner, filed, July 31, 1925, an appeal from an order of the fire commissioner, affecting premises 29-45 Rodney street, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated June 26, 1925, reads (Order No. 972201-C):

"You are hereby notified that an inspection of the above premises, used for the storage of acetylene and

MINUTES

oxygen, shows that the following must be done before the permit requested by you can be issued:

FORTHWITH

"1. Install a 4 inch standpipe system in accordance with the requirements of Sec. 581, Chapter 5, C. O. N. Y.

"2. Plans and specifications to be filed with and approved by the Fire Department before the work of installing the standpipe is commenced.";

and

WHEREAS, the building is non-fireproof, one story in height, 201 ft. by 100 ft. in area; OCCUPIED for manufacturing purposes; 38 persons in all; and

WHEREAS, the appellant contends that the plant manufactures steel tubing, which is not of an inflammable nature; that the demand of the fire department is a technical one; that the profits of the business are not sufficient to warrant the installation of a standpipe system.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so long as conditions as to use, occupancy and industrial operation shall remain unchanged, *on condition* that the building shall not be increased in height or area.

CASES DISMISSED.

APPEALS FROM ADMINISTRATIVE ORDERS.

408-25-A.

APPELLANT—Carbondale Sponge Co., Inc., owner.

MINUTES

APPEARANCES—

For Applicant: Algernon I. Nova and William F. Doyle.

For Opposition: Stanley S. Smith and Walter R. Kuhn.

ACTION OF BOARD—Application laid over to December 8, 1925, at 10 a. m., on request of applicant's representative (for final disposition).

528-25-BZ.

APPLICANT—Alfred J. Boulton, for Harry Seldin, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of a poultry slaughter house.

PREMISES AFFECTED—East side of Bay 37th street, 285 feet north of Cropsey avenue, Brooklyn.

APPEARANCES—

For Applicant: Alfred J. Boulton and Harry Seldin.

For Opposition: Timothy J. Ahearn and Thomas H. Joyce.

ACTION OF BOARD—Report of committee adopted; application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE TO ADOPT REPORT; TO GRANT ON CONDITION—

Affirmative: Chairman Walsh, Commissioners Connell and Flanagan and Fire Chief Kenlon 4

Negative: Commissioner Guilfoyle 1

Absent 0

THE RESOLUTION:

(528-25-BZ)

WHEREAS, Alfred J. Boulton, for Harry Beldin, owner, filed, May 21, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a poultry slaughter house; premises east side of Bay 37th street, 285 ft. north of Cropsey avenue, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 1, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Bay 37th street is in a residence district; that Bay 38th street is in a residence district, and that Cropsey avenue is in a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 1, 1925, reads:

"Proposition contrary to the Zone Resolution, Art. II, Sec. 3:

"A poultry slaughter house in a residential district.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 25 ft. and a depth of 75 ft.; to be occupied as a poultry slaughter house; and

WHEREAS, the board deemed that the character of existing development and the sparsely settled condition of the section warranted the exercise of its discretion under sections 7-f and 21 of the zoning resolution, to permit a temporary variation for non-conforming use.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted, for a temporary period of two years from the date of issuance of permit by the health department, on condition that the health department authorize the conduct and operation of a chicken slaughter house on these premises. The building shall be restricted in height to a one-story structure above grade; the rear and gable walls shall be unpierced throughout their entire height and length unless opening on property in the same ownership and within the same lot area; and that all permits required by law and ordinances shall

be obtained within three months and the building completed within six months.

527-25-BZ.

APPLICANT—John B. Johnston, for Esther Schwartzberg, owner; Israel Farbman, lessee.

SUBJECT—Application (re: decision of superintendent of buildings) under section 21 of the building zone resolution to permit in a business district the change of occupancy from a garage for the storage of five (5) motor vehicles to a poultry slaughter house.

PREMISES AFFECTED—1073 Willoughby avenue, Brooklyn.

APPEARANCES—

For Applicant: Stanley S. Smith.

For Opposition: None.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Commissioners

Connell, Flanagan and Guilfoyle and

Fire Chief Kenlon 5

Absent 0

THE RESOLUTION:

(527-25-BZ)

WHEREAS, John B. Johnston, for Esther Schwartzberg, owner, filed, May 21, 1925, an application, under the building zone resolution, to permit in a business district the change of occupancy from a garage for the storage of five (5) motor vehicles to a poultry slaughter house; premises 1073 Willoughby avenue, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 1, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Willoughby avenue, Wilson avenue and Starr street are all in business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered May 2, 1925, reads:

"Proposition contrary to the Zone Resolution, Art. II, Sec. 6-b-4—

"The conversion of a five-car garage in a business district into a chicken slaughter house.";

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 21 ft. 4 in. and a depth of 50 ft.; to be occupied as poultry slaughter house; and

WHEREAS, the board deemed that applicant failed to establish his basis of appeal under section 21, on the ground of practical difficulties and unnecessary hardship.

Resolved, that the decision of the superintendent of buildings be and the same hereby is affirmed, and that the application be and the same hereby is denied.

751-25-BZ.

APPLICANT—Robert D. Kohn, for Mt. Sinai Hospital, owner.

SUBJECT—Application (re: decision of superintendent of buildings) under section 21 of the building zone resolution to permit in a 1½ times height district the erection of the street walls of a building to a height exceeding the limit set by the zone resolution.

PREMISES AFFECTED—6-16 East 99th street and 5-17 E. 98th street, Manhattan.

APPEARANCES—

For Applicant: Robert D. Kohn, Dr. Goldwater and C. F. Kingsley.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

MINUTES

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon 5
Negative 0
Absent 0

THE RESOLUTION:

(751-25-BZ)

WHEREAS, Robert D. Kohn, for Mount Sinai Hospital, owner, filed, July 17, 1925, an application, under the building zone resolution, to permit in a 1½ times height district the erection and maintenance of the street walls to a height exceeding the prescribed limit required by the zone resolution; premises 6-16 East 99th street and 5-17 East 98th street, Borough of Manhattan; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 1, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the district maps accompanying the building zone resolution show that East 99th street, East 98th street and Madison avenue are in a residence use and 1½ times height district; and

WHEREAS, the decision of the superintendent of buildings, rendered July 13, 1925, reads:

"1. Building is of unlawful height (Section 8 of the Zoning Resolution).";

and

WHEREAS, the proposed building is to be of fireproof construction, 14 stories in height, with a frontage of 150 ft. and a depth of 114 ft. 10 in.; to be occupied as a nurses' home, a portion of front walls exceeding the height limitation imposed by the building zone resolution; and

WHEREAS, the board deemed that applicant established his basis of appeal on the ground of unnecessary hardship under section 21 of the building zone resolution.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the height district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that an open street court of not less than fourteen (14) ft. in depth for a length of not less than seventy-eight (78) ft., above the 3rd story tier, be maintained on the front of the building; that the requirements of the building zone resolution be complied with in all other respects; that all permits necessary for the prosecution of the work shall be obtained within nine months from the date of this action and the construction of the building carried to completion without unnecessary delay.

853-25-BZ.

APPLICANT—McCooley & Conroy, for Fogel-Hirsh Building Company, Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) under section 21 of the building zone resolution to permit in a residence district the erection and maintenance of a building to be used as stores on the first story of the Fourth avenue front and as dwellings above.

PREMISES AFFECTED—8501-8511 Fourth avenue, Brooklyn.

APPEARANCES—

For Applicant: John H. McCooley, Jr., and Mr. Fogel.

For Opposition: A. J. Appell, J. H. Schreiner, Clara Jurek and Henry F. Horman.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon 5
Negative 0
Absent 0

THE RESOLUTION:

(853-25-BZ)

WHEREAS, McCooley & Conroy, for Fogel Hirsh Building

Company, Inc., owner, filed, August 21, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a residence building to be used for store purposes only on the 1st story; premises 8501-8511 Fourth avenue, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 1, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Fourth avenue is in a residence district; that 85th street is in a residence district, and that 86th street is in a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered July 17, 1925, reads:

"Proposed occupancy of 1st floor of tenement house to be located in a residence district for business use is contrary to Art. II, Sec. 3 of the Zone Resolution."; and

WHEREAS, the proposed building is to be of non-fireproof construction, five stories in height, with a frontage of 132 ft. 1¾ in. and a depth of 100 ft. and 107 ft. 2½ in., irregular; to be occupied as stores on 1st story only and apartments above; and

WHEREAS, the board deemed that applicant established his basis of appeal under section 21 of the building zone resolution on the ground of unnecessary hardship.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted*, only so far as it affects the 1st story grade level on the Fourth avenue front, *on condition* that the business use shall be restricted to the operation and conduct of retail mercantile stores, that the rear wall of the stores shall be unpierced throughout; that the street wall of the 85th street front shall be carried through to the Fourth avenue frontage with a brick return not less than 12 in. on the Fourth avenue elevation; that there shall be no commercial exit or entrance or show window permitted on the 85th street front; that the sills of any openings to the store on the 85th street corner shall be not less than 6 ft. above the sidewalk level, and these windows if installed shall be of the double hung pivoted or fixed sash type, glazed with translucent or leaded glass; that there shall be no advertising signs erected or displayed on any part of the premises; any advertising displayed shall be restricted to fixed letters planted on the store front show windows; that there shall be no merchandise, produce, or material used, stored, sold or maintained in the conduct of the business use, displayed or exposed on the street; that a return drawing of the finished design shall be made to this board for its approval, before submitting same to the superintendent of buildings; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action; and that the remainder of the structure be restricted to conforming residence use and that the requirements of the building zone resolution shall be complied with in all other respects.

CASE DISMISSED.

WHEREAS, Croker National Fire Prevention Engineering Co., for the Brooklyn Factory & Power Co., owner, filed an appeal from an order of the fire commissioner, affecting premises 49-61 Clymer street, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated March 26, 1925, reads:

"1. Provide iron shutters at all openings in the exterior wall above 1st story, which are distant in a direct line less than 30 ft. from any opening in any other building and not in the same plane with said openings and which are not more than 50 ft. above a neighboring roof at north side of building or other approved protection as per Sec. 375, Art. 18, Chap. 5, Code of Ordinances.";

and

WHEREAS, the building is non-fireproof, five stories in height, 127 ft. 2 in. by 102 ft. 5 in. in area at the ground level; OCCUPIED as a factory building, about 40 persons on each story; and

WHEREAS, the appellant contends that the only exposure is a wooden shed, one story high at the north side, which is used to protect fireproof blocks from the weather; that there are 60 windows affected by this order; that there would be no additional protection obtained in complying with the order; furthermore, he claims the building is sprinklered, having two (2) 10,000 gallons gravity tanks with 4 in. street connections.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is granted on condition and only so long as the occupancy of the adjoining exposure to the north, namely, manufacturing and storage of fireproof blocks, shall remain unchanged.

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(803-25-A)

WHEREAS, John B. Snook Sons, for Bank of New York

MINUTES

and Trust Company, owner, filed, August 5, 1925, an appeal from an order of the fire commissioner, affecting premises 514-16 Broadway, through to 60-66 Crosby street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated July 22, 1925, reads (Order No. 81937-F):

"1. Install standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof. * * *"; and

WHEREAS, the building is non-fireproof, six stories in height, fronting 103 ft. 7¼ in. on Crosby street and 37 ft. 6 in. on Broadway, about 12,000 sq. ft. in area. OCCUPIED: 1st story, store; 2nd story, manufacturing garters, 60 persons; 3rd story, manufacturing underwear, 100 persons; 4th story, office and storage, 35 persons; 5th story, manufacturing suitcases, 20 persons; 6th story, manufacturing slippers, 35 persons; and

WHEREAS, the appellant contends that the occupancy is non-hazardous; that the building is equipped with a sprinkler system and a fire alarm signal system, a 2½ in. standpipe riser supplied from a 3,000 gallon roof tank; also with legal exit facilities; in consideration of the above facts, he requests the board to modify standpipe Order No. 81937-F.

Resolved, that the order of the fire commissioner be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

806-25-A.

APPELLANT—D. P. Morse, Jr., for Morshapa Company, Inc., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—133-135 Greene street, Manhattan.

APPEARANCES—

For Appellant: John J. Gilmartin.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle..... 4

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(806-25-A)

WHEREAS, D. P. Morse, Jr., secretary, for Morshapa Company, Inc., filed, August 5, 1925, an appeal from an order of the fire commissioner, affecting premises 133-135 Greene street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated April 20, 1925, Order No. 75514-F, reads:

"1. Install standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof. * * *"; and

WHEREAS, the building is non-fireproof, six stories in height, 37 ft. by 85 ft. in area at 1st story and 37 ft. by 78 ft. above. OCCUPIED: 1st story, store; 2nd story, manufacturing hats; 3rd story, manufacturing dolls; 4th story, ruling paper; 5th story, manufacturing hats; 6th story, plating, 15 persons on each story; and

WHEREAS, the appellant contends the unusual height of each story is the cause of the slight excess of height of the building over 85 ft.; that adequate exit facilities are provided; that the arrangements of stairs and exits are such to aid firemen in performance of their work.

Resolved, that the order of the fire commissioner be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

APPELLANT—Patrick J. Cawley, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—3140 Kingsbridge terrace, The Bronx.

APPEARANCES—

For Appellant: Patrick J. Cawley.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire

Chief Kenlon 5

Negative 0

Absent 0

THE RESOLUTION:

(831-25-A)

WHEREAS, Patrick J. Cawley, owner, filed, August 13, 1925, an appeal from order of the fire commissioner, affecting premises 3140 Kingsbridge terrace, Borough of The Bronx; and

WHEREAS, the order of the fire commissioner, No. 30508-LC, dated July 24, 1925, reads:

"Item 4. Provide an automatic shut-off to prevent abnormal flow of the fuel oil to the burner, as per Rule 22-a of the Fuel Oil Rules.

"Item 5. Provide a hydrostatic test of not less than 100 lbs. per sq. in. for all Grade B Fuel Oil, carrying piping as per Rule 25, Sec. 2 of the Fuel Oil Rules.

"Item 9. Provide a remote control for shutting off the supply of oil to the burner in case of an abnormal discharge, as per Rule 26-c of the Fuel Oil Rules.";

and

WHEREAS, the building is of frame construction, two stories in height, 20 ft. by 40 ft.; OCCUPIED as a one-family residence; and

WHEREAS, the appellant claims re: Item 4 that the approval of the burner under Cal. 628-23-S apparently carried with it the approval of the shut-off valve now installed; as to Item 5, all piping, except the vent line, is of standard weight; re: Item 9, the pump used can only be used by a crank handle adjacent to the pump; he further contends that this fuel oil heating system using Grade "B" oil in a one-family residence is not a hazard.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Items 4 and 9, *on condition* that an approved burner shall be installed with automatic trip; as to Item 5, *on condition* that standard wrought-iron pipe shall be used throughout equipment; and *further* that the fuel oil rules shall be complied with in all other respects.

THE RESOLUTION:

(834-25-A)

WHEREAS, Wm. F. Doyle, for Everett E. Wheeler, owner, filed, August 14, 1925, an appeal from an order of the fire commissioner, affecting premises 390-96 Berry street, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, No. 70851-F, reads:

"Provide a separate and distinct system of automatic sprinklers throughout your building having at least one

MINUTES

source of water supply, arranged and equipped as provided in the rules for fire extinguishing appliances, adopted by the Board of Standards and Appeals May 24, 1917, as amended May 2, 1918, and Jan. 21, 1919, effective February 17, 1919, * * *";

and
WHEREAS, the building is non-fireproof, four stories in height, 80 ft. by 94 ft. in area. OCCUPIED: Cellar and 1st story, dead storage of motor vehicles; storage warehouse above; and

WHEREAS, the appellant claims that the merchandise stored does not bring the building under the heading of inflammable or combustible materials; that the building comprises a small area of 7,200 sq. ft.; and

WHEREAS, the building does not exceed a height of 50 ft. to main roof from sidewalk and is located on a corner.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the use and occupancy shall be restricted to automobiles in dead storage on 1st and basement floors and the remainder of building shall be limited to storage of furniture in crates; *granted* only so long as premises shall remain in single ownership and tenancy; and that a watchman shall be maintained throughout the twenty-four hours.

Connell, Flanagan and Guilfoyle..... 4

Absent: Fire Chief Kenlon 1

THE RESOLUTION:

(841-25-A)

WHEREAS, George and Edward Blum, for Frederick Hussey Realty Company, owner, filed, August 18, 1925, an appeal from a decision of the fire commissioner, affecting premises 449-459 Seventh avenue, 163-167 West 34th street and 160-166 West 35th street, Borough of Manhattan; and

WHEREAS, the decision of the fire commissioner, rendered June 12, 1925, reads:

"2. A building fronting on more than one street shall have at least one riser for each street front, as per Rule No. 24, of the Rules of the Board of Standards and Appeals, adopted June 27th, 1922, amended July 20th, 1923, and Chapter 5, Section 581, Article 28, paragraph 3, of the Code of Ordinances.";

and

WHEREAS, the building is fireproof, 16 stories in height, fronting 100 ft. 5 in. on Seventh avenue, 66 ft. on West 34th street and 72 ft. on West 35th street; about 19,279 sq. ft. in area. OCCUPIED: Offices; 25 per cent for manufacturing purposes; about 160 persons on each story; and

WHEREAS, the appellant claims the building is equipped with a sprinkler system, also with two 6 in. standpipe rising lines, having 100 ft. of 2½ in. hose at each outlet, which covers the entire building; he further contends that siamese connections extend to each street front, and requests a modification of the fire department decision.

Resolved, that the decision of the fire commissioner be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

850-25-A.

THE RESOLUTION:

(850-25-A)

WHEREAS, Julius Tischman & Sons, Inc., for Jattison Construction Company, owner, filed, August 20, 1925, an appeal from a decision of the fire commissioner, affecting premises 32-34 West 39th street, Borough of Manhattan; and

WHEREAS, the decision of the fire commissioner, rendered July 11, 1925, reads:

"1. Provide a heating coil in gravity tank.";

and

WHEREAS, the building is fireproof, 14 stories in height, 50 ft. by 98 ft. 9 in. in area at 1st story; OCCUPIED as a factory building, 25 per cent for manufacturing purposes; about 95 persons on each story; and

WHEREAS, the appellant claims that the existing gravity tank is 10,000 gallons capacity; that the bottom 3,500 gallons is reserved for standpipe system; that the tank is located close to the roof of pent house; that the tank construction is frostproof and there is little chance of freezing due to the water being in continuous motion from use.

Resolved, that the decision of the fire commissioner be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

THE RESOLUTION:

(810-25-A)

WHEREAS, Wm. F. Doyle, for Chris. Cunningham, owner, filed, August 7, 1925, an appeal, with the board of standards and appeals, from a decision of the superintendent of buildings, affecting premises foot of Greenpoint avenue and Newtown Creek, Borough of Brooklyn; and

WHEREAS, the decision of the superintendent of buildings, re: Applic. No. 1253-1925, reads:

MINUTES

"All storage tanks comprising or forming a part of an oil storage plant shall be buried so that the tops thereof shall be at least two feet below grade level as per Sec. 111, Sub. Div. 5 of Art. 8 of Chap. 10 of the Code of Ordinances.";

and

WHEREAS, the premises consist of a plot of ground, on Greenpoint avenue and Newtown Creek, on which it is proposed to locate eleven (11) gasoline and kerosene storage tanks of varying capacity from 17,200 gallons to 100,400 gallons, and three (3) 4,200 gallons filling tanks; the entire storage plant being enclosed in a 12 in. concrete wall; and

WHEREAS, appellant contends that it is impossible to bury the tank and that the enclosure surrounding the tank will hold the entire contents of a group of tanks; and

WHEREAS, a committee of the board visited the premises and recommended the granting of this appeal on certain conditions.

Resolved, that the decision of the superintendent of buildings be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the total gasoline storage permitted on these premises shall not exceed 450,000 gallons, subdivided into individual tanks, the capacity of which shall not exceed 75,000 gallons each; that each gasoline storage tank shall be provided with a reservoir constructed of reinforced concrete, with a capacity of not less than 75 per cent of the capacity of the tank enclosed; that the gasoline tanks shall be separated by reinforced concrete wall, erected to the height of the top of the tank, with return buttress at either end at a rake of 45 degrees; that the gasoline storage shall be set back from the Greenpoint avenue front at least 25 ft.; that a reinforced concrete wall to a height of top of tanks shall be erected on this line throughout the length of the gasoline storage; that the space of 25 ft. running parallel with Greenpoint avenue shall be restricted to the occupancy of mechanical equipment—office and building structures incidental to the conduct of the plant and with such other oil storage of low flash point; that the concrete wall of street front shall be at least 10 ft. high and the wall running parallel with Greenpoint avenue on rear of premises shall be at least 10 ft. high; if enclosing tank storage, this wall shall be to the height of top of tanks; that the tanks shall be equipped with foamite fire extinguishing system for which adequate pumping machinery shall be provided; also steam system for which adequate pumping machinery shall be provided; that gate valves and check valves and fire line shall be provided; that the bulkhead along the line of Newtown Creek shall be raised to a height of 2 ft. above the grade to prevent oil from running into creek; that return drawings of the proposed layout in accordance with the foregoing resolution shall be made to this board for approval before submission to the fire department for approval; and that all necessary permits shall be obtained.

BUILDING ZONE CASES.

785-25-BZ.

APPLICANT—William Kampel, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection of a building to be occupied for a business use (stores).

PREMISES AFFECTED—1893 Clinton avenue, The Bronx.

THE RESOLUTION:

(785-25-BZ)

WHEREAS, William Kampel, owner, filed, July 29, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a building to be occupied for a business use (stores); premises 1893 Clinton avenue, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 1, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Clinton avenue and Fairmount place are both in residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered July 10, 1925, reads:

"Application, N. B. 1450-25, is disapproved with the following objections, viz.:

"1. The erection of a business building in the residence district is contrary to the Building Zone Resolution.";

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 98 ft. 10 3/4 in. and a depth of 50 ft. 5 1/2 in.; to be occupied as stores; and

WHEREAS, there was opposition to the granting of this application on the part of adjoining property owners and the board deemed that there was no basis for the application under section 21.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

436-25-BZ.

APPLICANT—John J. Dunnigan, for Joseph Puglesi, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the alteration and extension of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—117-119 Carroll street, Brooklyn.

APPEARANCES—

THE RESOLUTION:

(436-25-BZ)

WHEREAS, John J. Dunnigan, for Joseph Puglesi, owner, filed, April 22, 1925, an application, under the building zone resolution, to permit in a residence district the alteration and extension of a garage for the storage of more than five motor vehicles; premises 117-119 Carroll street, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 1, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Carroll street is in a residence district; that Hicks street is in a business district, and that President street is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered April 15, 1925, reads:

"Proposition contrary to the Zone Resolution, Art. 2, Sec. 6a. Altering and extending a public garage for

MINUTES

more than five motor vehicles in a residential district.”; and

WHEREAS, the existing building is of non-fireproof construction, two stories in height, with a frontage of 25 ft. and 50 ft., irregular and a depth of 90 ft. and 65 ft., irregular; occupied as a garage for the storage of more than five motor vehicles; it is proposed to erect a one-story rear extension 10 ft. by 25 ft. and a one-story front extension 25 ft. by 30 ft.; and

WHEREAS, the applicant has filed 92 per cent consents of the area deemed affected and fixed by the board under section 7-G.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building to be erected shall not exceed a one-story structure in height above grade; that the gable walls shall be unpierced throughout their entire height and length; that the front elevation shall be finished in the same material as to color, texture and design as the main building; that all permits necessary for the prosecution of the work shall be obtained within six (6) months and the building completed within twelve (12) months from the date of this action.

596-25-BZ.

APPLICANT—John J. Dunnigan, for Biograph Company, Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the extension of an existing business building (studio).

PREMISES AFFECTED—807 East 175th street, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.

Negative	0
Absent	0

THE RESOLUTION:

(596-25-BZ)

WHEREAS, John J. Dunnigan, for Biograph Company, Inc., owner, filed, June 10, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a business building; premises 807 East 175th street, north side 147 ft. west of Marmion avenue, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 1, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 175th street, Marmion avenue and East 176th street are all in residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered June 4, 1925, reads:

“2. Proposed erection of business building inside residence district contrary to Sec. 3, Zone Resolution.”; and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 112 ft. and a depth of 221 ft. 8 in.; to be occupied as a motion picture studio and business building as an extension of the existing building and use on adjoining lot; and

WHEREAS, there was no opposition to the granting of this application on the part of the adjoining property owners, and in view of the fact the proposed building is merely an extension to a long existing use.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the height of the proposed addition shall not be erected higher than the existing structures on 176th street and 175th street of the same plant; that the front elevation shall be finished in the same design and with the same material, both as to color and texture as the adjoining premises, which is part of the same plant on 175th street; that there shall be no vehicular exit or entrance on the street frontage of this proposed extension; that the gable wall shall be finished with light color face brick throughout the entire height, and shall be unpierced other than one exit door on the ground floor, within its own property line, with egress to the premises to the rear in the same ownership; that there shall be no signs erected or displayed on any part of this structure on the 175th street front; all permits necessary for the prosecution of the work shall be obtained within nine (9) months and the building completed within eighteen (18) months from the date of this action.

405-25-BZ.

APPLICANT—Magnuson & Kleinert, for Fifteenth Street Amusement Co., owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a residence district the erection and maintenance of a building to be used for theatre and store purposes.

THE RESOLUTION:

(405-25-BZ)

WHEREAS, Magnuson & Kleinert, for 15th Street Amusement Company, R. Sanders, president, owner, filed, April 15, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a building to be used for theatre and store purposes; premises 187-8-9 Prospect Park West, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 1, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Prospect Park West is in a residence district; that 14th street is in a residence district and that 15th street is in a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered March 31, 1925, reads:

“The erection of stores and a theatre in a residential district is contrary to Article II, Section 3, of the Zone Resolution.”;

and

WHEREAS, the proposed building is of fireproof construction, one story and balcony in height, with a frontage of

MINUTES

60 ft. $\frac{1}{4}$ in. and a depth of 140 ft.; to be occupied as a theatre and stores, replacing an existing theatre building; and

WHEREAS, there was vigorous objection to the granting of this extension on the part of neighboring property owners.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

AREA FIXED. (979-25-BZ)

The chairman presented and read a communication from McCooey & Conroy, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises 144-18 Hillside avenue, Borough of Queens.

The following area was approved by the board:

Both sides of Hillside avenue from a point 100 ft. east of Colonial avenue (146th street) to a point 400 ft. west of proposed garage; west side of Colonial avenue (146th street) from Hillside avenue to Willett avenue (88th avenue); the north side of Willett avenue (88th avenue) from Colonial avenue (146th street) to a point 306.76 ft. west of Colonial avenue (146th street); also the east side of Kaplan avenue (144th street) from Hillside avenue to a point 200 ft. south of Hillside avenue.

Adjourned 5.40 p. m.

THE RESOLUTION:

(1477-24-S)

WHEREAS, Samuel Rosenblum, for 132 West 36th Street Corp., owner, filed, December 16, 1924, a petition, with the board of standards and appeals, for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 132-138 West 36th street and 139-45 West 35th street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 59254-LD, dated May 8, 1924, reads:

“1. Replace all wood partitions on all stories with partitions of incombustible material as per Sections 263 and 270 of the labor law.”;

and

WHEREAS, the building is fireproof, 12 stories in height, facing on two streets, 75 ft. by 187 ft. (irregular) in area; OCCUPIED as furniture show room, offices and 25 per cent of the 5th, 7th, 10th, 11th and 12th stories (only) for the manufacture of clothing, 298 persons above the 1st story; EQUIPPED with a sprinkler system. EXITS: An interior fireproof stairway extending from 1st story to roof, enclosed in fireproof partitions with fireproof doors at openings; ROOFS of adjoining buildings to east and west six stories lower; and

WHEREAS, petitioner contends that all of the permanent partitions on the premises are fireproof and that the partitions in question do not obstruct any means of egress and are, in most cases, dwarf partitions enclosing offices and show rooms; and

WHEREAS, this petition was denied by the board at its meeting February 24, 1925, and petitioner requested a reopening of the case, proposing to provide additional means of egress.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted on condition* that an exterior screened stairway shall be erected on easterly wall at junction of two sections, extending from rear of public hall on 1st story to roof, screened to a height of 5 ft., standard in all other respects; all doors and openings to be made fireproof and self-closing; the interior wooden partitions other than those enclosing showrooms and offices to be removed; the uppermost 18 in. of partitions shall be of plain glass; and *granted* so long as conditions as to occupancy and use remain substantially unchanged.

*Correction—Word “westerly” changed to “easterly” in line 36 of resolution.

MINUTES

*CORRECTION.

The minutes of the meeting of the board of standards and appeals, held Tuesday afternoon, November 10, 1925, as they appeared in Bulletin No. 44, Vol. X, are hereby corrected to read as follows:

THE RESOLUTION:

(754-25-BZ)

WHEREAS, Robert Tappan, for Cord Meyer Development Company, owner, filed, July 20, 1925, an application, under the building zone resolution, to permit in a residence district the erection and maintenance of a group of 26 one-car attached garages, for the storage of pleasure motor vehicles, as an accessory to private dwellings located within the same block; PREMISES north side of Austin street, bounded by Puritan avenue and Atom place, Forest Hills, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, November 10, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Austin street, Atom place and Puritan avenue are in residence districts, and that Queens boulevard is in a business district; and

WHEREAS, the decision of the superintendent of buildings, rendered June 30, 1925, reads:

"Erection of these buildings is contrary to the zone law, Art. 2, Sec. 3.

"Building proposed is for use not allowed except when same is accessory to dwelling on same lot.

"The number of cars to be provided is greater than allowed for an accessory use.";

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 10 feet and a depth of 20 feet, to be occupied as a group of 26 one-car attached garages, for the storage of pleasure cars, as an accessory to private dwellings located within the same block; and

WHEREAS, applicant filed 94.5 per cent of consents in support of his basis of appeal under rules of exception, section 7-g of the building zone resolution, and the board deemed it would be an unnecessary hardship, within the meaning of section 21, to deprive applicant of the privilege of developing his property as proposed for the accommodation of the fee owners and as accessory use thereto, under conditions which would safeguard and protect adjacent or affected properties.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the garage use shall be limited to twenty-six (26) individual garages, not exceeding a width of 8 ft. 4 in. each, interior dimensions, and a depth of 20 ft., subdivided by walls of approved masonry, the use and occupancy to be maintained as accessory to private residences in fee ownership, located within the block bounded by Austin street, Atom place, Puritan avenue and Queens boulevard; that there shall be no signs of any nature or description exposed or maintained on the premises; that there shall be no gasoline storage equipment installed on any part of the square block within the residence area; that the garage use be restricted to storage of automobiles of the pleasure car type, the property of owners or occupants of the residences within the block above described and accessory thereto; that the exterior of the buildings shall be finished in face brick in general harmony with the exterior of the private residences on the street frontages within the square block aforesaid; that all permits necessary for the prosecution of the work shall be obtained within nine months and the buildings completed within eighteen months from the date of this action.

**Correction—Word "united" omitted in line 47 of resolution and word "that" added in line 56.*

CONCRETE RULES

USE OF HYDRATED LIME IN CONCRETE.

Adopted by the Board of Standards and Appeals, April 19, 1920, under Cal. No. 153-20-S.

The use of hydrated lime in all classes of concrete construction shall not be prohibited when used in accordance with the conditions hereinafter set forth.

The hydrated lime shall conform with the standard specifications for this material which have been adopted by the American Society for Testing Materials.

The maximum amount of hydrated lime which may be used shall conform with the following table, all weights given being the amount of lime which may be incorporated for each ninety-five pound bag of Portland cement.

1-1½-3 Mix, 4 pounds of hydrated lime per bag of cement.

1-2-4 Mix, 5 pounds of hydrated lime per bag of cement.

1-2½-5 Mix, 6 pounds of hydrated lime per bag of cement.

For hand mixed concrete, the hydrated lime and Portland cement shall be well mixed while dry.

Hydrated lime shall not be used in concrete which is to be deposited under water.

Copies of the Electrical Code are now on sale at the Distributing Division of the City Record Office, 125 street. Price, 30c; by mail, 35c.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Tuesday, December 22, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

(b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

(a) For Standard one-half (½) inch heads—

8 feet in 12 foot bays;
9 feet in 11 foot bays;
10 feet in 10 foot bays;
11 feet in 9 foot bays;
12 feet in 5 to 8 foot bays;

(b) For Conran* one (1) inch heads—

20 feet in 5 to 12 foot bays.

(c) For Conran* one and one-quarter (1¼) inch heads—

25 feet in 5 to 12 foot bays.

(d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof.

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 " "	2 heads
$1\frac{1}{4}$ " "	3 " "
$1\frac{1}{2}$ " "	5 " "
2 " "	10 " "
$2\frac{1}{2}$ " "	20 " "
3 " "	36 " "
$3\frac{1}{2}$ " "	55 " "
4 " "	80 " "
5 " "	140 " "
6 " "	200 " "
7 " "	300 " "
8 " "	420 " "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ " "	2 heads
$1\frac{1}{2}$ " "	3 " "
2 " "	4 " "
$2\frac{1}{2}$ " "	6 " "
3 " "	9 " "
4 " "	18 " "
5 " "	34 " "
6 " "	51 " "
7 " "	75 " "
8 " "	105 " "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ " "	2 heads
2 " "	3 " "
$2\frac{1}{2}$ " "	4 " "
3 " "	6 " "
4 " "	12 " "
5 " "	21 " "
6 " "	40 " "
7 " "	60 " "
8 " "	84 " "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flow-ing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads.128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests].* Before acceptance all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employes instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before the board—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of the board, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of the board is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

BOARD OF STANDARDS AND APPEALS

WILLIAM E. WALSH, Chairman

Commissioners

HENRY L. CONNELL

JOSEPH FLANAGAN

JOHN GUILFOYLE

FIRE CHIEF JOHN KENLON

JAMES O'CONNOR, *Secretary*

EDWARD V. BARTON, *Chief Clerk*

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board

PUBLIC HEARINGS

Tuesdays, at 10 a. m. and 2 p. m.
Special meetings as published in this Bulletin.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
All hearings are held in Room 1013, Municipal Building Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of the board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The *Clerk's Calendar* consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, December 15, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, December 22, 1925, at 2 o'clock.

The *Clerk's Calendar* is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, *Chairman*.

THE RESOLUTION:

(699-25-A)

WHEREAS, McCooley & Conroy, for 212 6th Street, Inc., owner, filed, July 3, 1925, an appeal, from an order of the fire commissioner, affecting premises 212-214 East 6th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated May 5, 1925, No. 29377-LC, reads:

"1. Separate the garage from the remainder of the building in the manner prescribed by Section 73-3, Chapter 5, Code of Ordinances, by approved fire retarding material as prescribed by the Rules of the Board of Standards and Appeals. (See Vol. 2, No. 33, Page 620, Bulletin of the Board of Standards and Appeals, September 6th, 1917, and Vol. 2, No. 45, Page 795, November 8, 1917.)";

and

WHEREAS, the building is non-fireproof, two stories in height, 50 ft. by 97 ft. in area at 1st story and 50 ft. by 50 ft. above. OCCUPIED: 1st story, stores, office and garage for the storage of two motor trucks; 2nd story, billiard parlor; and

WHEREAS, the appellant claims that the driveway on 1st story at east side is used as a garage for the storage of two trucks used in connection with his business; that said

MINUTES

garage is enclosed on both sides with brick walls, the ceiling is covered with plaster board and No. 26 gauge metal; that the inner end is the only part open to the other parts of the building; that there is a platform about 3 ft. higher than the floor of the garage at the inner end of the garage, for the purposes of loading trucks; that no gasoline storage is on the premises.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the stairhall of 1st story shall be fire retarded in accordance with the rules of the board of standards and appeals, with egress directly to street; no opening to be permitted from said hallway at 1st floor level; that not more than two (2) automobiles, the property of the owner of the premises, used in the conduct of his business, shall be stored on the premises at any time; there shall be no gasoline storage equipment permitted on the premises; that the floor space occupied for garage runway shall be finished with cement concrete; that the bulkhead of automobile runway end and sides shall be built up, with not more than one opening at end of runway, equipped with an approved self-closing metal door; and *on further condition* that the 1st story and cellar use shall be restricted to the storage and conduct of plumbing supplies and fixture business.

727-25-A.

APPELLANT—Jno. B. Snook Sons, for Bernhard Ullman Co., Inc., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—28-30 Greene street, Manhattan.

APPEARANCES—

For Appellant: John W. Boylston.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Commissioners
Connell, Flanagan, Guilfoyle and Fire
Chief Kenlon 5

Absent 0

THE RESOLUTION:

(727-25-A)

WHEREAS, Jno. B. Snook Sons, for Bernhard Ullman, Inc., lessee, filed, July 9, 1925, an appeal from an order of the fire commissioner, affecting premises 28-30 Greene street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated June 17, 1925, No. 80157-F, reads:

"1. Install a standpipe system with risers 4 inches in diameter * * *, placed within main stairway enclosure."

and

WHEREAS, the building is non-fireproof, six stories (93 ft.) in height, 49 ft. 1 in. by 95 ft. in area at 1st story and 49 ft. 1 in. by 87 ft. above. OCCUPIED: 1st story, shipping, 12 persons; 2nd story, stock, 6 persons; 3rd story, packing, 25 persons; 4th story, manufacturing embroidery, 15 persons; 5th story, sewing, 50 persons; 6th story, cutting, 8 persons; and

WHEREAS, the appellant claims that the building is now being equipped with a two-source sprinkler system; that it is equipped with a fire alarm signal system; that it is provided with a fire line on outside of the building extending from sidewalk to roof with outlets at each story; that it is also provided with legal exit facilities.

Resolved, that the order of the fire commissioner be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

798-25-A.

APPELLANT—Rudolph P. Miller, for Ibhal Realty Co., Inc., owner.

THE RESOLUTION:

(798-25-A)

WHEREAS, Rudolph P. Miller, for Ibhal Realty Co., Inc., owner (Harry A. Lanzer, treasurer), filed, August 3, 1925, an appeal from an order of the fire commissioner, affecting premises 241-255 Haven avenue and 737-741 West 177th street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 82189-F, dated July 17, 1925, reads:

"1. Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per sq. in. extending from cellar to roof, with necessary check valves and 2½ inch regulation Fire Department outlets on each story * * *";

and

WHEREAS, the building is non-fireproof, six stories (62 ft. 1 in.) in height, 175 ft. 4 in. by 103 ft. in area; OCCUPIED as an apartment house; 12 families on each story; and

WHEREAS, the appellant contends that in the adoption of section 581 of the code requiring standpipes in buildings over 10,000 sq. ft. in area, the framers of the law had no intention of applying such requirement to residence buildings, that there was no need of making a specific exemption at that time as apartment houses were not being erected of such large areas; and

WHEREAS, it appears that the building faces on two streets, that the rear is accessible from rear yard, and that by means of 8 in. interior walls the building is subdivided into sections, each less than 10,000 sq. ft. in area, and that other enclosing walls within the building provide a substantial barrier against spread of fire.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that no single fire area shall exceed 5,000 sq. ft.; that a public corridor shall be provisioned and maintained on each story throughout building and from the apartments at either end of building with 8 in. walls of approved masonry; that all openings in and to corridors shall be provided with self-closing fireproof doors; and that the building shall not exceed a height of 63 ft. from curb level.

THE RESOLUTION:

(1061-25-A)

WHEREAS, George Fred Pelham, for Marcus Brown Construction Company, owner, filed, October 19, 1925, an appeal from a decision of the superintendent of buildings, affecting premises 441 West End avenue, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered October 15, 1925, reads:

"Fuel oil storage tank should be buried below floor of lowest story (Rule 3a)."; and

WHEREAS, the building is fireproof, 15 stories in height, 102 ft. 2 in. by 92 ft. 2 in. in area; OCCUPIED as a tenement house, three apartments on each story; and

WHEREAS, the appellant proposes to install a fuel oil burning system for heating purposes in strict accordance with the fuel oil rules, with the exception of the storage tank of 7500 gallons capacity, which is proposed to set 4 ft. 2½ in. above the boiler room floor, enclosed in brick walls, 12 in. in thickness, and provided with a reinforced concrete cover 8 in. thick, using grade "A" oil.

Resolved, that the decision of the superintendent of buildings be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the fuel oil storage tanks shall be installed in accordance with rule 3 of the fuel oil rules; that a clear space of not less than 12 in. shall be maintained between tank enclosure walls and the exterior of the boiler or heating apparatus; that the capacity of any individual tank shall not exceed 7500 gallons; that the fuel oil installation shall comply with the rules of the board of standards and appeals in all other respects.

THE RESOLUTION:

(587-25-A)

WHEREAS, Han. A. Kuntz, for Cornell Vacuum Burner Co., for Long Island Star Publishing Co., owner, filed, June 8, 1925, an appeal from a decision of the fire commissioner, affecting premises 9 Radde street, Long Island City, Borough of Queens; and

WHEREAS, the decision of the fire commissioner, dated June 3, 1925, reads:

"1. Tank must be tested in presence of Fire Department representative.

"2. Burners must be of a type approved by the Board of Standards and Appeals."; and

WHEREAS, the building is fireproof, five stories in height, 68 ft. by 100 ft. in area; OCCUPIED as a publishing house; about 25 persons on each story; and

WHEREAS, a fuel oil burning system has been installed consisting of a fuel oil storage tank of approximately 2500 gallons, located in the boiler room, connected with a Cornell oil burner, using grade "A" oil; and

WHEREAS, the appellant claims the system has been operating satisfactorily for three years; that the storage tank is inaccessible; that similar objections have been previously passed by the board, permitting the use of this particular burner, he requests the board to permit the operation of this fuel oil system to continue.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, as to Item 1, *on condition* that a certificate of factory test shall be filed with the fire commissioner; as to Item 2, *on condition* that the fire-box of the boiler shall be equipped with self-closing device; and that the installation of the fuel oil burning equipment shall comply with the fuel oil rules in all other respects.

THE RESOLUTION:

(267-25-A)

WHEREAS, Fox and Weller, for The Hanover Fire Insurance Company, owner, filed, March 9, 1925, an appeal from an order of the fire commissioner, affecting premises 34-38 Pine street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated January 27, 1925, reads (Order No. 71072-F):

"1. PROVIDE approved fireproof windows, with metal or kalameined frames, glazed with wired glass for all openings in the exterior wall above the 1st story, which are distant in a direct line less than 30 ft. from any opening in any other building and not in the same plane with said openings and which are not more than 50 ft. above a neighboring roof at east and north sides of building, or other approved protection as per Section 375, Article 18, Chapter 5 of the Code of Ordinances.";

and

WHEREAS, the building is fireproof, 14 stories in height, 63 ft. 1 in. by 63 ft. 6 in. in area at the 1st story; OCCUPIED as an office building; about 30 persons on each story; and

WHEREAS, the appellant claims there are 68 windows in the north side of the building and 32 windows on the east side which are affected; that most of the windows are $\frac{1}{4}$ in. plate glass in hollow metal frames; he further contends that no hazard would be incurred if the order were reversed.

Resolved, that the order of the fire commissioner be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

THE RESOLUTION:

(696-25-BZ)

WHEREAS, William F. Doyle, for Osbruck Realty Company, owner, filed, July 3, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises northwest corner of Grandview avenue and Ralph street, Ridgewood, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 8, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Grandview avenue is in a business district; that Ralph street is in a business district, and that Bleecker street is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered June 29, 1925, reads:

"1. Erection of a public garage for more than five cars is forbidden in business district. Not examined further.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 150.13 ft. and a depth of 99.45 ft. and 101.89 ft., irregular; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, there are other prohibited uses in the street, and applicant has made reasonable effort to secure 80 per cent of consents as provided in section 7-g of the zone resolution; and

WHEREAS, the board concluded that there would be practical difficulties and unnecessary hardship in the way of carrying out the strict letter of the zoning resolution, and applicant should be granted relief under section 21.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building be restricted in height to a one-story structure; that there shall be no vehicular entrance on Grandview avenue; that any gasoline storage equipment installed shall be located to the northerly end of the building at the Ralph street front; that there shall be no signs or advertising permitted on the Grandview avenue front, other than one projecting electric sign indicating the title of the garage; that the rear and gable walls shall be unpierced throughout their entire height and length; that the street front elevations shall be finished in face brick, with architectural terra cotta or stone trimmings; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

523-25-BZ.

APPLICANT—Albert Wald, for Park Avenue Improvement Co., Inc., lessee.

SUBJECT—Application (re: order of tenement house commissioner) under section 7, subdivisions b and c, of the building zone resolution to permit in a residence district extending from a business district the maintenance of a business use.

PREMISES AFFECTED—320-330 Park avenue, Manhattan.

THE RESOLUTION:

(523-25-BZ)

WHEREAS, Albert Wald, for Park Avenue Improvement Company, Inc., lessee, filed, May 20, 1925, an application, under the building zone resolution, to permit in a residence district, extending from a business district, the maintenance of a business use; premises 320-330 Park avenue, Borough of Manhattan; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 8, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Park avenue is in a residence and business district; that East 51st street is in a residence district, and that East 50th street is in a business district; and

WHEREAS, the order of the tenement house commissioner, dated December 27, 1924, reads:

"The 2 rooms at south of 2nd entrance door from north on Park Ave. side of building are used and occupied for business. The use of said apartment for business purposes must be discontinued forthwith and the building permanently used for residential purposes only.";

and

WHEREAS, the existing building is of fireproof construction, 12 stories in height, with a frontage of 200 ft. 3¾ in. and a depth of 79 ft. and 75 ft. ⅛ in., irregular; to be occupied as office and residence; applicant proposes to use two rooms on ground floor, south of 2nd entrance door from north for office purposes in connection with jewelry business; and

WHEREAS, the board deemed that the applicant was entitled to relief under section 7-c of the building zone resolution and also that there would be practical difficulties and unnecessary hardship in the way of carrying out the strict letter of the zoning resolution.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted, only so far as it affects the single suite of two rooms, occupied by one Moubassin, the present tenant, for a temporary period not to extend beyond September 30, 1927, on condition that there shall be no structural alteration or change of any description on the exterior or interior of this suite; that there shall be no commercial, store or business fixtures installed or maintained in the portion of the premises under appeal; equipment to be restricted to desks, chairs and such furniture as is appurtenant to the equipment, use and occupancy of executive offices; that there shall be no outward display

MINUTES

other than a single brass or bronze flat sign, limited in area to 14 inches square, erected immediately outside of the street door entrance to this suite; that there shall be no other sign or advertising of any nature or description permitted within this area.

THE RESOLUTION:

(791-25-BZ)

WHEREAS, McCombs & Ryan, for George C. Schwalb, owner, filed, July 31, 1925, an application, under the building zone resolution, to permit in a residence district the alteration and enlargement of a garage for the storage of more than five motor vehicles; premises 619-625 Hancock street, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 8, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Hancock street is in a residence district; that Reid avenue is in a business district, and that Jefferson avenue is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered July 13, 1925, reads:

"2. Extension of business building prohibited within residential district. Art. II, Sec. 3, Sec. 6 (a) of Zone Resolution.";

and

WHEREAS, the existing building is of fireproof construction, two stories in height, with a frontage of 75 ft. and a depth at 1st story of 100 ft. and at 2nd story of 31 ft. 8 in.; to be occupied as a garage for the storage of more than five motor vehicles; applicant proposes to extend the 2nd story over the entire lot area, the size of proposed new portion is 75 ft. by 68 ft. 4 in.; the entire building to be used for garage purposes; and

WHEREAS, a permit was issued by bureau of buildings and building erected with the exception of rear portion, 2nd story, prior to the enactment of the building zone resolution, and the board deemed that applicant established his basis of appeal under section 21 and that there would be practical difficulties and unnecessary hardship in the way of carrying out the strict letter of the zoning resolution.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted, only so far as it affects the completion of the rear portion of the 2nd story in accordance with the original plan submitted and permit

issued by the superintendent of buildings, on condition that the rear and gable walls of the addition shall be unpierced throughout their entire height and length; that no skylight shall be installed within 20 ft. of the rear or gable walls, any skylights installed to be glazed with plain glass and protected above and below with wire guards; that there shall be no advertising signs erected or maintained on the building, any advertising display shall be restricted to the plate glass office windows of the 1st story; that there shall be no portable gasoline tanks permitted outside the structure; that any existing gasoline storage equipment shall not be increased; that there shall be no machine shop conducted on the premises; any repair work shall be limited to that incidental to the conduct of a public garage; that there shall be no motor-driven machinery permitted on the premises, other than a one-half horsepower electric drill; that the front of the building as it now exists shall not be changed or altered in any manner; that all permits necessary for the prosecution of the work shall be obtained within nine months and the alteration completed within twelve months from the date of this action.

THE RESOLUTION:

(630-25-BZ)

WHEREAS, David J. Stewart, for Edward H. Litchfield, owner, filed, June 17, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 305-11 3rd street, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 8, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that 3rd street is in a business district on the north side and in a residence district on the south side; that 2nd street is in a business district, and that 4th avenue is in a business district on the east side and in an unrestricted district on the west side; and

WHEREAS, the decision of the superintendent of buildings, rendered May 4, 1925, reads:

"Proposition contrary to the Zone Resolution, Art. II, Sec. 4 a, 15.

"The erection of a garage for more than five motor vehicles in a business district.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 80 ft. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, applicant has filed 82 per cent of consents of affected property owners, as provided under section 7-g of the zoning resolution; and

WHEREAS, the board concluded that there would be practical difficulties and unnecessary hardship in the way of carrying out the strict letter of the zoning resolution.

Resolved, that the board of standards and appeals does hereby make a variation in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is granted on condition that the building be restricted to a one-story structure in height, above grade; that the rear and gable walls shall be unpierced throughout their entire height and length; that a fixed double-rung iron ladder shall be provided at the rear of the building to a scuttle in the roof; that the front elevation shall be finished in face brick, with architectural terra cotta or stone trimmings; that there shall be no signs erected or maintained on the premises, any advertising display to be restricted to the frieze between the door-heads and the coping, on the front of the building; that the facade shall be erected substantially in accordance with the design of the elevation as filed in this appeal; that any gasoline storage equipment installed shall be located approximately at the center of the building at the street front; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

504-25-BZ.

APPLICANT—William F. Doyle, for D. Coppersmith, owner.

SUBJECT—Application (re: decision of superintendent of buildings) under sections 7-g and 21 of the building zone resolution to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—128-144 East 98th street, Brooklyn.

APPEARANCES—

For Applicant: William F. Doyle and A. I. Nova.

For Opposition: Walter R. Kuhn, Stanley S. Smith and A. Forman.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Martin..

THE RESOLUTION:

(504-25-BZ)

WHEREAS, William F. Doyle, for D. Coppersmith, owner, filed, May 13, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises west side of East 98th street, 100 ft. north of Winthrop street, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 8, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 98th street is in a business district and that Rockaway parkway is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered May 4, 1925, reads:

"Proposition contrary to the Zone Resolution, Art. 2, Sec. 4a, 15.

"The erection of a public garage for more than five motor vehicles in a business district.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 150 ft. and a depth of 120 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

MINUTES

WHEREAS, the applicant has made a reasonable effort to secure the 80 per cent of consents as provided in section 7-g of the zone resolution, and the board concluded that there would be practical difficulties and unnecessary hardship in the way of carrying out the strict letter of the zoning resolution.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building shall be restricted to a one-story structure above grade; that the rear and gable walls shall be unpierced throughout their entire height and length; that a fixed double-rung iron ladder shall be provided at the rear wall of the building to a scuttle in the roof; that the front elevation shall be finished in face brick, with architectural terra cotta or stone trimmings; that there shall be no signs erected on the premises, other than one electric, projecting sign on the front of the building, and any other advertising to be restricted to the show window store fronts; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

1514-23-BZ.

APPLICANT—John De Hart, for Morris Saskowitz, owner.

SUBJECT—Application for modification of resolution adopted by board October 3, 1924, to permit a non-fireproof garage occupancy throughout the entire premises.

PREMISES AFFECTED—75 First avenue, Manhattan.

APPEARANCES—

For Applicant: John De Hart.

For Opposition: None.

ACTION OF BOARD—Application to modify resolution denied.

THE VOTE TO GRANT MODIFICATION—

Affirmative: Commissioner Guilfoyle 1

Negative: Chairman Walsh, Commissioners
Connell, Flanagan and Fire Chief Martin .4

Absent 0

THE RESOLUTION:

(1514-23-BZ)

WHEREAS, Morris Saskowitz, owner, filed, December 23, 1923, an application, under the building zone resolution, to permit in a business district the extension and change of occupancy of the 2nd, 3rd and 4th stories of a building from storage to a garage for the storage of more than five motor vehicles; premises 75 First avenue, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of appeals, at its special meeting, October 3, 1924, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that First avenue, East 4th street and East 5th street are business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered December 19, 1923, reads:

"Your application for certificate of occupancy filed December 6, 1923, for garage in entire building is hereby denied for the following reasons:

"Garage in basement and 1st floor was granted by the Board of Appeals, Cal. 7-21-BZ and extension of the garage occupancy is prohibited by the Building Zone Resolution, the building being in a business district.";

and

WHEREAS, the building is of non-fireproof construction, four stories in height, with a frontage of 24 ft. $\frac{1}{2}$ in. and a depth of 100 ft.; occupied as garage in the basement and 1st story and furniture storage above; it is proposed to occupy the entire structure as a garage; and

WHEREAS, the applicant has filed the duly acknowledged consents of the owners of 83 per cent of the property frontage deemed by the board to be affected; and

WHEREAS, this application was granted by the board at its meeting, October 3, 1924, on certain conditions, and present owner, through his architect, John De Hart, requests a modification of these conditions; and

WHEREAS, the following brief summary of the action of the board on these premises was submitted to the board:

Under Cal. No. 7-21-BZ, it was brought out that the premises were then occupied as a stable on the first and basement stories, the second to fourth stories, inclusive, being occupied for storage, and the Board *granted a permit* to convert the first story and basement from a stable to a garage for more than five motor vehicles.

There exists a public school within 200 ft. in the rear extending from 4th to 5th Streets.

Under Cal. 368-21-BZ (June 7, 1921) a new application was presented to the Board for permission to convert from warehouse to garage from the second to the fourth stories, and this new application the Board unanimously *denied*.

Under date of May 31, 1922, this application was again renewed to permit the extension of the public garage existing in the basement and 1st story throughout the entire building, and the Board again unanimously *denied* that extension of use.

Under Cal. 1514-23-BZ, a new application was filed under section 7-g, supported by 83 per cent of consents within the area fixed by the Board, to permit the change of occupancy from storage to garage for the entire premises, and that was granted on condition that the entire premises be made fireproof.

That the fireproof requirement was known to and consented to by the attorney of record for the applicant is proved by the quotations from the stenographer's minutes of the hearing:

"The fireproof conditions adopted by the Board was, in its judgment, important and even imperative for the safeguarding of the adjoining tenement houses in this highly congested district, and those adjoining tenement houses are old law tenements, and there is a motion picture theatre within 24 feet on the same street front."

The Board had the most intimate knowledge of the situation at the time that resolution was adopted, because it had already considered several appeals affecting this same premises.

and

WHEREAS, the board deemed that no modification of the original resolution should be granted.

Resolved, that the original resolution of the board, reading, "that the board of appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the structure be erected fireproof throughout; that the building zone requirements as to rear yard and area restrictions shall be complied with in all respects; that the gable walls shall be unpierced throughout their entire height and length; that any gasoline storage equipment plant shall be installed at the extreme front of the building and confined to the 1st story; that the front elevation should be finished in light colored face brick; that there shall be not more than one projecting electric sign not over 10 ft. in height on the premises; that the structure shall not exceed four stories in height above grade; that there shall be no ramps installed, maintained or used in this building; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action," be *reaffirmed* and the application for modification be *denied*.

CASES DISMISSED.

BUILDING ZONE APPLICATIONS.

The chairman called attention to the following cases, where notice of intention to appeal was offered for filing, but where, despite notices from this office, papers have not been completed, thus tying the hands of the administrative official in the performance of his duty:

183-25-BZ.

APPLICANT—Everett M. Clark, lessee.

SUBJECT—Application (re: order of fire commissioner) to permit in a business district the use of the premises as a parking place for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—15-19 Lafayette avenue, Brooklyn.

APPEARANCES—None.

ACTION OF BOARD—Application dismissed.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Martin	5
Negative	0
Absent	0

643-25-BZ.

APPLICANT—Wilbur F. Earp, for Estate of Lambert S. Quackenbush, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit the erection and maintenance of a public garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—1762 Park avenue and 75 East 122nd street, Manhattan.

APPEARANCES—None.

ACTION OF BOARD—Application dismissed.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Martin	5
Negative	0
Absent	0

THE RESOLUTION:

(183-25-BZ)

(643-25-BZ)

WHEREAS, the foregoing applicants have filed with the board of standards and appeals application, under the building zone resolution, affecting the premises in question; and

WHEREAS, the applicants have failed to complete their papers, though duly notified to do so.

Resolved, that the applications be and they hereby are dismissed for lack of prosecution.

Adjourned 5.50 p. m.

JAMES O'CONNOR, *Secretary*.

BOARD OF STANDARDS AND APPEALS

REGULAR MEETING.

TUESDAY AFTERNOON, DECEMBER 8, 1925.

Present: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Deputy Fire Chief Martin.

PETITIONS FOR VARIATIONS.

743-25-S.

PETITIONER—Deiches, Goldwater & Flynn, for Duplex Motion Picture Industries, Inc., owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—125-129 Sherman street, Long Island City, Borough of Queens.

APPEARANCES—

For Petitioner: Maurice Deiches.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition laid over to December 22, 1925, at 2 p. m., on request of petitioner.

749-25-S.

PETITIONER—Margaret Murphy Drew, for Helen A. Wissmann, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—732 Broadway, Manhattan.

APPEARANCES—

For Petitioner: Margaret Murphy Drew.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition laid over to December 22, 1925, at 2 p. m., on request of petitioner.

675-25-S.

PETITIONER—John Street M. E. Church Trust Fund Society, owner.

SUBJECT—Variation of labor law as cited in orders of fire commissioner.

PREMISES AFFECTED—48 John street, Manhattan.

APPEARANCES—

For Petitioner: O. Powell.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition laid over to December 22, 1925, at 2 p. m., on request of petitioner.

406-25-S.

PETITIONER—Cullen & Dykman, for Acorn Insulated Wire Company, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—178-192 Sullivan street, Brooklyn.

APPEARANCES—

For Petitioner: Mr. Cullen.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition laid over to December 22, 1925, at 2 p. m., on request of petitioner.

198-25-S.

PETITIONER—Thomas B. Leahy, for 566-568 Seventh Avenue, Inc., owner.

SUBJECT—Variation of labor law as cited in letter of superintendent of buildings.

PREMISES AFFECTED—566-568 Seventh avenue, Manhattan.

APPEARANCES—

For Petitioner: Thomas B. Leahy.

ACTION OF BOARD—Petition laid over to December 22, 1925, at 2 p. m., on request of petitioner.

On motion, the following cases were laid over to December 29, 1925, at the session beginning at 10 a. m.:

728-25-S—48 West 22nd street, Manhattan.

734-25-S—87-9 Nassau street, 130 Fulton street, Manhattan.

774-25-S—501 Seventh avenue, Manhattan.

814-25-SA—Aetna Automatic Syphone Breaker, approval of
846-25-SA—K.F.C. Fuel Oil Burner, approval of.
683-25-SA—Billow Fuel Oil Burner, approval of.

Adjourned 6 p. m.

JAMES O'CONNOR, *Secretary*.

RULES

SMOKING IN FACTORIES.

Adopted by the Board of Standards and Appeals,
August 13, 1918.

RULE 1. PERMIT.

(a) **Prohibition.** No person shall smoke, or carry a lighted cigar or cigarette in any factory as defined in Article 1, Section 2, of the State Labor Law, nor in any portion of a factory, within the City of New York, except in such protected portions or special classes of occupancies as are specified in Rule 2 of these rules, and then only after the issuance of a permit by the fire commissioner.

It shall be the joint and several duty of the owner and of the lessee or lessees of the building containing such factory or factories to cause to be posted in each and every entrance hall, stairhall or room throughout the building, as well as in every elevator-car, in English, and also in such other language or languages as the fire commissioner shall direct, a notice of such prohibition, and the penalty for its violation.

(b) **Application.** Application for such permit shall be made only by the owner of the building on suitable blank forms to be furnished by the fire commissioner.

(c) **Time Limit.** Such permit shall be for a definite period, not exceeding one year, and shall not be renewed upon expiration until a reinspection of the premises for which it is issued has been made for the purpose of determining whether existing conditions warrant a renewal.

(d) **Conditions.** The permit shall state the conditions under which, the hours between which, and the place or places in such factory where smoking may be permitted, and this permit shall be framed and kept posted in a conspicuous place in the factory.

(e) **Revocation.** Violation of any of the conditions specified in the permit, in addition to incurring such penalties as are prescribed by law, shall be full and sufficient cause for the revocation of such permit by the fire commissioner, and he shall not again issue a permit for the same premises until at least one year has elapsed.

RULE 2. PERMISSIBLE CASES.

Smoking may be permitted in:—

(a) Factories engaged in the manufacture of cigars, cigarettes, or smoking tobacco, when necessary for the efficient conduct of the business, provided that:

(1) No smoking other than that for sampling, testing and experimental purposes is carried on.

(2) Such smoking is conducted in a room provided especially for that purpose, separated from the rest of the building by fireproof or fire-resisting partitions, with all openings therein protected by self-closing fire doors, and, further, unless the building is of fireproof construction or equipped with an approved automatic sprinkler system, the floor and ceiling of such room shall be covered with fire-retarding material.

(3) Such chemical fire extinguishers as the fire commissioner may direct are installed.

(4) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

(b) Factories devoted entirely to one of the following occupancies:

Blacksmithing or horseshoeing;
Boiler making;
Brick, terra cotta or artificial stone works;
Forge shops;
Foundries;
Iron, steel, brass or copper works;
Machine shops;
Smelting;
Stone or monumental works;

provided that in any case:

(1) The building is not of wooden construction;

(2) Such chemical fire extinguishers as the fire commissioner may direct are installed;

(3) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

RULES

FIRE RETARDING RULES

Adopted by the Board of Standards and Appeals August 30, 1917; Amended November 1, 1917.

Rule 1. Fire Retarding Materials for Garages, Motor Vehicle Repair Shops and Oil Selling Stations. In garages, motor vehicle repair shops and oil selling stations any material or form of construction shall be deemed fire-retarding within the meaning of §73, subdivision 3, of the building code, that resists the action of flame and heat when subjected to a continuous fire for one hour at an average temperature of seventeen hundred (1700) degrees Fahrenheit without the passage of flame, and with a maximum temperature rise to four hundred (400) degrees Fahrenheit on the side away from the fire. The point at which the temperature of transmitted heat is measured shall be protected from external air and weather conditions.

When the test specimen is in the form of partition construction, the area under test shall be not less than one hundred (100) square feet and least dimension shall be not less than nine (9) feet. When in the form of floor construction, the area under test shall be not less than two hundred (200) square feet and the least dimension shall be not less than fourteen (14) feet.

During the fire, the floor construction shall support the live load for which it is designed, and after the fire shall safely sustain twice the designed live load with a maximum deflection of not more than one two-hundredth (1/200) part of the span.

Rule 2. Wood Joisted Floor Construction. Wood joisted floor construction shall be accepted as fire-retarding construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations when the beams are protected on the upper and under sides with the fire-retarding materials specified in rules for floor and ceiling coverings.

Rule 3. Floor Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the upper sides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) Seven-eighths ($\frac{7}{8}$) inch wood underflooring protected with a membrane of two-ply waterproofing covered with not less than two and one-half ($2\frac{1}{2}$) inches of 1:2½:5 concrete or better, reinforced with not less than one-fourth ($\frac{1}{4}$) of one (1) per cent of steel mesh.

(b) Two and one-half ($2\frac{1}{2}$) inches of 1:2:4 concrete applied directly to the top of the joists, with or without temporary support, reinforced with not less than one-fourth of one per cent steel rods, mesh or steel lath, and having the tops of the joists coated with approved waterproof paint or protected by tar paper on the top and on the sides for a distance of three inches from the top. (Amendment, Nov. 1, 1917.)

Rule 4. Ceiling Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the undersides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) One-half ($\frac{1}{2}$) inch plaster boards, or three-eighths ($\frac{3}{8}$) inch gypsum wall boards weighing not less than 16 pounds per square yard with pointed joints covered with No. 26 U. S. gauge sheet metal with one (1) inch lapped seams nailed to the wood beams when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are spaced more than sixteen (16) inches on centers;

(b) Two thicknesses of one-quarter ($\frac{1}{4}$) inch asbestos board laid with tight staggered joints and nailed to the beams, when spaced not more than sixteen (16) inches on centers, or nailed to furring

strips when the floor beams are more than sixteen (16) inches on centers.

(c) Metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($\frac{3}{4}$) inch thick.

Rule 5. Attachment to Ceiling. Fire-retarding ceilings in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations shall be attached to wood floor beams and girders in such manner as to maintain an air space between the wood beams, and all wood beams shall be seasoned before applying the protective coat.

Rule 6. Openings in Fire-Retarding Floors. Pipes or conduits which pass through floors shall be fitted with metal thimbles and made watertight for a height of three (3) inches above the floor.

Rule 7. Columns. All structural posts and columns in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials accepted in fireproof construction; except that an air space shall not be required around steel or cast iron columns.

Where necessary for protection against mechanical injury, the fire-retarding protection on columns shall be jacketed to a height of five (5) feet from the ground with No. 4 U. S. gauge metal.

Rule 8. Girders. All girders in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials acceptable in fireproof construction; except that an air space need not be provided around steel girders.

Rule 9. Shaft Enclosures. Existing stairways and vertical shafts in non-fireproof business buildings hereafter converted to be used as garages, motor vehicle repair shops or oil selling stations shall be enclosed in fire-retarding partitions continued through the non-fireproof floor construction, and when unfilled wood stud partitions are used, the space between the floor beams shall be fire-stopped with incombustible materials. All openings in such partitions shall be protected with accepted metal-covered fire doors or windows. Wherever necessary for protection against mechanical injury, the partition shall be jacketed to a height of five (5) feet on the garage side with No. 4 U. S. gauge metal. Any one of the following forms of partitions shall be accepted for the enclosure:

(a) Two by four inch wood studs, spaced not more than sixteen (16) inches on centers, covered both sides with metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($\frac{3}{4}$) of an inch thick;

(b) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($\frac{7}{8}$) inch wood sheathing, one-half ($\frac{1}{2}$) inch plaster boards with pointed joints and No. 26 U. S. gauge sheet metal with one-inch lapped seams;

(c) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($\frac{7}{8}$) inch wood sheathing, two thicknesses of one-quarter ($\frac{1}{4}$) inch asbestos boards laid with tight staggered joints and jacketed with No. 16 U. S. gauge metal on the garage side to a height of five (5) feet.

(d) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, filled in solidly between the studs with four inches of approved fireproof materials and covered on both sides with No. 26 U. S. gauge metal;

(e) Existing wood stud, lath and plaster partitions covered on the garage side with No. 26 U. S. gauge sheet metal with one-inch lapped seams.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Tuesday, December 22, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent ($12\frac{1}{2}\%$) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds ($\frac{2}{3}$) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half ($1\frac{1}{2}$) inches in size [with a one and one-quarter ($1\frac{1}{4}$) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half ($1\frac{1}{2}$) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half ($\frac{1}{2}$) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] *two hundred (200)* feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half ($3\frac{1}{2}$) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half ($3\frac{1}{2}$) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half ($\frac{1}{2}$) inch pipe connection and one-half ($\frac{1}{2}$) inch orifice and a bronze ball of proper size, or by a three-quarter ($\frac{3}{4}$) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads—
 - 8 feet in 12 foot bays;
 - 9 feet in 11 foot bays;
 - 10 feet in 10 foot bays;
 - 11 feet in 9 foot bays;
 - 12 feet in 5 to 8 foot bays;

- (b) For Conran* one (1) inch heads—
 - 20 feet in 5 to 12 foot bays.

- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—
 - 25 feet in 5 to 12 foot bays.

- (d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half ($\frac{1}{2}$) inch head for each $62\frac{1}{2}$ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half ($\frac{1}{2}$) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half ($11\frac{1}{2}$) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half ($11\frac{1}{2}$) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof, sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half (1/2) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
3/4 inch	1 head
1 " "	2 heads
1 1/4 " "	3 " "
1 1/2 " "	5 " "
2 " "	10 " "
2 1/2 " "	20 " "
3 " "	36 " "
3 1/2 " "	55 " "
4 " "	80 " "
5 " "	140 " "
6 " "	200 " "
7 " "	300 " "
8 " "	420 " "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
1 1/4 " "	2 heads
1 1/2 " "	3 " "
2 " "	4 " "
2 1/2 " "	6 " "
3 " "	9 " "
4 " "	18 " "
5 " "	34 " "
6 " "	51 " "
7 " "	75 " "
8 " "	105 " "

(c) For Conran* one and one-quarter (1 1/4) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 1/4 inch	1 head
1 1/2 " "	2 heads
2 " "	3 " "
2 1/2 " "	4 " "
3 " "	6 " "
4 " "	12 " "
5 " "	21 " "
6 " "	40 " "
7 " "	60 " "
8 " "	84 " "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half (2 1/2) inch pipe does not supply more than sixteen (16) standard one-half (1/2) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half (1/2) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter (1 1/4) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a **main control or shutoff valve** arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads.128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor.].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, **such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.**

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being **meanwhile kept shut.** Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased *or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.*

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employes instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before the board—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of the board, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of the board is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

BOARD OF STANDARDS AND APPEALS

WILLIAM E. WALSH, Chairman

Commissioners

HENRY L. CONNELL

JOSEPH FLANAGAN

JOHN GUILFOYLE

FIRE CHIEF JOHN KENLON

JAMES O'CONNOR, Secretary

EDWARD V. BARTON, Chief Clerk

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board

PUBLIC HEARINGS

Tuesdays, at 10 a. m. and 2 p. m.
Special meetings as published in this Bulletin.
Call of Clerk's Calendar, Tuesdays, at 2 p. m.
All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of the board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, December 22, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, December 29, 1925, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman.

CONCRETE RULES

USE OF HYDRATED LIME IN CONCRETE.

Adopted by the Board of Standards and Appeals, April 19, 1920, under Cal. No. 153-20-S.

The use of hydrated lime in all classes of concrete construction shall not be prohibited when used in accordance with the conditions hereinafter set forth.

The hydrated lime shall conform with the standard specifications for this material which have been adopted by the American Society for Testing Materials.

The maximum amount of hydrated lime which may be used shall conform with the following table, all weights given being the amount of lime which may be incorporated for each ninety-five pound bag of Portland cement.

1-1½-3 Mix, 4 pounds of hydrated lime per bag of cement.

1-2-4 Mix, 5 pounds of hydrated lime per bag of cement.

1-2½-5 Mix, 6 pounds of hydrated lime per bag of cement.

For hand mixed concrete, the hydrated lime and Portland cement shall be well mixed while dry.

Hydrated lime shall not be used in concrete which is to be deposited under water.

MINUTES

BOARD OF STANDARDS AND APPEALS

REGULAR MEETING.

TUESDAY MORNING, DECEMBER 15, 1925.

Present: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle and Fire Chief Kenlon.

THE RESOLUTION:

(152-25-A)

WHEREAS, Croker National Fire Prev. Eng. Co., for Columbia University, filed, February 3, 1925, an appeal with the board of standards and appeals, from an order of the fire commissioner, affecting premises 15-17-19 Amsterdam avenue, 427-437 West 59th street and 134-168 West 60th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated June 26, 1924, reads:

"Order No. 61352-F—

(IN CLINIC)

"Install a standpipe system with risers 4 in. in diameter tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ in. regulation Fire Department outlets on each story * * *";

and

WHEREAS, the premises consists of two fireproof attached buildings, three and five stories (45 ft. and 56 ft.) in height, 201 ft. 5 in. by 60 ft. 7 in., about 11,500 sq. ft. in combined floor area at 1st, 2nd and 3rd stories; OCCUPIED and known as the Vanderbilt Clinic, no patients kept over night; about 80 persons on each story; and

WHEREAS, the appellant claims the two attached buildings are separated by heavy brick walls with connecting doorway openings, some of which are provided with fire-

MINUTES

proof self-closing doors; that the floor area of each building is less than 6,000 sq. ft.; he further contends that the premises will be vacated in 1928 for a new structure; and

WHEREAS, the appellant proposes to provide fireproof self-closing doors in all doorway openings in the separating wall which are not now so provided.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the building as now sub-divided, approximately in half by a wall of approved masonry, shall not be extended or altered; that there shall be no patients housed or maintained in the premises during the night; and that the use and occupancy shall be restricted to the conduct and maintenance of an outdoor clinic.

780-25-A.

APPELLANT—Ditmars & Reilly, for St. Vincent's Hospital, owner.

SUBJECT—Appeal from decision of fire commissioner.
PREMISES AFFECTED—148-172 West 12th street, Manhattan.

APPEARANCES—

For Appellant: Richard D. Fine.

For Administration: Inspector Carroll, of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

THE RESOLUTION:

(780-25-A)

WHEREAS, Ditmars & Reilly, for St. Vincent's Hospital, filed, July 24, 1925, an appeal, with the board of standards and appeals, from an order of the fire commissioner, affecting premises 148-172 West 12th street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated July 10, 1925, reads:

"Bottom of gravity tank must be 20 ft. above roof.";

and

WHEREAS, the building is fireproof, 13 stories in height, 121 ft. 10¼ in. by 95 ft. 9 in. in area; OCCUPIED as a residence for student nurses; about 16 persons on each story; EQUIPPED with two gravity tanks, the bottoms of which are set 3 ft. above the roof; the said tanks are used in common for house service and standpipe supply; and

WHEREAS, the appellant proposes to install in the top of each existing tank an additional tank, 1,750 gallons capacity, the bottom of which shall be 16 ft. above the highest outlet exclusively for standpipe supply.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the two auxiliary tanks as proposed, with a capacity of not less than 1,750 gallons each, cross-connected, shall be set not less than 16 ft. 3 in. above the height of the highest outlet on top story; and that the standpipe installation shall comply with the rules in all other respects.

781-25-A.

APPELLANT—Benjamin Ascher, for Thrift Buttons Works, lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—187 Lafayette street, Manhattan.

APPEARANCES—

For Appellant: Benjamin Ascher.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commission-

ers Connell, Flanagan, Guilfoyle and Fire

Chief Kenlon 5

Negative 0

Absent 0

THE RESOLUTION:

(781-25-A)

WHEREAS, Benjamin Ascher, for Thrift Button Works, lessee, filed, July 28, 1925, an appeal, with the board of standards and appeals from an order of the fire commissioner, affecting premises 187 Lafayette street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 30247-C, reads:

"1. Discontinue the use of premises for the storage and use of nitro-cellulose products.

"REASON: Resolution of Board of Appeals of April 8, 1924, printed in Bulletin No. 16, Vol. 9. Vol. 9 requires that the celluloid occupancy of the 3rd and 4th stories be vacated on or before Feb. 21, 1925."

"Order No. 19597-LC, reads:

"1. Enclose with fireproof material the interior stairway leading to 3rd and 4th stories.

"7. Protect all steam pipes or risers that are within 6 ft. 0 in. of floor with wire guards or non-combustible pipe covering. Sec. 235-9, chapter 10, code of ordinances.

"8. Provide suitable guards around radiators and steam pipes to prevent combustible material from coming in contact therewith.

"NOTE: Top shall be sloping so as to prevent same from being used as shelves.

"9. Bottom of guard shall be arranged so as to lift up for cleaning. Sec. 235-9, Chap. 10, Code of Ordinances.

"14. Discontinue the storage of finished stock anywhere on your premises, except in approved vaults or cabinets or in a special finished stock storeroom.";

and

WHEREAS, the building is fireproof, eight stories in height, 30 ft. by 120 ft. in area; OCCUPIED as a tenant factory, 128 persons above the 1st story, the appellant occupying the 3rd story for the manufacture of celluloid buttons and novelties; and

WHEREAS, appellant contends having given up the use of the 4th story and proposes to vacate the building on February 21, 1926, and requests meanwhile to store in an approved vault 2,500 pounds of celluloid, not more than 500 pounds in work, and proposes to provide boards on the tables nearest the steam coils which will prevent material from falling therefrom.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the celluloid occupancy on 3rd story, *on condition* that the resolution adopted by the board under Cal. No. 83-24-A shall be complied with in all other respects; and that the celluloid occupancy shall be discontinued throughout the entire premises on or about February 1, 1926.

804-25-A.

APPELLANT—William F. Doyle, for Louvain Holding Co., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—149 Spring street, Manhattan.

APPEARANCES—

For Appellant: William F. Doyle.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire

Chief Kenlon 5

Negative 0

Absent 0

MINUTES

THE RESOLUTION:

(804-25-A)

WHEREAS, William F. Doyle, for Louvain Holding Company, owner, filed, August 5, 1925, an appeal from an order of the fire commissioner, affecting premises 149 Spring street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 80163-F, Item 1, reads:

"Install a standpipe system with risers 4 inches in diameter tested to withstand a pressure of 300 lbs. per sq. in. extending from cellar to roof * * *";

and

WHEREAS, the building is non-fireproof, eight stories and cellar (96 ft.) in height, 25 ft. by 100 ft. in area at the 1st story and 25 ft. by 96 ft. in area above; OCCUPIED as a tenant factory, 129 persons above the 1st story; and

WHEREAS, the appellant contends that the occupancy of the building is not hazardous; that the means of egress are ample and comply in all respects with the labor law, and contends, further, that it is doubtful if the present roof could support the tanks necessary for the standpipe system.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the installation of roof tank, *on condition* that the standpipe system shall be installed in accordance with the regulations in all other respects.

1099-25-A.

APPELLANT—Wm. V. McDevit, for Willandmac Corp., owner.

SUBJECT—Appeal from decision of fire commissioner.
PREMISES AFFECTED—8020 Roosevelt avenue, Jackson Heights, Borough of Queens.

APPEARANCES—

For Appellant: None.

For Administration: Inspector Carroll of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon 5

Negative 0

Absent 0

THE RESOLUTION:

(1099-25-A)

WHEREAS, Wm. V. McDevit, for Willandmac Corp., owner, filed, October 26, 1925, an appeal from a decision of the fire commissioner, affecting premises 8020 Roosevelt avenue, Jackson Heights, Borough of Queens; and

WHEREAS, the decision of the fire commissioner, Application No. 2223-25, reads:

"1. Burner and pumps must be of a type approved by the Board of Standards and Appeals.";

and

WHEREAS, the building is non-fireproof, two stories in height, 60 ft. by 100 ft. in area. OCCUPIED: 1st story, auto sales store; 2nd story, vacant; and

WHEREAS, the applicant proposes to install a fuel oil burning system, using grade "A" oil, the Wayne Fuel Oil Burner, type "N" and pumps will be installed for the purpose of test and approval by the board of standards and appeals; the said burner and pumps have been submitted to the board under Cal. No. 1155-25-SA.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a period of ninety (90) days, at owner's risk, only so far as it affects the burner, pending determination of approval of said burner by the board, *on condition* that the equipment shall comply with the fuel oil rules of the board of standards and appeals in all other respects.

141-25-A.

APPELLANT—Runkel Brothers, Inc., lessee.

SUBJECT—Application for extension of permit—appeal from decision of fire commissioner.

PREMISES AFFECTED—445-451 West 30th street, Manhattan.

APPEARANCES—

For Appellant: George P. Knight.

ACTION OF BOARD—Extension of permit granted.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle . . . 4

Negative 0

Absent: Fire Chief Kenlon 1

THE RESOLUTION:

(141-25-A)

WHEREAS, Runkel Brothers, Inc., lessee (Ernest D. Fieux, secretary), filed, February 2, 1925, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 445-451 West 30th street, Manhattan; and

WHEREAS, the decision of the fire commissioner reads: "Burners must be of a type approved by the Board of Standards and Appeals.";

and

WHEREAS, the building is fireproof, ten (10) stories in height, 100 ft. by 197 ft. 6 in. in area; OCCUPIED as a factory and office building; and

WHEREAS, a fuel oil burning system has been installed consisting of a 13,700 gallon and also a 16,000 gallon fuel oil tank, a "Petro" burner and the necessary pumps, valves, piping, etc., to make a complete installation; and

WHEREAS, appellant contends that the installation conforms with the fuel oil rules excepting that the burner is not an approved burner; and that the burner has been submitted to the board for approval; and requests a temporary permit pending the approval of the burner; and

WHEREAS, this appeal was granted by the board for a temporary period of ninety days, May 5, 1925, and October 6, 1925, and appellant requests a continuation of the permit.

Resolved, that the decision of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, for a temporary period of ninety days, at owner's risk, *on condition* that the installation shall comply with the fuel oil rules in all other respects.

BUILDING ZONE CASES.

796-25-BZ.

Negative: Commissioner Guilfoyle 1
Absent 0

THE RESOLUTION:

(829-25-BZ)

WHEREAS, Tobias Goldstone, for Estate of George E. Eddy, owner, filed, August 13, 1925, an application, under the building zone resolution, to permit the erection, under section 7b, on a plot partly in an unrestricted district and partly in a residence district, of a proposed garage, for the

MINUTES

storage of more than five (5) motor vehicles; premises 345-355 Classon avenue, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 15, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Lafayette avenue is in a residence district; that Classon avenue is in an unrestricted district, and that Taaffe place is in an unrestricted district; and

WHEREAS, the decision of the superintendent of buildings, rendered July 14, 1925, reads:

"Proposition contrary to zone resolution, Art. II, Sec.

3. (The erection of a public garage partly in a residential district.)";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 125 ft. and a depth of 183 ft. 10 in.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the entire plot has been in the same ownership for many years prior to the adoption of the zone resolution; and

WHEREAS, there exist on this same plot non-conforming uses; and the surrounding buildings are mostly dilapidated frame structures, and the board deemed the applicant was entitled to relief under section 7 (b and c).

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building shall be restricted to a one-story structure in height above grade; that the rear and gable walls shall be unpierced throughout their entire height and length; that the southerly portion on Classon avenue frontage for not less than 20 ft. shall be maintained and reserved to office use and conduct in conjunction with the proposed garage; that no vehicular entrance on Classon avenue frontage shall be located within 130 ft. northerly from the Lafayette avenue corner; that there shall be not more than one vehicular entrance on the Taaffe place front, located directly in the centre of the Taaffe place elevation; that no skylight shall be installed within 25 ft. of the southerly gable wall; that all skylights shall be glazed with plain glass, protected with wire guards above and below; that the street fronts of building shall be finished with face brick and architectural terra cotta or stone trim, other than the office show window, which shall be finished with polished plate glass; that the exterior of the southerly gable wall shall be finished with light-color face brick throughout, above grade; that any gasoline storage equipment installed shall be located at the Classon avenue front, at the extreme northerly end of the structure; that there shall be no advertising signs erected or maintained within the residence use area of the structure; that any advertising within the residence area on Classon avenue shall be restricted to the plate glass office show window; and that all permits necessary for the prosecution of the work shall be obtained within nine months and the work completed within eighteen months from the date of this action.

873-25-BZ.

APPLICANT—John J. McCormack, owner.

SUBJECT—Application (re: decision of fire commissioner) under section 21 of the building zone resolution to permit in a business district a gasoline filling station.

PREMISES AFFECTED—Northeast corner of 113th avenue and Springfield boulevard, Springfield Heights, Queens.

APPEARANCES—

For Applicant: John J. McCormack.

For Opposition: Richard Kerwick.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire

Chief Kenlon 5

Negative 0

Absent 0

THE RESOLUTION:

(873-25-BZ)

WHEREAS, John McCormack, owner, filed, August 27, 1925, an application, under the building zone resolution, to permit in a business district a gasoline selling station; premises northeast corner of Springfield boulevard and 113th avenue, Springfield Heights, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 15, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Springfield boulevard is in a business district, and that 113th avenue is in a residence district; and

WHEREAS, the decision of the fire commissioner, rendered July 31, 1925, reads:

"1. A gasoline service station may not be permitted in a business district. Appeal may be taken to the Board of Appeals.";

and

WHEREAS, the premises consists of a plot of ground having a frontage of 122 ft. on 113th avenue and 61 ft. on Springfield boulevard upon which it is proposed to erect a gasoline selling station; and

WHEREAS, the applicant owns the property under appeal, as well as two lots adjoining, on which is located his home; and

WHEREAS, applicant contends that the plans for structure were filed in fire prevention bureau on June 11, 1925, and that the amendment to the zoning resolution prohibiting gasoline selling stations in business districts became effective on June 12, 1925; the board deemed that there would be unnecessary hardship in the way of carrying out the strict letter of the law.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the gasoline selling station shall be restricted to the plot of 61 ft. frontage on Springfield boulevard and 122 ft. depth on 113th avenue, the property of the applicant and occupant of the premises; and that all permits required shall be obtained within ninety (90) days and any work involved shall be completed within four months.

877-25-BZ.

APPLICANT—George & Edward Blum, for 1412 Broadway, Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) under section 21 of the building zone resolution to permit in a two times height district the erection and maintenance of the street wall to a height exceeding the prescribed limit required by the zone resolution.

PREMISES AFFECTED—1410-1412 Broadway and 123 West 39th street, Manhattan.

THE RESOLUTION:

(877-25-BZ)

WHEREAS, William F. Doyle, for 1412 Broadway, Inc., owner, filed, August 28, 1925, an application, under the building zone resolution, to permit in a two-times height district the erection and maintenance of the street wall to a height exceeding the prescribed limit required by the zone resolution; premises 1410-12 Broadway and 123 West 39th street, Borough of Manhattan; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 15, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the district maps accompanying the building zone resolution show that West 40th street, Broadway and West 39th street are all in two-times height and business use districts; and

WHEREAS, the decision of the superintendent of buildings, rendered August 27, 1925, reads:

"1. Height of easterly 11 ft. 8¼ in. of the West 39th Street frontage of building is excessive. Section 9B of the Building Zone Resolution. Dormers along 39th Street frontage are of excessive lengths. Section 9C of Building Zone Resolution."

and

WHEREAS, the proposed building is of fireproof construction, 24 stories in height, with a frontage of 161 ft. 8¼ in. and a depth of 98 ft. 9 in.; to be occupied as lofts, offices and showrooms; it is proposed to erect the street wall for a distance of 11 ft. 8¼ in. on 39th street 200 ft. in height without a setback, instead of 120 ft., the limiting height as prescribed by the zone resolution; and

WHEREAS, the board deemed that there would be unnecessary hardship in the way of carrying out the strict letter of the zoning resolution.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the height district regulations of the building zone resolution, and that the application be and it hereby is *granted*, only so far as it affects the easterly end of the building, not exceeding a frontage of eleven (11) ft. eight and one-quarter (8¼) in., *on condition* that the requirements of the building zone resolution be complied with in all other respects.

879-25-BZ.

APPLICANT—McIntyre & O'Leary, for Essex & Shepard Co., Inc., owner.

SUBJECT—Application (re: decision of superintendent of buildings) under section 21 of the building zone resolution to permit in a business district the erection and maintenance of a poultry slaughter house.

THE RESOLUTION:

(879-25-BZ)

WHEREAS, McIntyre & O'Leary, for Essex & Shepard Co., Inc., owner, filed, August 28, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a poultry slaughter house; premises 137-151 East 98th street, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 15, 1925, after due notice by publication

in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that East 98th street is in a business district, and that Union street and Blake street are in business and residence districts; and

WHEREAS, the decision of the superintendent of buildings, rendered July 21, 1925, reads:

"Proposition contrary to the Zone Resolution, Art. 11, Sec. 4a. (The erection of a chicken slaughter house in a business district.)";

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 76 ft. 5¾ in. and a depth of 139 ft. 10 in. (triangle shape); to be occupied as a poultry slaughter house; and

WHEREAS, the board deemed that applicant did not establish his basis of appeal on the ground of practical difficulties and unnecessary hardship.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and that the application be and it hereby is *denied*.

402-25-BZ.

APPLICANT—William F. Doyle, for Emma A. Justice, owner.

SUBJECT—Request for modification of resolution (re: decision of superintendent of buildings) to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—Southeast corner of East 182nd street and Folin street, The Bronx.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: None.

ACTION OF BOARD—Application reopened and modified.

CONDITIONS—As specified in resolution.

THE VOTE TO REOPEN AND MODIFY—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4

Negative 0

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(402-25-BZ)

WHEREAS, William F. Doyle, for Emma A. Justice, owner, filed, April 14, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises southeast corner of East 182nd street and Folin street, The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its special meeting, October 9, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that 182nd street and Webster avenue are in the business district; and

WHEREAS, the decision of the superintendent of buildings, rendered April 4, 1925, reads:

"Erection of proposed garage for storage of more than five motor vehicles in business district is contrary to provisions of Building Zone Resolution."

and

WHEREAS, the proposed building is of non-fireproof construction, two stories in height, with a frontage of 37.95 ft. and a depth of 122.10 ft. (irregular); to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board deemed the basis of appeal under section 21 of the building zone resolution was substantiated; and

WHEREAS, this application was granted by the board at its meeting, October 9, 1925, on certain conditions, and applicant requested a modification of these conditions as to the vehicular entrance on 182nd street and as to the color of brick on front.

MINUTES

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building be restricted in height to a two-story structure; that there shall be not more than one vehicular exit or entrance on the 182nd street frontage; that the street elevations shall be finished in face brick with architectural terra cotta or stone trimmings; that the 182nd street front shall be of panel design; that the rear wall and southerly gable wall shall be unpierced throughout their entire height and length; that there shall be no advertising signs of any nature or description displayed on the 182nd street frontage; that no roof signs shall be erected or maintained and no advertising sign other than one projecting sign be erected on the Folin street front; that there shall be no vehicular exit or entrance on Folin street within 25 ft. of the corner formed by the intersection of 182nd street; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

CASES DISMISSED.

APPEALS FROM ADMINISTRATIVE ORDERS.

The chairman called attention to the following cases, where notices of intention to appeal were offered for filing; but where, despite notices from this office, papers have not been completed, thus tying the hands of the administrative official in the performance of his duty:

(127-25-A)

Filed January 28, 1925—Premises 644-648 Eighth avenue, Manhattan. Order of the fire commissioner. Appellant, Thomas W. Lamb. Dismissed for lack of prosecution.

(293-25-A)

Filed March 16, 1925—Premises 506 West Broadway, Manhattan. Order of the fire commissioner. Appellant, Maria Moriggia. Dismissed for lack of prosecution.

For Appellant: Thomas J. Donovan.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal laid over to January 5, 1926, at 10 a. m., on request of appellant's representative.

882-25-A.

APPELLANT—Samuel Rosenblum, for National Photo Novelty Co., lessee.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—360 Bowery, Manhattan.

APPEARANCES—

For Appellant: Samuel Rosenblum.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal withdrawn.

THE VOTE TO WITHDRAW—

Affirmative: Chairman Walsh, Commissioners
Connell, Flanagan, Guilfoyle and Fire
Chief Martin 5

Negative 0

Absent 0

823-25-A.

APPELLANT—H. C. Bohack Company, Inc., owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—1979-1981 Metropolitan avenue, Maspeth, Borough of Queens.

APPEARANCES—

For Appellant: Fred W. Meyer and William H. Goode.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—

Affirmative: Commissioner Guilfoyle 1

Negative: Chairman Walsh, Commissioners
Connell, Flanagan and Fire Chief Mar-
tin 4

Absent 0

THE RESOLUTION:

(823-25-A)

WHEREAS, H. C. Bohack Co., Inc., owner, filed, August 10, 1925, an appeal, with the board of standards and appeals from an order of the fire commissioner, affecting premises 1979-1981 Metropolitan avenue, Maspeth, Queens; and

WHEREAS, the order of the fire commissioner, dated July 22, 1925, reads:

"Order No. 82832—

"Install a standpipe system with risers 4 in. in diameter, tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof * * *";

and

WHEREAS, the building is non-fireproof, one story (15 ft.) in height, 112 ft. by 204 ft. in area; OCCUPIED as a factory, 95 persons; and

WHEREAS, the appellant contends the building is equipped with a sprinkler system, supplied by a tank of 50,000 gallons capacity, 100 ft. above ground; that a watchman makes hourly rounds; that there are two fire hydrants, and a 50 gallon Foamite tank within 50 ft. of the building.

Resolved, that the order of the fire commissioner be and it hereby is affirmed, and the appeal be and it hereby is denied.

MINUTES

827-25-A.

APPELLANT—Charles T. E. Dieterlen, for Charles S. Brown owner.

SUBJECT—Appeal from order of superintendent of buildings.

PREMISES AFFECTED—326-328 Third avenue, Manhattan.

APPEARANCES—

For Appellant: Charles T. E. Dieterlen.

ACTION OF BOARD—Appeal denied.

THE VOTE TO GRANT—

Affirmative 0

Negative: Chairman Walsh, Commissioners
Connell, Flanagan, Guilfoyle and Fire
Chief Martin 5

Absent 0

THE RESOLUTION:

(827-25-A)

WHEREAS, Charles T. E. Dieterlen, for the 82nd Street Corporation, sub-lessee, filed, August 13, 1925, an appeal from an order of the superintendent of buildings, affecting premises 326-328 Third avenue, Borough of Manhattan; and

WHEREAS, the order of the superintendent of buildings, dated July 27, 1925, reads:

"Viol. 2767-1925—

"Altering the southerly store into two stores at first floor, cutting show window, creating a new entrance to each store, and failing to set show window back to building line, as called for in amended application of June 2, 1925.";

and

WHEREAS, the building is non-fireproof, five stories in height, 45 ft. by 84 ft. in area. OCCUPIED: 1st story, stores, apartments above; and

WHEREAS, the appellant has altered the southerly store into two stores, which necessitated cutting through the show window erected one foot beyond the building line, so as to form entrances for the two stores, and failed to set such show window back to the building line; and

WHEREAS, the appellant contends the show windows of properties on either side of the premises under appeal project one foot beyond the building line; that if his show window was set back to the building line it would show a marked irregularity and mar the architectural design of the buildings.

Resolved, that the order of the superintendent of buildings be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

230-25-A.

APPELLANT—Frederick A. Lowe, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—1377 Washington avenue, The Bronx.

APPEARANCES—

For Appellant: George W. Brewster.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners
Connell, Flanagan, Guilfoyle and Fire
Chief Martin 5

Negative 0

Absent 0

THE RESOLUTION:

(230-25-A)

WHEREAS, Frederick A. Lowe, owner, filed, May 13, 1925, an appeal from an order of the fire commissioner, affecting premises 1377 Washington avenue, Borough of The Bronx; and

WHEREAS, the order of the fire commissioner, dated July 12, 1924, reads (Order No. 24982-LC):

"1. Remove all motor vehicles, the fuel tanks of which are not empty and to discontinue the use of premises as a motor vehicle repair shop.";

and

WHEREAS, the building is of frame construction, located in an unrestricted district, two stories in height, 20 ft. by 17 ft. OCCUPIED: 1st story, motor vehicle repair shop; 2nd story, storage; 2 persons in the building; and

WHEREAS, the appellant proposes to build brick sidewalk 12 in. in thickness, cover 1st story ceiling with ½ in. plaster board and 26 in. W. S. gauge metal; he claims the building has been used as a motor vehicle repair shop for a number of years.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted*, only so far as it affects the single structure on the rear of the premises with a depth of 17 ft. and a frontage of 28 ft., on condition that the motor vehicle repair shop occupancy of the building shall be restricted to the 1st story, the walls of which shall be built of approved masonry and the ceiling fire retarded with cement mortar on expanded metal lath; and that there shall be no vertical openings between the 1st and 2nd stories; that there shall be no gasoline storage equipments maintained on the premises; that the floors shall be finished in cement mortar.

BUILDING ZONE CASES.

845-25-BZ.

APPLICANT—John J. Dunnigan, for Walter Eveleth, owner.

SUBJECT—Application (re: decision of superintendent of buildings) under sections 7-c and 21 of the building zone resolution to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—Inwood avenue, northeast corner of Macombs road, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: None.

ACTION OF BOARD—Application laid over to December 22, 1925, at 10 a. m., for inspection and report by a committee of the board.

270-25-BZ.

APPLICANT—John J. Dunnigan, for Schinasi Commercial Corp., owner.

SUBJECT—Application (re: decision of superintendent of buildings) under section 21 of the building zone resolution to permit in a business district and also within 200 feet of a hospital the use of an existing building as a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—32-36 West 100th street, Manhattan.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: None.

ACTION OF BOARD—Application laid over to December 22, 1925, at 10 a. m., pending Chief Kenlon's report.

AREA FIXED.

(828-25-BZ.)

The chairman presented and read a communication from Alfred H. Eccles, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises southeast corner of Second and Newtown avenues, Borough of Queens.

The following area was approved by the board:

Both sides of Second avenue from a point 100 feet south of Grand avenue to the northerly side of Winslow place; both sides of Newtown avenue from Fourth avenue to Carver street and Mark place; the northerly side of Grand avenue from Second avenue to Third avenue; the west side of Third avenue from Grand avenue to Newtown avenue.

Adjourned, 5:00 p. m.

JAMES O'CONNOR, Secretary.

RULES

FIRE RETARDING RULES

Adopted by the Board of Standards and Appeals August 30, 1917; Amended November 1, 1917.

Rule 1. Fire Retarding Materials for Garages, Motor Vehicle Repair Shops and Oil Selling Stations. In garages, motor vehicle repair shops and oil selling stations any material or form of construction shall be deemed fire-retarding within the meaning of §73, subdivision 3, of the building code, that resists the action of flame and heat when subjected to a continuous fire for one hour at an average temperature of seventeen hundred (1700) degrees Fahrenheit without the passage of flame, and with a maximum temperature rise to four hundred (400) degrees Fahrenheit on the side away from the fire. The point at which the temperature of transmitted heat is measured shall be protected from external air and weather conditions.

When the test specimen is in the form of partition construction, the area under test shall be not less than one hundred (100) square feet and least dimension shall be not less than nine (9) feet. When in the form of floor construction, the area under test shall be not less than two hundred (200) square feet and the least dimension shall be not less than fourteen (14) feet.

During the fire, the floor construction shall support the live load for which it is designed, and after the fire shall safely sustain twice the designed live load with a maximum deflection of not more than one two-hundredth (1/200) part of the span.

Rule 2. Wood Joisted Floor Construction. Wood joisted floor construction shall be accepted as fire-retarding construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations when the beams are protected on the upper and under sides with the fire-retarding materials specified in rules for floor and ceiling coverings.

Rule 3. Floor Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the upper sides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) Seven-eighths ($\frac{7}{8}$) inch wood underflooring protected with a membrane of two-ply waterproofing covered with not less than two and one-half ($2\frac{1}{2}$) inches of 1:2½:5 concrete or better, reinforced with not less than one-fourth ($\frac{1}{4}$) of one (1) per cent of steel mesh.

(b) Two and one-half ($2\frac{1}{2}$) inches of 1:2:4 concrete applied directly to the top of the joists, with or without temporary support, reinforced with not less than one-fourth of one per cent steel rods, mesh or steel lath, and having the tops of the joists coated with approved waterproof paint or protected by tar paper on the top and on the sides for a distance of three inches from the top. (Amendment, Nov. 1, 1917.)

Rule 4. Ceiling Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the undersides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) One-half ($\frac{1}{2}$) inch plaster boards, or three-eighths ($\frac{3}{8}$) inch gypsum wall boards weighing not less than 16 pounds per square yard with pointed joints covered with No. 26 U. S. gauge sheet metal with one (1) inch lapped seams nailed to the wood beams when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are spaced more than sixteen (16) inches on centers;

(b) Two thicknesses of one-quarter ($\frac{1}{4}$) inch asbestos board laid with tight staggered joints and nailed to the beams, when spaced not more than sixteen (16) inches on centers, or nailed to furring

strips when the floor beams are more than sixteen (16) inches on centers.

(c) Metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($\frac{3}{4}$) inch thick.

Rule 5. Attachment to Ceiling. Fire-retarding ceilings in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations shall be attached to wood floor beams and girders in such manner as to maintain an air space between the wood beams, and all wood beams shall be seasoned before applying the protective coat.

Rule 6. Openings in Fire-Retarding Floors. Pipes or conduits which pass through floors shall be fitted with metal thimbles and made watertight for a height of three (3) inches above the floor.

Rule 7. Columns. All structural posts and columns in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials accepted in fireproof construction; except that an air space shall not be required around steel or cast iron columns.

Where necessary for protection against mechanical injury, the fire-retarding protection on columns shall be jacketed to a height of five (5) feet from the ground with No. 4 U. S. gauge metal.

Rule 8. Girders. All girders in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials acceptable in fireproof construction; except that an air space need not be provided around steel girders.

Rule 9. Shaft Enclosures. Existing stairways and vertical shafts in non-fireproof business buildings hereafter converted to be used as garages, motor vehicle repair shops or oil selling stations shall be enclosed in fire-retarding partitions continued through the non-fireproof floor construction, and when unfilled wood stud partitions are used, the space between the floor beams shall be fire-stopped with incombustible materials. All openings in such partitions shall be protected with accepted metal-covered fire doors or windows. Wherever necessary for protection against mechanical injury, the partition shall be jacketed to a height of five (5) feet on the garage side with No. 4 U. S. gauge metal. Any one of the following forms of partitions shall be accepted for the enclosure:

(a) Two by four inch wood studs, spaced not more than sixteen (16) inches on centers, covered both sides with metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($\frac{3}{4}$) of an inch thick;

(b) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($\frac{7}{8}$) inch wood sheathing, one-half ($\frac{1}{2}$) inch plaster boards with pointed joints and No. 26 U. S. gauge sheet metal with one-inch lapped seams;

(c) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($\frac{7}{8}$) inch wood sheathing, two thicknesses of one-quarter ($\frac{1}{4}$) inch asbestos boards laid with tight staggered joints and jacketed with No. 16 U. S. gauge metal on the garage side to a height of five (5) feet.

(d) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, filled in solidly between the studs with four inches of approved fireproof materials and covered on both sides with No. 26 U. S. gauge metal;

(e) Existing wood stud, lath and plaster partitions covered on the garage side with No. 26 U. S. gauge sheet metal with one-inch lapped seams.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Tuesday, December 22, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rules 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent (12½%) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds (2/3) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half (1½) inches in size [with a one and one-quarter (1¼) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half (1½) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half (½) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

(a) For Standard one-half (½) inch heads—

8 feet in 12 foot bays;
9 feet in 11 foot bays;
10 feet in 10 foot bays;
11 feet in 9 foot bays;
12 feet in 5 to 8 foot bays;

(b) For Conran* one (1) inch heads—
20 feet in 5 to 12 foot bays.

(c) For Conran* one and one-quarter (1¼) inch heads—
25 feet in 5 to 12 foot bays.

(d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 6 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half (1/2) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
3/4 inch	1 head
1 " "	2 heads
1 1/4 " "	3 " "
1 1/2 " "	5 " "
2 " "	10 " "
2 1/2 " "	20 " "
3 " "	36 " "
3 1/2 " "	55 " "
4 " "	80 " "
5 " "	140 " "
6 " "	200 " "
7 " "	300 " "
8 " "	420 " "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
1 1/4 " "	2 heads
1 1/2 " "	3 " "
2 " "	4 " "
2 1/2 " "	6 " "
3 " "	9 " "
4 " "	18 " "
5 " "	34 " "
6 " "	51 " "
7 " "	75 " "
8 " "	105 " "

(c) For Conran* one and one-quarter (1 1/4) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 1/4 inch	1 head
1 1/2 " "	2 heads
2 " "	3 " "
2 1/2 " "	4 " "
3 " "	6 " "
4 " "	12 " "
5 " "	21 " "
6 " "	40 " "
7 " "	60 " "
8 " "	84 " "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half (2 1/2) inch pipe does not supply more than sixteen (16) standard one-half (1/2) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half (1/2) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter (1 1/4) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.
- At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, suffing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads.128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.

All pressure tanks shall be tested after erection to a test pressure of one and one-half (1½) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a small pump, the main controlling gate being meanwhile kept shut. Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

BOARD OF STANDARDS AND APPEALS.

APPEALS FROM ADMINISTRATIVE ORDERS.

The forty-eight pier cases listed herewith were laid over, pending decision by the Supreme Court on a test case.

PIER CASES.

- 480-19-A—Piers 4 and 5, North River, Manhattan.
- 481-19-A—Old Pier 3, North River, Manhattan.
- 594-19-A—Pier 8, North River, Manhattan.
- 595-19-A—Pier 44, East River, Manhattan.
- 877-19-A—Pier 14, North River, Manhattan.
- 878-19-A—Pier 15, North River, Manhattan.
- 879-19-A—Pier 15, North River, Manhattan.
- 880-19-A—Pier 28, East River, Manhattan.
- 881-19-A—Pier 1 (Old), North River, Manhattan.
- 882-19-A—Pier 27, North River, Manhattan.
- 883-19-A—Pier 29, North River, Manhattan.
- 884-19-A—Pier 30, North River, Manhattan.
- 885-19-A—Pier 78, North River, Manhattan.
- 886-19-A—Pier 42, North River, Manhattan.
- 890-19-A—Pier 70, East River, Manhattan.
- 937-19-A—Piers 37 and 38, East River, Manhattan.
- 948-19-A—Pier 121, foot of West 131st street, North River, Manhattan. (Order No. 95587-F.)
- 949-19-A—Pier 121, foot of West 131st street, North River, Manhattan. (Order No. 95586-F.)
- 950-19-A—Pier 121, foot of West 131st street, North River, Manhattan. (Order No. 95585-F.)
- 981-19-A—Piers 22-25, East River, Manhattan.
- 1003-19-A—Pier 28, North River, Manhattan.
- 31-20-A—Pier 13, East River, foot of Wall street, Manhattan.
- 265-20-A—Pier 46, East River, foot of Van Brunt street, Brooklyn.
- 266-20-A—Pier 39, East River, foot of Van Dyke street, Brooklyn.
- 267-20-A—Pier 31, East River, s. w. s. Atlantic Basin, Brooklyn.
- 268-20-A—Pier 36, East River, foot of Pioneer street, Brooklyn.
- 269-20-A—Pier 35, East River, n. e. s. Atlantic Basin, Brooklyn.
- 270-20-A—Pier 34, East River, foot of Hamilton street, Brooklyn.
- 271-20-A—Pier 27, East River, foot of Baltic street, Brooklyn.
- 272-20-A—Pier 17, East River, foot of Joralemon street, Brooklyn.
- 273-20-A—Pier 19, East River, foot of Clark street, Brooklyn.
- 318-20-A—Pier between North 4th and 5th streets, East River, Brooklyn.
- 352-20-A—Pier 3, Wallabout basin, foot of Washington and E streets, Brooklyn.
- 353-20-A—Pier 2, Wallabout basin, foot of Washington and F streets, Brooklyn.
- 383-20-A—Pier 20, East River Manhattan.
- 420-20-A—Pier 5, between Poplar and Middagh streets, Brooklyn.
- 421-20-A—Pier 22, foot of Atlantic avenue. Brooklyn.
- 422-20-A—Pier 29, foot of Harrison street. Brooklyn.

- 423-20-A—Pier 32, foot of Degraw street, Brooklyn.
- 471-20-A—Pier between North 4th and 5th streets, Brooklyn.
- 907-21-A—East side South street, foot of Dover street, Manhattan.
- 1205-21-A—Pier No. 21, East River, east side South street, foot of Dover street, Manhattan.
- 1302-21-A—Pier 15, East River, Manhattan.
- 1541-21-A—Pier 3, between Main and Dock streets, Brooklyn.
- 1542-21-A—Pier 3, between Main and Dock Streets, Brooklyn.
- 1543-21-A—Pier 2, between Main and Dock streets, Brooklyn.
- 1544-21-A—Pier 2, between Main and Dock streets, Brooklyn.
- 1545-21-A—Pier 2, between Main and Dock streets, Brooklyn.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before the board—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of the board, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of the board is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

BOARD OF STANDARDS AND APPEALS

WILLIAM E. WALSH, Chairman

Commissioners

HENRY L. CONNELL

JOSEPH FLANAGAN

JOHN GUILFOYLE

FIRE CHIEF JOHN KENLON

JAMES O'CONNOR, Secretary

EDWARD V. BARTON, Chief Clerk

OFFICE—Municipal Building, Rooms 1001 to 1015.

TELEPHONE—Worth 0184.

OFFICE HOURS—9 a. m. to 5 p. m. Saturdays, 9 a. m. to 12 noon.

All communications should be addressed to the chairman of the board

CONTENTS

This issue of the Bulletin contains, in the order given—

Docket.

Call of Clerk's Calendar.

The Trial Calendar.

Notices in Building Zone Cases.

Minutes of Regular Meeting, December 22, 1925, at 10 a. m.

Minutes of Regular Meeting, December 22, 1925, at 2 p. m.

Rules.

Notice of Public Hearing.

Progress Report.

PUBLIC HEARINGS

Tuesdays, at 10 a. m. and 2 p. m.

Special meetings as published in this Bulletin.

Call of Clerk's Calendar, Tuesdays, at 2 p. m.

All hearings are held in Room 1013, Municipal Building, Manhattan.

HOURS FOR CONSULTATION.

10 A. M. to 1 P. M.

Any person desiring to consult the chairman or the engineers, pertaining to the work of the board, will be seen only between the hours of ten in the morning and one in the afternoon—Saturdays excepted.

CALL OF CLERK'S CALENDAR.

The Clerk's Calendar consists of applications under the Building Zone Resolution, and its object is to give interested property owners opportunity to file objections, if any, and will be called in Room 1013, Tuesday, December 29, 1925, at 2 o'clock. At this call each case is set for hearing on a definite day.

The next subsequent Call of the Calendar will be on Tuesday, January 5, 1926, at 2 o'clock.

The Clerk's Calendar is not to be confused with the calendar of cases that have been definitely set for hearing on fixed days.

NOTICE TO APPELLANTS AND PETITIONERS.

No appeal, application or petition will be entertained in connection with which court proceedings are pending or in progress, nor accepted that are not filed within twenty days from the date of the action of the Administrative Official.

Any communication purporting to be an appeal, application or petition shall be regarded as a mere notice of intention to seek relief until it is filed on the form required by the rules of this board.

Upon receipt of any such communication the writer will be supplied with the official forms for presenting his appeal, application or petition, and if he fails to supply the data required thereon, within twenty days, his case may be dismissed for lack of prosecution.

At the time of filing an application, the appellant or petitioner shall forward a signed notice of appeal addressed to the administrative official (either superintendent of buildings or fire commissioner) and file with this board a duplicate of said notice.

Petitioners are advised that their plans must indicate the points of the compass so as to establish the true location and position of the property, the subject of the appeal.

Appeals, applications and petitions will be simplified and expedited by conforming to these directions.

WILLIAM E. WALSH, Chairman,

NOTICE IS HEREBY GIVEN by the board of standards and appeals of a public hearing under the provisions of the building zone resolution, *Tuesday morning, February 16, 1926, at 10 o'clock, in Room 1013, Municipal Building, on the following matter:*

CAL. NO. 845-25-BZ—Application, August 19, 1925, under sections 7-c and 21 of the building zone resolution, of John J. Dunnigan, applicant, on behalf of Walter Eveleth, owner, to permit in a business district extending from an unrestricted district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises northeast corner of Inwood avenue and Macombs road, The Bronx.

CONCRETE RULES

USE OF HYDRATED LIME IN CONCRETE.

Adopted by the Board of Standards and Appeals, April 19, 1920, under Cal. No. 153-20-S.

The use of hydrated lime in all classes of concrete construction shall not be prohibited when used in accordance with the conditions hereinafter set forth.

The hydrated lime shall conform with the standard specifications for this material which have been adopted by the American Society for Testing Materials.

The maximum amount of hydrated lime which may be used shall conform with the following table, all weights given being the amount of lime which may be incorporated for each ninety-five pound bag of Portland cement.

1-1½-3 Mix, 4 pounds of hydrated lime per bag of cement.

1-2-4 Mix, 5 pounds of hydrated lime per bag of cement.

1-2½-5 Mix, 6 pounds of hydrated lime per bag of cement.

For hand mixed concrete, the hydrated lime and Portland cement shall be well mixed while dry.

Hydrated lime shall not be used in concrete which is to be deposited under water.

THE RESOLUTION:

(785-24-A)

WHEREAS, Philip J. Sinnott, for Harry Schneider, owner, filed, June 10, 1924, an appeal, with the board of appeals, from a decision of the fire commissioner, affecting premises 6118 Rockaway Beach boulevard, Arverne, Borough of Queens; and

WHEREAS, the decision of the fire commissioner, N. B. App. No. 582-22, dated May 13, 1924, reads:

"1. A gravity tank of 3,500 gallon capacity must be provided. * * *.

"2. Provide an approved electric pump having a capacity of at least 250 gallons per minute. * * *.";

and WHEREAS, the building is fireproof, one story and roof garden, 28 ft. in height, 76 ft. by 165 ft. (irregular) in area; OCCUPIED as a moving picture theatre and stores; and

WHEREAS, this appeal was granted by the board at the meeting held on January 6, 1925, on condition that a stand-pipe system with not less than two four-inch connections to city mains shall be provided; and that the auditorium and roof garden shall not be used or operated at the one time; and reopened by the vote of the board at the meeting held on April 21, 1925; and

WHEREAS, appellant contends that the city water mains have not yet been installed; that the building is fireproof, and contends further that the city mains will be laid early in this summer; and

WHEREAS, the board acted on the case, modifying the order of the fire commissioner under date of January 6, 1925, and now deems that as the city water mains have been laid the conditions set forth in the resolution of January 6, 1925.

Resolved, that the request for modification of this resolution be dismissed and the action of the board of January 6, 1925, be affirmed.

672-25-A.

APPELLANT—Riker-J. M. Hoffman Co., for Ida Kalik, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—1171 President street, Brooklyn.

APPEARANCES—

For Appellant: None.

For Administration: Inspector Lynch, of fire department.

ACTION OF BOARD—Appeal dismissed.

THE RESOLUTION:

(672-25-A)

WHEREAS, Riker-J. M. Hoffman Co., for Ida Kalik, owner, filed, June 30, 1925, an appeal from an order of the fire commissioner, affecting premises 1171 President street, Brooklyn; and

WHEREAS, the order of the fire commissioner No. 96737-LC, dated June 8, 1925, reads:

"4. Isolate the boiler room from rest of building with fireproof material in accordance with the requirements of F. D. Plan 1595-23 (ceiling of boiler room must be of approved fireproof construction. Doors to the boiler room to be fireproof and self-closing).";

and

WHEREAS, the building is non-fireproof, 4 stories in height, about 100 ft. by 100 ft. in area; OCCUPIED as tenement house, 10 families on each story; and

WHEREAS, the appellant proposes to comply with that part of item 4 of order 96737-LC in re: to "doors to the boiler room to be fireproof and self-closing," and he claims the rest of the item, in re: to "isolate the boiler room from the rest of the building with fireproof material," etc., is not necessary, in that the existing boiler room is enclosed with fireproof blocks 4 inches in thickness; that part of the ceiling is covered with 1/2-inch plaster boards and the other part is constructed of fireproof arches; and

WHEREAS, no one appeared when this case was called.

Resolved, that the appeal be and it hereby is dismissed for lack of prosecution.

it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that the existing 5,000-gallon tank serving house service and standpipe equipment shall be arranged to maintain a reserve of not less than 3,500 gallons for standpipe supply; that not less than four (4) approved 2 1/2-gallon fire extinguishers shall be provided in the corridor on top story, located as directed by fire commissioner; that approved siamese connections shall be provided on both street fronts; that the standpipe system shall comply with the regulations in all other respects; and *granted* so long as the existing occupancy of top floor remains substantially unchanged.

912-25-A.

APPELLANT—Peter Stumpf, owner.

SUBJECT—Appeal from order of fire commissioner.

PREMISES AFFECTED—1015 Walton avenue, The Bronx.

APPEARANCES—

For Appellant: Peter Stumpf.

For Administration: Inspector Lynch of fire department.

ACTION OF BOARD—Appeal denied.

THE RESOLUTION:

(912-25-A)

WHEREAS, Peter Stumpf, owner, filed, September 9, 1925, an appeal with the board of standards and appeals from an order of the fire commissioner, affecting premises 1015 Walton avenue, Borough of The Bronx; and

WHEREAS, the order of the fire commissioner, No. 30495-LC, dated July 24, 1925, reads:

"Item 1. Encase the inside storage tank with four inch terra cotta or eight inches of approved masonry, as per Rule 19, Section 1-a of the Fuel Oil Rules.

"2. Provide a hydrostatic test of fuel oil storage tank or tanks of at least 25 lbs. per square inch, for all riveted tanks, Rule 7, Sec. 1-b of the Fuel Oil Rules.

"4. Provide a hydrostatic test of not less than one hundred pounds per square inch for all Grade B fuel oil carrying piping, per Rule 25, Sec. 2 of the Fuel Oil Rules.

"6. Provide a remote control for shutting off the supply of oil to the burner in case of an abnormal discharge, per Rule 26-c of Fuel Oil Rules.

"13. Discontinue the use of fuel oil storage tank or tanks of the gravity or pressure type, as per Rule 34 of Fuel Oil Rules.";

and

WHEREAS, the building is non-fireproof, 2 stories in height, 22 ft. by 60 ft. in area; OCCUPIED as a dwelling; and

WHEREAS, a fuel oil burning system has been installed, consisting of a 200-gallon oil storage tank, a 60-gallon auxiliary tank, a Powerlight Oil Heat Burner and the necessary valves and piping to make a complete installation; and

WHEREAS, appellant contends that the tank will be properly encased after test by the fire department; re: Item 4, contends that all piping is standard, wrought iron, and requests that this test be waived; re: Item 6, contends that the tank is filled by a rotary hand pump, adjacent to tank; re: Item 13, contends that the installation burning Grade B fuel oil in a dwelling is not a hazard if installed in conformity with the fuel oil rules; and further contends that the burner has been approved by this board.

Resolved, that the order of the fire commissioner be and it hereby is *affirmed*, and the appeal be and it hereby is *denied*.

920-25-A.

APPELLANT—Samuel Rosenblum, for Hardman Peck & Co., owner.

THE RESOLUTION:

(825-25-A)

WHEREAS, Pendleton & Pendleton, for Young Men's Christian Association, owner, filed, August 12, 1925, an appeal from an order of the fire commissioner, affecting premises 177-185 Marcy avenue, Brooklyn; and

WHEREAS, the order of the fire commissioner, No. 70564-F, reads:

"1. Provide a tank on roof of at least 3,500 gallon capacity for the standpipe system, said tank to be so elevated that the bottom will be not less than 20 ft. above the roof level. . . .";

and

WHEREAS, the building is fireproof, 6 stories and basement, 79 ft. 10 in. in height, 117 ft. by 98 ft. irregular in depth; OCCUPIED: basement, power plant and pool; 1st story, auditorium and offices; 2nd story, social rooms; 3rd story, auditorium, class rooms; 4th, 5th and 6th stories, dormitories, 43 rooms on each story; and

WHEREAS, the appellant claims the building is now provided with a gravity tank of 5,000 gallons capacity, located seven (7) feet above the roof, for the combined use of standpipe and house service; a 600-gallon Dean Duplex steam pump; two siamese connections, one on each street front, properly checked; and that the premises are under constant supervision night and day.

Resolved, that the order of the fire commissioner be and

WHEREAS, Samuel Rosenblum, for Hardman Peck & Co., owner, filed, September 9, 1925, an appeal with the board of standards and appeals from an order of the fire commissioner, affecting premises 546-8 West 52nd street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated July 31, 1925, reads:

"Order No. 82095-F.

"1. Provide iron shutters at all openings in the exterior wall above the 1st story which are distant in a direct line less than 30 ft. from any opening in any other building and not in the same plane with said openings and which are not more than 50 ft. above a neighboring roof at south side of building."

and

WHEREAS, the building is non-fireproof, 4 stories in height, 50 ft. by 100 ft. 5 in. in area at 1st story and 50 ft. by 70 ft. in area above; OCCUPIED for the manufacture of pianos; 23 persons above the 1st story; and

WHEREAS, there are five windows on each story above the 1st story within 30 ft. of openings in a building to the east; and

WHEREAS, appellant contends that the building forming the exposure is under the same ownership and management as the building in question; that both buildings are equipped with sprinkler systems and that the openings forming the exposure are protected with iron shutters.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted* so far as it affects all windows other than those opening on course of fire escapes *on condition* that the building shall be provided with an approved sprinkler system; and *granted* so long as the premises constituting the exposure and this property remain in same ownership and operation.

THE RESOLUTION:

(937-25-A)

WHEREAS, Rudolph P. Miller, for the Ibhah Realty Co.,

Inc., owner, filed, September 12, 1925, an appeal with the board of standards and appeals from an order of the fire commissioner, affecting premises 16-26 Northern avenue and 840-846 West 178th street, Manhattan; and

WHEREAS, the order of the fire commissioner, dated August 25, 1925, reads:

"Order No. 83785-F.

"1. Install a standpipe system with risers 4 inches in diameter, tested to withstand a pressure of 300 lbs. per square inch, extending from cellar to roof, with necessary check valves and 2½ in. regulation fire department outlets on each story (including basements, cellars and roofs), placed within main stairway enclosure. Each outlet to be provided with sufficient feet of 2½ in. standard hose attached thereto. . . .";

and

WHEREAS, the building is non-fireproof, 6 stories (63 ft.) in height, 105 ft. by 135 ft. (approximately 11,000 sq. ft.) in area; sub-divided into five sections by 8-inch walls; and

WHEREAS, appellant contends that the 8-inch walls divide the building into five sections, none exceeding 3,000 sq. ft.; that these walls are constructed in accordance with the Tenement House Law and that the openings therein are protected by fireproof self-closing doors; and

WHEREAS, the building faces in two street fronts and that the rear is accessible from rear yard; that by means of 8-inch interior walls the building is sub-divided into several sections and that the entire structure exceeds the area requirement by but approximately 500 sq. ft., and that other enclosing walls within the building provide a substantial barrier against the spread of fire.

Resolved, that the order of the fire commissioner be and it hereby is *modified*, and the appeal be and it hereby is *granted on condition* that no single fire area shall exceed 5,000 sq. ft.; that a public corridor shall be maintained on each story throughout the building from the apartments at either end of building with 8-inch walls of approved masonry; that all openings in and to the corridor shall be provided with self-closing, fireproof doors, and that the building shall not exceed a height of 65 ft.

CASES DISMISSED.

APPEALS FROM ADMINISTRATIVE ORDERS.

The chairman called attention to the following cases, where notices of intention to appeal were offered for filing, but where, despite notices from this office, papers have not been completed, thus tying the hands of the administrative official in the performance of his duty:

(330-25-A)

Filed March 26, 1925—Premises 66-70 Wyckoff avenue, and 368-386 Suydam street, Brooklyn. Order of fire commissioner. Appellant, Tobias Goldstone. Dismissed for lack of prosecution.

(529-25-A)

Filed May 21, 1925—Premises 245 83rd street, Brooklyn. Decision of fire commissioner. Appellant, William Porter. Dismissed for lack of prosecution.

(538-25-A)

Filed May 26, 1925—Premises 693-697 Broadway, Manhattan. Order of superintendent of buildings. Appellant, S. Gladstone & Son. Dismissed for lack of prosecution.

(567-25-A)

Filed June 2, 1925—Premises 41 Bleecker street, Manhattan. Order of fire commissioner. Appellant, Aaron Dermansky. Dismissed for lack of prosecution.

(597-25-A)

Filed June 10, 1925—Premises south side of Harris avenue, extending over entire block between Williams street and Crescent street, Long Island City, Queens. Decision of fire commissioner. Appellants, McCooey & Conroy. Dismissed for lack of prosecution.

MINUTES

(648-25-A)

Filed June 23, 1925—Premises 1519 Fulton street, Brooklyn. Order of fire commissioner. Appellant, Monroe J. Zimmerman. Dismissed for lack of prosecution.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4
Negative 0
Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

WHEREAS, the foregoing appellants have filed appeals with the board of standards and appeals from orders affecting the premises in question; and

WHEREAS, the appellants have failed to complete the papers, though duly notified to do so.

Resolved, that the foregoing appeals be and they hereby are *dismissed* for lack of prosecution.

THE RESOLUTION:

(802-25-BZ)

WHEREAS, Morris Whinston, for Harry Greenberg, owner, filed, August 5, 1925, an application, under the building zone resolution, to permit in a business district the conversion of occupancy from a paint shop to a motor vehicle repair shop; premises 823 Bedford avenue, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 22, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Bedford avenue is in business district and that both Spencer street and Park avenue are unrestricted districts; and

WHEREAS, the decision of the superintendent of buildings reads:

"Occupancy is contrary to zone resolution, and application is hereby denied. (Repair shop in a business district), zone resolution, art. 2, sec. 6." ;

and

WHEREAS, the existing building is of non-fireproof construction, one story in height, with a frontage of 25 ft. and a depth of 100 ft.; to be converted from a paint shop to a motor vehicle repair shop; and

WHEREAS, the premises under appeal is located in a street occupied by dwelling houses and inoffensive business use, and the board concluded that applicant had not established his basis of appeal under section 21 on the ground of practical difficulties and unnecessary hardship.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

876-25-BZ.

APPLICANT—Charles Kuhner, for Henrietta A. Stoll, owner.

Connell, Flanagan and Guilfoyle and
Fire Chief Kenlon 5

Absent 0

THE RESOLUTION:

(876-25-BZ)

WHEREAS, Charles Kuhner, for Henrietta A. Stoll, owner, filed, August 28, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a motor vehicle repair shop; premises west side of Jerome avenue, 150 ft. north of Featherbed lane, No. 1665 Jerome avenue, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 22, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Jerome avenue is in the business district and that both Featherbed lane and Davidson avenue are in the residential districts; and

WHEREAS, the decision of the superintendent of buildings reads:

"1. Erection of a building in a business district as an automobile repair shop is contrary to the provisions of the zone resolution.";

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 25 ft. and a depth of 100 ft.; to be occupied as motor vehicle repair shop; and

WHEREAS, the board concluded that applicant did not substantiate his basis of appeal under section 21 of the zoning resolution on the ground of unnecessary hardship or practical difficulty.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

271-25-BZ.

APPLICANT—John J. Dunnigan, for Ray Barnett, owner.

SUBJECT—Application (re: decision of superintendent of buildings) under section 7-e of the building zone resolution to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—956 Forest avenue, The Bronx.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: Herman M. Albert, Mrs. Tool and Mrs. Tynan.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Commissioner Guilfoyle..... 1

Negative: Chairman Walsh, Commissioners
Connell and Flanagan 3

Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(271-25-BZ)

WHEREAS, John J. Dunnigan, for Ray Barnett, owner, filed, March 10, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles; premises 956 Forest avenue, east side, 110.37 ft. north of 163rd street, Borough of The Bronx; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 22, 1925, after due notice by publication in

the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Forest avenue, East 163rd street and Tinton avenue are all in business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered March 6, 1925, reads:

"Erection of proposed garage for the storage of more than five motor vehicles in business district is contrary to provisions of Building Zone Resolution.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, one story in height, with a frontage of 72 ft. 4¾ in. and a depth of 135 ft.; to be occupied as a garage for the storage of more than five (5) motor vehicles; and

WHEREAS, the board has heretofore denied applications for garage use on the same street between intersecting streets on the basis of section 7-e, and there would be no unnecessary hardship caused by the denial of this application and the compliance with the zoning resolution requirements.

Resolved, that the decision of the superintendent of buildings be and it hereby is affirmed, and the application be and it hereby is denied.

1531-24-BZ.

APPLICANT—McCooley & Conroy, for Louis Schwartz and Estate of Harry Zaslansky, owners.

SUBJECT—Application (re: decision of superintendent of buildings) under section 21 of the building zone resolution to permit in a business district the conversion of occupancy from a machine shop to a poultry slaughter house.

PREMISES AFFECTED—116-118 Wilson avenue, Brooklyn.

APPEARANCES—

For Applicant: John H. McCooley, Jr.

For Opposition: Francis H. Giaccone.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Commissioner Guilfoyle..... 1

Negative: Chairman Walsh, Commissioners
Connell, Flanagan and Fire Chief Kenlon 4

Absent 0

THE RESOLUTION:

(1531-24-BZ)

WHEREAS, McCooley & Conroy, for Estate of Harry Zaslansky and Louis Schwartz, owner, filed December 29, 1924, an application, under the building zone resolution, to permit in a business district the conversion of occupancy from a machine shop to a poultry slaughter house, premises 116-118 Wilson avenue, Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 22, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Wilson avenue, Starr street and Willoughby avenue are all in business districts; and

WHEREAS, the decision of the superintendent of buildings, rendered December 4, 1925, reads:

"1. Proposed change of occupancy of building to slaughter house not permitted in business district, art. 11, sec. 4, 2 (33), p. 6, of Zone Resolution. Application is therefore denied.";

and

WHEREAS, the existing building is of fireproof construction, one story in height, with a frontage of 44 ft. and a depth of 80 ft.; to be occupied as poultry slaughter house; and

WHEREAS, there was substantial opposition by the people in the immediate vicinity, including those of churches and schools, refuting the claim of appellant that a petition had been signed by the people in the neighborhood in support of a chicken slaughter-house on the premises under appeal; and

WHEREAS, the premises under appeal is located in a business street occupied by dwelling houses and inoffensive busi-

MINUTES

ness use, and the board concluded that applicant had not established his basis of appeal under section 21 on the ground of practical difficulties and unnecessary hardship.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

795-25-BZ.

APPLICANT—Joseph S. Amsel, for Anna Cohen, owner.

SUBJECT—Application (re: decision of superintendent of buildings) under section 21 of the building zone resolution to permit in a business district the erection and maintenance of a gasoline service station.

PREMISES AFFECTED—1952-1956 Eastern Parkway, Brooklyn.

APPEARANCES—

For Applicant: Walter R. Kuhn.

For Opposition: None.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Commissioner Guilfoyle..... 1

Negative: Chairman Walsh, Commissioners Connell, Flanagan and Fire Chief Kenlon 4

Absent 0

THE RESOLUTION:

(795-25-BZ)

WHEREAS, Joseph S. Amsel, for Anna Cohen, owner, filed, August 3, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a gasoline service station; premises 1952-1956 Eastern Parkway, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 22, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Eastern parkway, Truxton street and Sackman street are all in business districts; and

WHEREAS, the decision of the superintendent of buildings reads:

"Application N. B. 12514-1925 is denied as same is contrary to Art. II, Sec. 4, Zone Resolution, as amended June 12, 1925.";

and

WHEREAS, the proposed building is of non-fireproof construction, one story in height, with a frontage of 26 ft. 4 in. and a depth of 9 ft., irregular; to be occupied as a gasoline station; and

WHEREAS, there is sufficient existing accommodation for general service in the immediate vicinity along the course of the highway, in the matter of gasoline service stations; and

WHEREAS, two street fronts or sidewalks would be involved and further encumbered by erection of gasoline station on this site; and

WHEREAS, there was an amendment adopted by the board of estimate prohibiting the further invasion of business districts with public gasoline selling stations; and, further, applicant did not establish his basis of appeal under section 21 on the ground of hardship or practical difficulty.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

891-25-BZ.

APPLICANT—William F. Doyle, for Bertha A. Wilkus, owner.

SUBJECT—Application (re: decision of superintendent of buildings) under section 21 of the building zone resolution to permit in a residence district the erection and maintenance of a building to

be used as stores on the first story and dwellings above.

PREMISES AFFECTED—Northeast corner of Beach 34th street and Edgemere avenue, Edgemere, Borough of Queens.

APPEARANCES—

For Applicant: William F. Doyle.

For Opposition: John J. Curtin, Benjamin Kronenberg and Nathan I. Sachs.

ACTION OF BOARD—Application denied.

THE VOTE TO GRANT—

Affirmative: Chairman Walsh and Commissioner Connell 2

Negative: Commissioners Flanagan and Guilfoyle and Fire Chief Kenlon..... 3

Absent 0

THE RESOLUTION:

(891-25-BZ)

WHEREAS, William F. Doyle, for Bertha Wilkus, owner, filed, September 1, 1925, an application, under the building zone resolution, to permit in a residence district the erection of a building to be used as stores on the 1st story and as dwellings above; premises northeast corner of Beach 34th street and Edgemere avenue, Edgemere, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 22, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that west side of Beach 34th street is in business district and that both Edgemere avenue and east side of Beach 34th street to a point 100 ft. north of Edgemere avenue are in residential districts; and

WHEREAS, the decision of the superintendent of buildings reads:

"You will please take notice that I have this day revoked the approval given to you on Plans 895-986-1925, filed on the 5th day of February, 1925, and approved February 7th, for the reason that I have been notified by the Chief Engineer of the Board of Estimate and Apportionment that although the maps show this particular location to be in a business district, nevertheless it is not in fact a business district, but a residential district and that the zoning map is in error.

"You are therefore ordered and directed by me to stop all further work in connection with the said operation.";

and

WHEREAS, the proposed building is to be of non-fireproof construction, two stories in height, with a frontage of 100 ft. on Edgemere avenue and 64 ft. on Beach 34th street; to be occupied as stores on the 1st story and as dwellings above; and

WHEREAS, there was opposition to the granting of this application on the part of neighboring property owners.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

828-25-BZ.

APPLICANT—Alfred H. Eccles, for Henry Gerken, owner.

SUBJECT—Application (re: decision of superintendent of buildings) under section 21 of the building zone resolution to permit in a business district the erection of a garage for more than five (5) motor vehicles.

PREMISES AFFECTED—Southeast corner of Second avenue and Newtown avenue Astoria, Borough of Queens.

APPEARANCES—

For Applicant: Alfred H. Eccles.

For Opposition: A. Vaughn, Mr. Murphy and others.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

MINUTES

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle.... 4
Negative 0
Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(828-25-BZ)

WHEREAS, Alfred H. Eccles, for Henry Gerken, owner, filed, August 13, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises southeast corner of Second avenue and Newtown avenue, Astoria, Borough of Queens; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 22, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that Second avenue and Newtown avenue are both in business districts; and

WHEREAS, the decision of the superintendent of buildings reads:

"Re N. B. 8889-1925—

"1. Erection of garage for more than five (5) motor vehicles is prohibited in a business district by the Zone Law.";

and

WHEREAS, the building is to be of non-fireproof construction, one story and basement in height, with a frontage of 132 ft. and a depth of 88 ft.; to be occupied as a garage for the storage of more than five motor vehicles and as a showroom and service station with minor alterations and repairs of automobiles; and

WHEREAS, the board concluded that applicant had complied with the provisions of section 7-g by filing more than 80 per cent of consents of property deemed affected of area fixed by board in accordance with rules and that it would be an unnecessary hardship in the way of carrying out the strict letter of the zoning resolution.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the building be erected fireproof, not exceeding a one-story structure in height above grade; that the rear and gable walls shall be unpierced throughout their entire height and length; that there shall be no vehicular entrance on the Newtown avenue front; that any windows, other than the return of the show window, shall be restricted to double hung windows, the sills of which shall be not less than 6 ft. above the sidewalk level; that the front elevations on Newtown avenue and Second avenue shall be finished with face brick and architectural terra cotta or stone trimmings, other than the plate glass windows of the store front; that a store or office shall be incorporated as indicated on the plans at the corner of the building at the intersection of Newtown avenue and Second avenue; that any gasoline storage equipment installed shall be located at the Second avenue front; that the exterior surface of the rear and gable walls shall be finished with light-colored face brick; that there shall be no roof signs erected or maintained, and no wall signs or advertising permitted on the rear or gable walls; that a return of the proposed elevations shall be made to this board for approval before submitting same to the superintendent of buildings; that all permits necessary for the prosecution of the work shall be obtained within nine months and the building completed within eighteen months from the date of this action.

901-25-BZ.

APPLICANT—Edward P. Doyle, for Hyman Morgenstern, owner.

SUBJECT—Application (re: decision of superintendent of buildings) under section 21 of the building

zone resolution to permit in a business district the erection and maintenance of a garage for the storage of more than five (5) motor vehicles.

Negative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle..... 4
Absent: Fire Chief Kenlon..... 1

THE RESOLUTION:

(901-25-BZ)

WHEREAS, Edward P. Doyle, for Hyman Morgenstern, owner, filed, September 3, 1925, an application, under the building zone resolution, to permit in a business district the erection and maintenance of a garage for the storage of more than five motor vehicles; premises 1305-7-9 Gates avenue, Borough of Brooklyn; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 22, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that both Gates avenue and Central avenue are in business districts and that Linden street is in a residential district; and

WHEREAS, the decision of the superintendent of buildings reads:

"1. Application denied. Proposed erection of a public garage for more than five cars in a business district, contrary to Art. 2, Sec. 4 of Zoning Resolution.";

and

WHEREAS, the building is of non-fireproof construction, one story and basement (23 ft.) in height, with a frontage of 75 ft. and a depth of 100 ft.; to be occupied as a garage for the storage of more than five motor vehicles; and

WHEREAS, the board concluded there was no practical difficulties and unnecessary hardship in complying with the strict letter of the zoning resolution requirements.

Resolved, that the decision of the superintendent of buildings be and it hereby is *affirmed*, and the application be and it hereby is *denied*.

270-25-BZ.

APPLICANT—John J. Dunnigan, for Schinasi Commercial Corporation, owner.

SUBJECT—Application (re: decision of superintendent of buildings) to permit in a business district and within 200 feet of a hospital the use and occupancy of an existing building as a garage for the storage of more than five (5) motor vehicles.

PREMISES AFFECTED—32-36 West 100th street, Manhattan.

APPEARANCES—

For Applicant: John J. Dunnigan.

For Opposition: None.

ACTION OF BOARD—Application granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan, Guilfoyle and Fire Chief Kenlon 5
Negative 0
Absent 0

THE RESOLUTION:

(270-25-BZ)

WHEREAS, John J. Dunnigan, for Schinasi Commercial Company, owner, filed, March 10, 1925, an application, under

MINUTES

the building zone resolution, to permit in a business district and also within 200 ft. of a hospital, the use of an existing building as a garage for the storage of more than five (5) motor vehicles; premises 32-36 West 100th street, Manhattan; and

WHEREAS, a public hearing was held on this application by the board of standards and appeals, at its regular meeting, December 22, 1925, after due notice by publication in the Bulletin of the Board of Standards and Appeals; and

WHEREAS, the use district maps accompanying the building zone resolution show that West 100th street is in a business district, and that Central Park West is in a residence district; and

WHEREAS, the decision of the superintendent of buildings, rendered February 20, 1925, reads:

"Sec. 4, Art. 2 of Building Zone Resolution prohibits a public garage for more than five cars in a business district. Sec. 20, Art. 5, also prohibits a garage within 200 ft. of a hospital. There is a hospital at the southwest corner of Central Park West and 100th St., which is within 200 ft. of the proposed garage.";

and

WHEREAS, the existing building is of fireproof construction, three and seven stories in height, with a frontage of 75 ft. and a depth of 100.11 ft.; to be occupied as a garage for the storage of more than five (5) motor vehicles; and

WHEREAS, the applicant filed a substantial number of consents of affected property owners and the board concluded there would be practical difficulties and unnecessary hardship in the way of carrying out the strict letter of the law.

Resolved, that the board of standards and appeals does hereby *make a variation* in the application of the use district regulations of the building zone resolution, and that the application be and it hereby is *granted on condition* that the structure be not increased in area, height or dimensions; that the garage use shall be limited to the four lower stories; that the use of the three upper floors shall be limited to dead storage occupancy or other conforming use; that the structure throughout shall be equipped with an approved sprinkler system; that the windows on the easterly gable wall, other than the windows of the top story, shall be built up with approved masonry, and that any existing iron shutters on these window openings shall be removed; that any gasoline storage equipment installed shall be located in the easterly 25-foot four-story section at the street front; that a standard approved fire escape shall be erected on the rear of the building, with egress from the termination at the yard level to any yard of adjoining premises, with egress therefrom to street; that the existing rear staircase shall be enclosed in approved masonry walls, and existing frames of exterior windows shall be removed, and this rear staircase maintained as a fire tower, with egress from the termination on the level of the 1st story platform to the westerly 25-ft. section, protected with a self-closing fireproof door, in addition to a fireproof enclosed stairway at front of building leading directly to street; that there shall be no signs erected or advertising permitted on the front of the building, other than one electric projecting sign erected approximately at the center of the building; that there shall be not less than two interior vertical exits, one of which shall be the tower hereinabove described, enclosed in approved masonry construction, and that an approved horizontal exit shall be provided between the 25-ft. and 50-ft. sections on each of the four lower stories; that all permits necessary for the prosecution of the work shall be obtained within nine months and the work completed within one year from the date of this action.

CASES DISMISSED.

BUILDING ZONE APPLICATIONS.

The chairman called attention to the following cases, where notices of intention to appeal were offered for

filing, but where, despite notices from this office, papers have not been completed, thus tying the hands of the administrative official in the performance of his duty:

(437-25-BZ)

Filed April 22, 1925—Premises southeast corner of 219th street and Bronx Park boulevard, The Bronx. Decision of superintendent of buildings. Applicant, Richard Morrison. Dismissed for lack of prosecution.

(534-25-BZ)

Filed May 22, 1925—Premises 208-214 Greenpoint avenue, Brooklyn. Decision of superintendent of buildings. Applicant, Mac L. Reiser. Dismissed for lack of prosecution.

(666-25-BZ)

Filed June 26, 1925—Premises east side of Jerome avenue, 165.02 feet north of East 174th street, The Bronx. Decision of superintendent of buildings. Applicant, Chas. Freymberg & Son. Dismissed for lack of prosecution.

(695-25-BZ)

Filed July 3, 1925—Premises southeast corner of Roosevelt avenue and Stone street, Woodside, Queens. Decision of superintendent of buildings. Applicant, Frank Leslie Remey. Dismissed for lack of prosecution.

(844-25-BZ)

Filed August 19, 1925—Premises 967 Aldus street, The Bronx. Decision of superintendent of buildings. Applicant, Thomas B. Leahy. Dismissed for lack of prosecution.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Commissioners Connell, Flanagan and Guilfoyle....	4
Negative	0
Absent: Fire Chief Kenlon.....	1

THE RESOLUTION:

WHEREAS, the foregoing applicants have filed applications with the board of standards and appeals from orders affecting the premises in question; and

WHEREAS, the applicants have failed to complete their papers, though duly notified to do so.

Resolved, that the foregoing applications be and they hereby are *dismissed* for lack of prosecution.

AREAS FIXED.

(1057-25-BZ)

The chairman presented and read a communication from Gardiner Conroy, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises 885-905 Lefferts avenue, Brooklyn.

The following area was approved by the board:

Both sides of East New York avenue and Lefferts avenue from Montgomery street to a point 400 feet west of the premises in question; both sides of Utica avenue from a point 100 feet south of East New York avenue to a point 400 feet north of the proposed garage; also the south side of Montgomery street from Utica avenue to a point 150 feet east of Utica avenue.

(1113-25-BZ)

The chairman presented and read a communication from George S. Clarke, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises north east corner Rogers place and East 163rd street, The Bronx.

The following area was approved by the board:

Both sides of Rogers place from a point 200 feet south of East 163rd street to a point 400 feet north of the premises in question; both sides of East 163rd street from Kelly street to Stebbins avenue; both sides of Westchester avenue from Kelly street

MINUTES

to Stebbins avenue; and also the westerly side of Intervale avenue from Westchester avenue to East 163rd street.

(1066-25-BZ)

The chairman presented and read a communication from Roland Lievendag, requesting the board to fix the area deemed affected and within which to obtain consents for the erection and maintenance of a garage; premises northwest corner of Queens avenue and 24th street, Queens.

The following area was approved by the board:

Both sides of Queens avenue from 162nd street to a point 200 feet east of 164th street; both sides of 164th street from Queens avenue to a point 400 feet north of the premises in question, and also the easterly side of 163rd street from Queens avenue to a point 157 feet north of Queens avenue.

Adjourned, 4:00 p. m.

JAMES O'CONNOR, *Secretary*.

THE RESOLUTION:

(800-25-S)

WHEREAS, Buchman & Kahn, for J. Ackerman Coles, owner, filed, August 4, 1925, a petition with the board of standards and appeals for variation from the requirements of the labor law as cited in a decision of the superintendent of buildings, affecting premises 15-19 West 39th street, Manhattan; and

WHEREAS, the decision of the superintendent of buildings, Application No. 217, reads:

"11. Lights in windows should comply with section 264 of the labor law.

"Lights should not exceed 720 sq. in.";

and

WHEREAS, the building is fireproof, 16 stories in height, 62 ft. 6 in. by 89 ft. 9 in. in area; OCCUPIED on the 1st and 2nd stories for stores and showrooms, upper stories as show rooms, office and 25 per cent of area used for manufacturing, approximately 80 persons per story; and

WHEREAS, there are openings on the 1st and 2nd stories in the street walls of the building, glazed with plate glass in metal frames, the maximum area of the glass on the 1st story being 10 ft. 6 in. by 13 ft. and on the 2nd story being 6 ft. by 7 ft. 6 in.; and

MINUTES

WHEREAS, the petitioner contends that a strict compliance with the labor law as to the area of the glass would detract from the architectural appearance of the building and also would destroy the proposed use of these two stories.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the windows on street front on the two lower stories, *on condition* that all openings shall be equipped with approved metal frames and sash, glazed with polished plate glass not less than one-quarter inch in thickness, and that the requirements of the labor law shall be complied with in all other respects.

THE RESOLUTION:

(837-25-S)

WHEREAS, Samuel Rosenblum, for Julius Bernstein, owner, filed, August 17, 1925, a petition with the board of standards and appeals for a variation from the requirements of the labor law, as cited in order of the fire commissioner, affecting premises 184 Boerum street, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated August 17, 1925, reads:

"Order 48777-LD:

"1. Provide safe and unobstructed egress from the lower termination of the fire escape at the north side of building by constructing a fireproof passageway with an unobstructed width of at least 3 ft. throughout, leading to the street, adequately lighted at all times during working hours, or by means of providing access to an open area having communication with the street, as per Sec. 273 of Labor Law."

WHEREAS, the building is located on the rear of lot and is non-fireproof, five stories in height, 25 ft. by 35 ft. in area. OCCUPIED: 1st story, storage of rags, 2 persons; 2nd story, manufacturing shoes, 5 persons; 3rd story, manufacturing coats, 4 persons; 4th story, manufacturing shoes, 2 persons; 5th story, vacant; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: An interior wooden stairway, extending from the 1st story to top story, enclosed in wood (board) partitions with wood metal-covered doors at openings; a wooden ladder to roof scuttle; a fire escape on the front of the building, having fireproof openings along the course thereof, extending from top story to the ground; a gooseneck ladder to roof; with EGRESS from the termination of the fire escape by means of gate in fence to yard at east, also through 1st story hall of non-fireproof building on front of lot; no adjoining buildings; and

WHEREAS, the petitioner claims the existing exits from foot of front fire escape through 1st story hall of front building and gate in fence to yard at east are adequate;

in view of the small building and light occupancy, petitioner requests the board to accept the existing exits without further change.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects egress from the termination of the fire escape of the building at the rear of the premises, *on condition* that an opening shall be provided in the fence to the adjoining property to the east, and an open and unobstructed passageway on the ground floor of the tenement building at the front of the building to the street shall be maintained free and unobstructed.

Absent	0

THE RESOLUTION:

(368-25-S)

WHEREAS, Croker Natl. Fire Prev. Eng. Co., for Estate of Paul J. Byck, lessee, filed, April 4, 1925, a petition with the board of standards and appeals from an order of the fire commissioner, affecting premises 582 Fifth avenue, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated November 11, 1924, reads:

"Order No. 67732-LD:

"1. Arrange the fire escape on the rear of the building and the openings leading thereto and the windows opening on the course thereof, so that same are in compliance with the provisions of Sections 273 and 274 of the Labor Law. * * *.

"NOTE:—Among the defects noted on this fire escape are the following:

"No safe passageway to street from termination. No 60 degree stairways connecting balconies. No openings 2 ft. by 6 ft. provided. No steps provided from floor to sills of openings.

"2. Provide additional means of exit from the front portion of the 2nd story, and from the front and rear portion of the cellar, remote from the existing exit, in accordance with the requirements of Section 271 of the Labor Law."

and

WHEREAS, the building is non-fireproof, six stories and basement in height, 25 ft. by 100 ft. in area at 1st and 2nd stories; 25 ft. by 90 ft. in area at 3rd story; and 25 ft. by 65 ft. 6 in. in area above. OCCUPIED: Cellar, front, stock room; rear, locker room; 1st floor, front, store, 7 persons; rear, bank, 15 persons; 2nd floor, front, jeweler, 4 persons; rear, bank, 7 persons; 3rd floor, gowns and hats, 4 persons; 4th floor, shoes, 8 persons; 5th floor, tailor, 4 persons; 6th floor, photographer, 3 persons. EXITS: An interior non-fireproof stairway, extending from the 1st story to roof, enclosed in fire retarded partitions, with fire doors at openings; horizontal openings in the basement, 1st and 2nd stories, leading to the bank building to the south;

MINUTES

a fire escape on the rear of the building having fireproof openings along the course thereof, extending from the main roof to the roof of the 1st story extension; with EGRESS from the termination of the fire escape by means of fire escape balcony of the building to the north; ROOFS of adjoining buildings to north 7 ft. higher; to south 4 stories higher; and

WHEREAS, petitioner contends that it would be a hardship to remove the existing fireproof double-hung windows and to provide the 2 ft. by 6 ft. openings leading to the fire escape; that the existing means of egress from the termination of the fire escapes are adequate; that owing to the bank occupancy at the rear of basement and 1st and 2nd stories, it is not possible to provide additional exits from these stories through those portions, but proposes to provide in the front of basement an engineer's ladder, leading to the sidewalk.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects egress from the termination, on condition that the existing fire escape shall be connected with the second story balcony of the adjoining fire escape to the north, all openings on the course to be made fireproof and self-closing; granted, as to Item No. 2, on condition that not less than two approved horizontal exits shall be provided to the adjoining property to the north at the second story level, and granted on condition that all factory use and occupancy shall be vacated and discontinued on or about February 1, 1927, and granted only so long as the existing conditions, until that date, remain unchanged.

582-25-S.

PETITIONER—The Fire Hazard Bureau, for Codington Co., Inc., owner.

SUBJECT—Variation of labor law as cited in orders of fire commissioner.

PREMISES AFFECTED—113 Nassau street, Manhattan.

APPEARANCES—

For Petitioner: George M. Wood.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition denied.

THE VOTE TO GRANT—

Affirmative: Commissioner Guilfoyle.....	1
Negative: Chairman Walsh, Commissioners Connell, Flanagan and Fire Chief Kenlon	4
Absent	0

THE RESOLUTION:

(582-25-S)

WHEREAS, The Fire Hazard Bureau, for Kleins Rapid Shoe Repair Co., Inc., lessee, filed, June 5, 1925, a petition for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises No. 113 Nassau street, Borough of Manhattan; and

WHEREAS, the orders dated March 18, 1925, read:

(73899-LD)—

"1. Remove the substandard fire escape on the front of building or reconstruct same as per Section 274 of the Labor Law and Rule 3 of the Board of Standards and Appeals amended May 9th, 1924.

"Among the defects noted are the following: Windows on course not fireproof, self-closing. No 60 degree connecting stairway."

(73900-LD)—

"1. Provide approved self-closing fire doors at openings leading to stairway on 2nd story, opening outwardly so as not to obstruct the stairway, as per Section 271 of the Labor Law and Rule 507 of the Industrial Code.";

and

WHEREAS, the building is non-fireproof, six stories in

height, 25 ft. by 85 ft. in area. OCCUPIED: 1st story, shoe repairing; 2nd story, restaurant, 5 persons; 3rd story, rubber stamps, 7 persons; 4th story, printing, 3 persons; 5th and 6th stories, vacant. EXITS: An interior wooden stairway, extending from the 1st story to top story; enclosed in metal covered partitions with metal covered doors at openings; a substandard fire escape on the rear of the building, having fireproof openings along the course thereof, extending from roof to the ground; with no means of EGRESS from the termination of the rear fire escape; ROOFS of adjoining buildings 10 ft. higher at north and south; and

WHEREAS, the petitioner claims that there are double swinging glass panel doors opening from the restaurant to main stairway; that there is also a stairway from rear of restaurant leading to 1st story, then to adjoining building at north through opening in party wall, which is provided with a self-closing fire door; that all cooking is done in the adjoining building; that to remove the substandard fire escape would cause an expense uncalled for; that such fire escape may be of passable service.

Resolved, that the order of the fire commissioner be and it hereby is affirmed, and the petition be and it hereby is denied.

THE RESOLUTION:

(747-25-S)

WHEREAS, George and Edward Blum, for Grokosh Realty Corp., owner, filed, July 17, 1925, a petition with the board of standards and appeals from an order of the superintendent of buildings, affecting premises 236-238 West 30th street, Manhattan; and

WHEREAS, the order of the superintendent of buildings, N. B. 219-25, dated July 13, 1925, reads:

"No window panes may exceed 720 sq. in. in area, section 264-7 of Labor Law.";

and

WHEREAS, the building is fireproof, 14 stories in height, 52 ft. 10 in. by 98 ft. 9 in. in area; OCCUPIED as offices and 25 per cent manufacturing; about 70 persons on each story; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Two interior fireproof stairways, extending from the 1st story to the roof; enclosed in fireproof partitions with fireproof doors at the openings; and

WHEREAS, the petitioner proposes to install 1/4 in. plate glass windows on the street front; the maximum size at the 1st story 9 ft. 10 in. by 5 ft. 4 1/2 in.; at 2nd story 6 ft. 11 in. by 5 ft.; at 3rd story 7 ft. 2 in. by 5 ft.; he claims by complying with the strict letter of the labor law would mar the architectural effect of the building.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the windows on the three lower stories at the street front, on condition that these openings shall be equipped with approved metal frames and sash and glazed with polished plate glass not less than 1/4 in. in

MINUTES

thickness, and that the requirements of the labor law shall be complied with in all other respects.

THE RESOLUTION:

(421-25-S)

WHEREAS, S. J. Roth, for the 140 West 23rd St. Corp., owner, filed, April 20, 1925, a petition with the board of standards and appeals for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 136-140 West 23rd street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated September 30, 1924, reads:

"L. D. 65263—1. Provide an additional means of exit from the cellar, said exit to be located at the rear of building in accordance with the provisions of Sec. 271 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, five stories and basement in height, 62 ft. 6 in. by 98 ft. 9 in. in area at 1st story and 62 ft. 6 in. by 88 ft. in area above. OCCUPIED: Basement, carpenter shop, 4 persons; 1st story, stores, 20 persons; upper stories, tenant factory, 240 persons above 1st story; EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: An interior iron stairway, extending from the 1st story to roof; enclosed in fireproof partitions with fire doors at openings; a fire escape on the rear of the building, having fireproof openings along the course thereof, extending from roof to the rear yard; with EGRESS from the termination of the fire escape by means of property at rear; ROOFS of adjoining buildings 20 ft. lower; and

WHEREAS, petitioner proposes to provide an engineer's ladder at the front of the basement, leading to sidewalk, and to provide also at the rear of the basement a double-rung iron ladder leading to the yard.

Resolved, that the order of the fire commissioner be and it hereby is affirmed, and the petition be and it hereby is denied.

THE RESOLUTION:

(745-25-S)

WHEREAS, Henry I. Oser, for 220 West 29th Street Corporation, owner, filed, July 17, 1925, a petition for variation from the requirements of the labor law, as cited in a decision of the superintendent of buildings, affecting premises 214-226 West 29th street, Borough of Manhattan; and

WHEREAS, the decision of the superintendent of buildings, rendered July 13, 1925, reads:

"3. No panes should exceed 720 square inches in area. Section 264-7 of Labor Law.";

and

WHEREAS, the building is fireproof, 16 stories in height, 149 ft. 3¾ in. by 98 ft. 9 in. in area; OCCUPIED as a factory building; about 120 persons on each story; EQUIPPED with a sprinkler system. EXITS: Three interior fireproof stairways, extending from the 1st story to roof, enclosed in fireproof partitions with fireproof doors at openings; and

WHEREAS, the petitioner proposes to install plate glass windows on the street front, the maximum sizes, 1st story, 40 sq. ft.; 2nd story, 30.5 sq. ft.; 3rd story, 13 sq. ft.; that the front windows of the first three stories are to be used for the display of merchandise; to subdivide them into small sections would defeat this purpose.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the windows on the three lower stories at the street front, on condition that all openings shall be equipped with approved metal frames and sash and glazed with polished plate glass not less than ¼ in. in thickness, and that the requirements of the labor law shall be complied with in all other respects.

THE RESOLUTION:

(779-25-S)

WHEREAS, 86th Street and Third Avenue Corporation, lessee, filed, July 27, 1925, a petition for variation from the requirements of the labor law as cited in an order of the fire commissioner, affecting premises 164-6 East 86th street and 1542 Third avenue, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated July 3, 1925, reads (Order No. 81863-LD):

"1. Reduce the area of wire glass in doors leading to stair halls, southeast end of building on 4th story and northwest end of building at 2nd and 3rd stories so that same does not exceed 720 square inches and no one pane to exceed 360 square inches as per Rule 505 of the Industrial Code.

"2. Remove the substandard fire escape on the north side of the building or reconstruct same as per Section 274 of the Labor Law and Rule 3 of the Board of Standards and Appeals adopted May 9, 1924.

"Among the defects noted are the following: Windows on course not fireproof, self-closing;"

and

WHEREAS, the building is non-fireproof, four and five stories in height, 100 feet 3 inches by 51 feet 4 inches in area. OCCUPIED: 1st story, stores; 2nd story, restaurant, 100 persons; 3rd story, billiard room, 75 persons; 4th and 5th stories, manufacturing, 15 persons, each story. EQUIPPED with a fire alarm signal system. EXITS: Two interior wooden stairways, extending from the 1st story to roof of 4-story section and to top story of 5-story section, enclosed in terra cotta block partitions with metal covered sash doors at openings; a fire escape on the 86th street front of the building, having non-fireproof openings along the course thereof, extending from top story to 2nd story; counterbalanced stairs to sidewalk; ROOFS of adjoining buildings 22 feet lower at west; 10 feet higher at south; and

WHEREAS, the petitioner proposes to comply with that part of order affecting the southeast stair hall at 4th story; he claims, with regard to the northwest stair hall, that there are 171-3 square feet of glass at 2nd story

and 11 square feet at 3rd story, the maximum size of glass being 890 square inches and 832 square inches, respectively; he further contends that there is no fire hazard existing.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the glass panel in the door in the north-west stairhall, *on condition* that the area of glass shall not exceed 720 square inches; *granted*, as to Item No. 2, only so far as it affects windows on the top story on the course of the fire escape.

THE RESOLUTION:

(797-25-S)

WHEREAS, Charles H. Bellows, for Bel-For Realty Corp., owner, filed, August 3, 1925, a petition with the board of standards and appeals for a variation of the requirements of the labor law as cited in order of fire commissioner, affecting premises 476-478 Broome street and 62 Wooster street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, No. 81516-LD, dated June 30, 1925, reads:

"1. Remove the sub-standard fire escapes on the Wooster street side of building or reconstruct same as per Sec. 274 of the Labor Law and Rule 3 of the Board of Standards and Appeals, adopted May 9, 1924. Defects are as follows:

"Windows on course not fireproof, self-closing; not 60 degree connecting stairs; no drop ladder in guides;"

and

WHEREAS, the building is non-fireproof, six stories in height, 50 ft. by 76 ft. in area on Broome street and 25 ft. by 76 ft. in area on Wooster street. OCCUPIED: 1st story, stores; 2nd story, manufacturing leather goods, 34 persons; 3rd story, metal and stamping works, 12 persons; 4th story, manufacturing ink pads, 5 persons; 5th story, manufacturing novelties, 10 persons; 6th story, dyeing works, 10 persons. EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Two interior wooden stairways, extending from the 1st story to roof, enclosed in fireproof partitions with fireproof doors at openings; a sub-standard fire escape on the Wooster street front of the building, having non-fireproof openings along the course thereof, extending from top story to the 2nd story; ROOFS of adjoining buildings, 18 ft. lower at east, 8 ft. lower at west; and

WHEREAS, the petitioner contends that the sub-standard fire escape on Wooster street front may be of some value in case of an emergency; that the occupancy is small; and requests the board to permit the said fire escape to remain without change.

Resolved, that the order of the fire commissioner be and it hereby is *affirmed*, and the petition be and it hereby is *denied*.

THE RESOLUTION

(819-25-S)

WHEREAS, Claire I. Hall, owner, filed a petition with the board of standards and appeals, August 10, 1925, for a variation of the labor law as cited in order of the fire commissioner, affecting premises 1104-1106 Fulton street, Borough of Brooklyn; and

WHEREAS, the order of the fire commissioner, dated April 1, 1925, reads:

"Order No. 75002-LD.

"1. Arrange the fire escape on the south side of building and the openings leading thereto and the windows opening on the course thereof, so that same are in compliance with the provisions of Sec. 273 and 274 of the Labor Law. * * * NOTE: Among defects is the following:

"No fireproof passageway from termination to street.

"2. Arrange the fire escape on the north side (front building) and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Sec. 273 and 274 of Labor Law. * * * NOTE: Among defects noted is the following:

"No counter-balanced stairway from lowest balcony to street.";

and

WHEREAS, the building is non-fireproof, three and four stories in height, 44 ft. by 105 ft. in area, the 1st story and basement open throughout. OCCUPIED: Basement and 2nd, 3rd and 4th stories of rear section, laundry; 1st story, stores; upper stories of front section, dwelling; 21 persons above the 1st story in rear section and in the front section 6 persons above the 1st story. EXITS: Two interior wooden stairways extending from the 1st story to top story, enclosed on 1st story only with wood stud and plaster partitions with wooden doors at openings; a fire escape on the front of the building having fireproof openings along the course thereof, extending from top story to the 2nd story, with drop ladder to street; a 45 degree fire escape on the rear of the building, having fireproof openings along the course thereof, extending from the roof to the rear yard; with EGRESS from the termination of the fire escape by means of adjoining yard and building to street. ROOFS of adjoining buildings, same elevation; and

WHEREAS, petitioner contends, having secured the consent of owner of adjoining building to west (No. 1102 Fulton street) to use said yard and building as a mode of egress from the termination of the fire escape in question to street; and re: fire escape on front of building, petitioner contends that it is an adequate means of egress for the occupants of the dwelling portion of the premises.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, as to Item 1, only so far as it affects the egress from the termination of the fire escape, *on condition* that a 36 inch wide balcony be provided at the first story level extended to embrace the entire rear of the building with egress therefrom to adjoining premises to the west, and that a 45 degree stairs shall be provided from the basement level up to the first story balcony, all skylights under the balcony at the first story to be glazed with wire glass; *granted* as to Item No. 2, *on condition* that a counterbalanced drop ladder in guides shall be provided at second story balcony of front fire escape and that the underside of the lowest balcony shall be provided with flame shield and that the windows opening on the second story balcony of front fire escape shall be fire proofed, and *granted* only so long as the present occupancy remains unchanged.

THE RESOLUTION:

(840-25-S)

WHEREAS, Samuel Rosenblum, for Liberty Place Hldg. Co., owner, filed, August 18, 1925, a petition for variation from the requirements of the labor law as cited in an order of the fire commissioner, affecting premises No. 1239 Broadway, Borough of Manhattan; and

WHEREAS, the order, dated July 8, 1925, reads (82031-LD):

"2. Remove all combustible articles from hallway, east side (candy and cigar stand), as per Rule 5 of the Board of Standards and Appeals, adopted July 29, 1924."

and

WHEREAS, the building is fireproof, 16 stories in height, 39 feet 8¾ inches by 249 feet. 3 inches, irregular in area. OCCUPIED: As a tenant factory, about 30 persons on each story. EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: Three interior fireproof stairways, extending from the 1st story to roof; enclosed in fireproof partitions with fireproof doors at openings; and

WHEREAS, the petitioner claims the cigar stand was installed shortly after the erection of the building in 1915; that it does not obstruct the exit capacity; that the building extends from street to street and is provided with exceptionally good exit facilities; he requests the board to permit the candy and cigar stand to remain in entrance hall without change.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, for a temporary period of one year from the date of this action, *on condition* that there shall be no open flame maintained on the stand and that a plain polished plate glass shield, not less than 2 ft. 6 in. in height, shall be pro-

MINUTES

vided on the south end of the counter, thereby restricting service to the front of the counter, and *on further condition* that merchandise use shall be restricted to retail tobacco and candies service.

854-25-S.

PETITIONER—Mrs. Florence C. Degelman, for Elede Co., Inc., owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—2148-2150 Third avenue, Manhattan.

THE RESOLUTION:

(854-25-S)

WHEREAS, Mrs. Florence C. Degelman, for Elede Company, Inc., owner, filed, August 21, 1925, a petition for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 2148-50 Third avenue, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated July 10, 1925, reads (Order No. 82220-LD):

"1. Arrange the fire escape on the rear of building so that same conforms to Section 273 of the Labor Law and Rule 3 of the Board of Standards and Appeals adopted July 29th, 1924.

"Among the defects noted are the following:

"No stairway from balcony 2nd story to roof. Windows of course not fireproof, self-closing."

and

WHEREAS, the building is non-fireproof, two stories in height, 50 ft. by 130 ft. (irregular) in area. OCCUPIED: 1st story, stores; 2nd story, dress manufacturer, 24 persons. EXITS: An interior fireproof stairway, extending from the 1st story to top story; enclosed in fire retarded partitions with fireproof doors at openings; a fire escape on the rear of the building, having fireproof openings along the course thereof, extending from 2nd story (having gooseneck ladder to roof) to the yard; with EGRESS from the termination of the fire escape by means of passageway in building to street; ROOFS of adjoining buildings, to north 15 ft. higher, to south 8 ft. higher; and

WHEREAS, petitioner contends that the roofs of the adjoining buildings are more than 8 ft. above the roof of the building in question and do not afford an adequate means of egress, and that the existing gooseneck ladder leading to the roof is adequate.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the extension of fire escape to the roof, on condition that a gooseneck ladder shall be provided from the 2nd story extension roof to the main roof, and that egress from the termination shall be maintained to the open yards of the property to the rear on 118th street, and that the partition leading from the fire escape to the 2nd story shall be removed, this exit to be maintained open and unobstructed.

Absent: Commissioner Connell, 1

THE RESOLUTION:

(859-25-S)

WHEREAS, Samuel Rothbard, for John J. Cavanagh, owner, filed, August 24, 1925, a petition from an order of the fire commissioner, affecting premises 142 West 32nd street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 73343-dated March 7, 1925, reads:

"1. Provide an outside iron balcony fire escape on the front of building with balconies 4 ft. in width, connected by stairways not less than 22 in. wide, placed at an incline of not more than 45 degrees, extending from the ground to the highest story * * *."

and

WHEREAS, the building is non-fireproof, three stories in height, 20 ft. by 49 ft. in area. OCCUPIED: 1st story, stores; 2nd story, printing, 4 persons; 3rd story, embroidery shop, 8 persons. EXITS: An interior non-fireproof stairway, extending from the 1st story to the roof; enclosed in non-fireproof partitions with wooden doors at the openings; ROOFS of adjoining buildings one story lower; and

WHEREAS, petitioner contends that the width of the building is too small to construct a 45 degree fire escape and proposes to erect a 60 degree fire escape with a drop ladder in guides to street and to provide, also, fireproof self-closing doors leading to the proposed fire escape.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the connecting stairs, on condition that they shall be of not less than 60 degrees angle and that a counterbalanced drop ladder in guides shall be provided from the lowest balcony to the street, and that the windows on the 2nd story shall be made fireproof, glazed with polished plate glass, and granted only so long as conditions as to occupancy and use remain substantially unchanged.

MINUTES

standards and appeals for variation of the requirements of the labor law, as cited in order of the fire commissioner, affecting premises 306-310 Penn street, Brooklyn; and

WHEREAS, the order of the fire commissioner, No. 73969-LD, dated March 19, 1925, reads:

"Item 2—Provide an additional means of exit from the 1st story, said exit to be located at the rear of the building in accordance with the provisions of Sec. 271 of the Labor Law.

"NOTE:—All plans for structural changes should be filed with the Bureau of Buildings, as required by Chap. 503, Laws of 1916.";

and

WHEREAS, the building is non-fireproof, three stories in height, 60 ft. by 100 ft. in area at 1st story and 60 ft. by 40 ft. in area above. OCCUPIED: 1st story, laundry, 20 persons; 2nd and 3rd stories, manufacturing, 15 persons on each story. EXITS: An interior wooden stairway, extending from 1st story to top story; enclosed in fire-retarding partitions with fireproof self-closing doors at openings; a fire escape on the front of the building, having fireproof openings along the course thereof, extending from top story to the 2nd story; a counterbalanced ladder to sidewalk; and

WHEREAS, the petitioner contends the building occupies the entire lot area; that it is entirely surrounded by other buildings on all sides except the street front; that there is an existing exit opening 8 ft. in width leading from the rear portion of building on 1st story direct to the street; he proposes to provide an additional exit and fireproof self-closing door from rear portion of the building on 1st story leading into the entrance hall, thence to the street.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted on condition* that a fire-resisting passageway shall be provided at the south end between the front and rear sections to the entrance hall, with egress therefrom direct to street, and that a doorway opening shall be provided connecting the front and rear portions at the north end of the cross partition on the 1st story, and that a doorway, unobstructed and unfastened, shall be provided to the shipping room, with egress therefrom direct to street, and that such openings shall be equipped with self-closing fireproof doors, and *granted* only so long as conditions as to occupancy and use and the size and dimension and area of the building remain unchanged.

PETITIONER—Charles B. Walker, for A. E. and I. W. Hayes, owners.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—174 Wooster street, Manhattan.

APPEARANCES—

For Petitioner: Walter J. Murtagh.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Flanagan, Guilfoyle and Deputy Fire Chief Martin 4
Negative 0
Absent: Commissioner Connell, 1

THE RESOLUTION:

(867-25-S)

WHEREAS, Charles B. Walker, for A. E. and I. W. Hayes, owners, filed, August 26, 1925, a petition for variation from the requirements of the labor law as cited in an order of the fire commissioner, affecting premises 174 Wooster street, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated July 18, 1925, reads:

"1. Provide safe and unobstructed egress from the lower termination of the fire escape at the rear of building by constructing a fireproof passageway with an unobstructed width of at least three feet throughout leading to the street, adequately light at all times during working hours, or by means of providing access to an open area having communication with the street, as per section 273 of the labor law.";

and

WHEREAS, the building is fireproof, eight stories in height, 18 feet 6 inches by 96 feet 9 inches in area. OCCUPIED as a tenant factory, not more than 10 persons on each story. EQUIPPED with a fire alarm signal system. EXITS: An interior fireproof stairway, extending from 1st story to roof; enclosed in fireproof partitions, with fireproof doors at openings; a fire escape on the rear of the building, having fireproof openings along the course thereof, extending from roof to 2nd story; with EGRESS from the termination of fire escape by means of extended 2nd story balcony to premises adjoining at the south; and

WHEREAS, the petitioner contends that the extended 2nd story rear fire escape balcony is connected by iron stairway to a platform which leads directly to hallway of the fireproof building adjoining at the south; and has filed a copy of a letter permitting the use of the premises as an exit, signed by the superintendent; and requests the board to accept this means of egress in lieu of complying with the fire department order No. 83005.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the egress from the termination of the fire escape, *on condition* that fixed 45-degree iron stairs shall be provided from the balcony at the second story level to the balcony at the first story level of the building to the south with egress therefrom to open corridor, and exit direct to West Houston street, and *on further condition*, that the doorway of the first story balcony shall be maintained without lock or other fastening.

1049-25-S.

PETITIONER—Hemmerdinger Estate Corp., owner.
SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—South side of Dry Harbor road, 80 feet east of L. I. R. R., Glendale, Borough of Queens.

APPEARANCES—

For Petitioner: I. L. Weiser.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Negative 0
Absent: Commissioner Connell, 1

THE RESOLUTION:

(1049-25-S)

WHEREAS, Hemmerdinger Estate Corp., owner, filed, October 15, 1925, a petition for variation from the requirements of the labor law, as cited in order of fire commissioner, affecting premises south side of Dry Harbor road, 80 ft. east of Long Island Railroad, Glendale, Borough of Queens; and

WHEREAS, the order of the fire commissioner, No. 80045-LD, dated July 12, 1925, reads:

MINUTES

"1. Remove the sub-standard fire escapes on the east and west sides of the building, or reconstruct same as per section 274 of the labor law and rule 3, Board of Standards & Appeals, adopted May 9th, 1924. Among defects noted are the following:

"1. No stairway to roof of fire escape on the east side.

"2. No 60 degree connecting stairways—fire escape on the west side.

"3. Windows on course not fireproof, self-closing on west side.

"4. No drop ladder in guides from lowest balcony to ground."

and

WHEREAS, petitioner contends that the removal of the fire escape is entirely unnecessary; that the building is sprinklered; that he proposes to install sprinkler heads over the inside of each window on the course of fire escape and to extend the present fire escape to the ground.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, only so far as it affects the stairway from the top story balcony to the roof, on condition that a gooseneck iron ladder shall be provided from the top story balcony; granted, as to Item No. 2, on condition that connecting stairways shall be provided of not less than 60 degrees; granted, as to Item No. 3, on condition that the fire escape shall be provided with drop ladder in guides from the lowest balcony and that the other required legal exits shall be provided and maintained.

406-25-S.

PETITIONER—The Acorn Insulated Wire Co., lessee.
SUBJECT—Variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—178-192 Sullivan street, Brooklyn.

APPEARANCES—

For Petitioner: Edward P. Doyle.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Petition granted on condition.

CONDITIONS—As specified in resolution.

THE VOTE—

Affirmative: Chairman Walsh, Commissioners Flanagan, Guilfoyle and Deputy Fire Chief Martin

Negative

Absent: Commissioner Connell,

THE RESOLUTION:

(406-25-S)

WHEREAS, Acorn Insulated Wire Company, lessee, filed May 5, 1925, a petition with the board of standards and appeals for variation from the requirements of the labor law, as cited in order of fire commissioner, affecting premises 178-192 Sullivan street, Brooklyn; and

WHEREAS, the order of the fire commissioner reads:

"1. Extend the interior stairway at center of building from 2nd to 3rd story as per sec. 271 of labor law.

"2. Remove the sub-standard fire escapes (3) on the north side (3) on the south side and (1) on the east side or reconstruct same as per section 274 of labor law. Note: Among defects noted are following: Windows on course not fireproof self closing. Rusted, requires painting.

"3. Arrange fire escape on west side of building and openings leading thereto and the windows opening on course thereof so that same are in compliance with sec. 273 and 274 of labor law. * * *

"Note: Among defects noted are the following: Windows on course not fireproof, self closing. Fire escape needs painting."

WHEREAS, the building is non-fireproof, three stories in height, 158 ft. 4 in. by 197 ft. 2 in. in area, divided into two sections by brick wall. OCCUPIED: Manufacturing wire, 1st story, 10 persons; 2nd story, 100 persons; 3rd story, 3 persons. EQUIPPED with a sprinkler system and a fire alarm signal system. EXITS: An interior non-fireproof (open) stairway (at center of building), extending from the 1st story to the 2nd story, a similar stairway at northwest corner of building from 2nd story to 3rd story; a fire escape on the west side of the building, having non-fireproof openings along the course thereof, extending from the ground to the 3rd story, with EGRESS from the termination of the fire escape by means of open yard to street; seven sub-standard fire escapes located on the three street fronts; there are no adjoining buildings; and

WHEREAS, the petitioner claims that it is impracticable, also dangerous to comply with the fire department orders; that the windows are provided with iron shutters; that the present means of exits are adequate and request the board to rescind orders No. 6889-LD and No. 6881-LD, requiring interior extended, removable or sub-standard fire escapes, arrangement of fire escape at west to conform to law and a continuous, safe and unobstructed passageway leading from interior stairway to the street.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 1, on condition that a fixed double-rung iron ladder shall be provided to the scuttle in the roof; granted, as to Item No. 2, on condition that the windows shall be equipped with iron shutters; and connecting stairs of not less than 60 degrees shall be provided; granted, as to Item No. 3, on condition that the windows shall be equipped with movable iron shutters and that fire escape shall be properly painted and maintained structurally safe, and on further condition that all required legal exits shall be maintained.

Absent: Commissioner Connell,

THE RESOLUTION:

(743-25-S)

WHEREAS, Deiches, Goldwater & Flynn, for Duplex Motion Picture Industries, Inc., owner, filed, July 14, 1925, a petition for variation from the requirements of the labor law as cited in an order of the fire commissioner, affecting premises 74-78 Sherman place, Long Island City, Borough of Queens; and

WHEREAS, the order of the fire commissioner, dated October 7, 1924, reads (Order No. 65901-LD):

"1. Provide an exterior enclosed fireproof stairway at the east side of building, not less than 44 inches in width extending from 1st story to roof, to serve as a required means of exit, constructed as per Sec-

MINUTES

tion 266 or carry out a proper alternative method of complying with the Section 271 of the Labor Law.”; and

WHEREAS, the building is fireproof, five stories, mezzanine and basement (81 feet) in height, 75 feet 1½ inches, by 100 feet in area at 1st story, and 75 feet 1½ inches by 90 feet in area above. OCCUPIED: Basement, developing; 1st story, printing, 2 persons; mezzanine, photographing, 2 persons; 2nd story, offices, 25 persons; 3rd story and 4th story, rug cleaning, 10 persons; 5th story, manufacturing machines, 15 persons. EQUIPPED with a sprinkler system. EXITS: An interior fireproof stairway, extending from the 1st story to roof, enclosed in fireproof partitions with fire doors at openings, and exterior stairs on the rear of the building, having fireproof openings along the course thereof, extending from roof to the 2nd story; with EGRESS from the termination of the fire escape by means of long platform to a stairway and drop ladder to yard of adjoining premises at south; ROOFS of adjoining buildings, 4 stories lower at west; open yard at east; and

WHEREAS, the petitioner claims that the building is fireproof with adequate means of exit facilities; that the exterior stairs on rear of building has its termination in the yard of adjoining premises at south which is under the same control as the owners of the premises in question; in consideration of the small occupancy, he requests the board to accept the existing exits without change.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted on condition* that the building shall be not increased in height, area or dimension, and shall be equipped with a two-source sprinkler system; that an approved exterior stairway shall be provided on the rear of the building with egress at the termination to the property at the rear in the same ownership, egress therefrom to be maintained open and unobstructed direct to the street to the south.

749-25-S.

PETITIONER—Margaret Murphy Drew, for Helen A. Wissman, owner.

SUBJECT—Variation of labor law as cited in order of fire commissioner.

THE RESOLUTION:

(749-25-S)

WHEREAS, Margaret Murphy Drew, for Helen A. Wissman, owner, filed, July 17, 1925, a petition for variation from the requirements of the labor law, as cited in an order of the fire commissioner, affecting premises 732 Broadway, Borough of Manhattan; and

WHEREAS, the order of the fire commissioner, dated July 8, 1925, reads (Order No. 76550-LD):

“1. Enclose the interior stairway serving as a required means of exit with partitions of fire resisting material from floor of 1st story to the underside of the 2nd story, including any exposed soffits, landings and passageways. Openings shall be provided with approved self-closing fire doors as per Rule 2 of the Board of Standards and Appeals adopted July 29, 1924.”;

and

WHEREAS, the building is non-fireproof, four stories in height, 24 ft. by 126 ft. in area at 1st story, 24 ft. by 96 ft. in area above at 2nd story, and 24 ft. by 56 ft. in area above. OCCUPIED: 1st story, restaurant; 2nd story, offices and stock, 9 persons; 3rd story, manufacturing suits, 9 persons; 4th story, manufacturing caps, 5 persons; EQUIPPED with a fire alarm signal system. EXITS: An interior wooden stairway, extending from the 1st story to top story; enclosed in lath and plaster partitions with wooden doors at openings; a fire escape on the rear of the building, having fireproof openings along the course thereof, extending from roof to the roof of the 2nd story extension, thence to roof of 1st story extension; with EGRESS from the roof of 1st story extension to the 2nd story party wall fire escape on the rear of building adjoining at north; ROOFS of adjoining buildings 16 ft. higher at north, 40 ft. higher at south; and

WHEREAS, the petitioner contends that the stair enclosure at 1st story is covered with hard wood frames and plate glass mirrors, and that to comply with the order would mean the suspension of business; in consideration of the small occupancy he requests that the board accept the existing exits without change.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, only so far as it affects the stairs on the 1st story, *on condition* that the soffit of the stairs and stair side of the stairway enclosing partition in the first story shall be made fire-resisting in accordance with the rules of the board of standards and appeals.

THE RESOLUTION:

(675-25-S)

WHEREAS, John Street M. E. Church Trust Fund Society, owner, filed, June 30, 1925, a petition for variation from the requirements of the labor law, as cited in orders of the fire commissioner, affecting premises 48 John street, Borough of Manhattan; and

WHEREAS, the orders of the fire commissioner, dated March 30, 1925, reads:

“Order No. 74802-LD—

“1. Enclose the interior stairway at east side of building serving as a required means of exit, and the landings, platforms and passageways connecting therewith on all sides with partitions of fire resisting material extending continuously from the sub-cellar to 3 feet above the roof, constructed as per Sec. 271 of the Labor Law (and Rule 2 of the Industrial Code) or carry out a proper alternative method of complying with the requirements of Sec. 271 of the Labor Law.

“2. Arrange the fire escape on the rear of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Sec. 273 & 274 of the Labor Law, and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with the requirements of Sec. 271 of the Labor Law. Among the defects noted are the following:

MINUTES

"(1) No balcony on 5th and 6th stories. (2) No fireproof passageway from termination to street. (3) Rusted—requires painting. (4) Not screened to height of 4 ft. 6 in."

Order No. 74804-LF—

"1. Install an adequate interior electric fire alarm system in accordance with the Rules of the Board of Standards and Appeals and the enclosed approved layout."

Order No. 74805-LF—

"An inspection of the premises 48 John Street, Borough of Manhattan, shows that a fire drill should be established and maintained therein according to the requirements of Section 279 of the Labor Law."

and

WHEREAS, the building is non-fireproof, six stories, cellar and sub-cellar in height, 19 ft. by 85 ft. 6 in. in area from 1st story to 4th story and 15 ft. 6 in. by 35 ft. 6 in. in area above; OCCUPIED as a factory building, stationers and printers; about 13 persons on each story, except the 5th and 6th stories, which are for storage only. EXITS: An open interior wooden stairway, extending from the 1st story to top story; ladder to roof scuttle; a fire escape on the rear of the building, having fireproof openings along the course thereof, extending from 1st story to the 4th story only, no balcony at 5th and 6th stories; drop ladder to yard; with EGRESS through church to street; ROOFS of adjoining buildings same height; and

WHEREAS, the petitioner claims that the property is owned by a charitable organization which would be financially embarrassed if forced to comply with the fire department orders; and he further contends that the building is small and within the strict sense of the word should not be classed as a "factory."

Resolved, that the orders of the fire commissioner be and they hereby are affirmed, and the petition be and it hereby is denied.

THE RESOLUTION:

(1205-25-S)

WHEREAS, the Croker National Fire Prevention Engineering Company, for Charles Schnabel, owner, filed, November 20, 1925, a petition for variation of the requirements of the labor law, as cited in order of fire commissioner, affecting premises 52 West 28th street, Manhattan; and

WHEREAS, the order of the fire commissioner, No. 78669-LD, dated May 29, 1925, reads:

"1. Provide outside iron balcony fire escape * * *.

"2. Extend interior stairway at the east side of building to the roof."

and

WHEREAS, the building is non-fireproof, four stories in height, 20 ft. by 50 ft. in area in the 1st story and 20 ft. by 40 ft. in area above. OCCUPIED: 1st story, stores, upper stories, tenant factory, furriers and ladies' coats, 10

persons above the 1st story; the means of EGRESS consisting of an interior stairway extending from 1st story to top story, enclosed in lath and plaster partitions with wood and metal covered doors at openings and scuttle and iron ladder to roof from stairhall enclosure; and

WHEREAS, the petitioner proposes to provide a fire escape on the rear of the building with 60 degree connecting stairs and a landing on extension roof, with egress from extension roof across the adjoining extension, and requests the acceptance of the proposed fire escape and the existing scuttle and iron ladder to roof because of the small occupancy; and

WHEREAS, this petition was placed on the calendar for immediate hearing on request of the chief of the bureau of fire prevention.

Resolved, that the board of standards and appeals does hereby make a variation from the requirements of the labor law, and that the petition be and it hereby is granted, as to Item No. 1, on condition that a 60 degree fire escape shall be provided on the front of the building with counterbalanced drop ladder in guides from the lowest balcony to the ground, all openings to be made fireproof with casement doors and steps to sills; granted, as to Item No. 2, on condition that a fixed double-rung iron ladder shall be provided in the stairhall to the scuttle in roof, and that the total occupancy shall not exceed ten persons above the 1st story.

73-25-S.

PETITIONER—International Coffee Company, Inc., owner.

SUBJECT—Application for reopening—variation of labor law as cited in order of fire commissioner.

PREMISES AFFECTED—533 Greenwich street and 99-101 Vandam street, Manhattan.

APPEARANCES—

For Petitioner: Andrew S. Rubin.

For Administration: Inspector Maher of fire department.

ACTION OF BOARD—Resolution modified.

CONDITIONS—As specified in resolution.

THE VOTE TO MODIFY—

Affirmative: Chairman Walsh, Commissioners Flanagan, Guilfoyle and Deputy Fire Chief Martin

Negative

Absent: Commissioner Connell,.....

THE RESOLUTION:

(73-25-S)

WHEREAS, International Coffee Co., owner, filed, January 19, 1925, a petition with the board of standards and appeals for variation from the requirements of the labor law, as cited in orders of the fire commissioner, affecting premises 533 Greenwich street and 99-101 Van Dam street, Manhattan; and

WHEREAS, the orders of the fire commissioner, dated October 8, 1924, read:

"Order No. 65916-LD:

"1. Arrange the fire escape on the south side of building and the openings leading thereto and the windows opening on the course thereof so that same are in compliance with the provisions of Section 273 and 274 of the Labor Law and the rules of the Board of Standards and Appeals, or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law.

"Among the defects noted on this fire escape are the following: Windows on course not fireproof, self-closing. Not screened to height of 4 ft. 6 in. No steps to window sills provided. No counterbalanced stairway from lowest balcony to ground. Connecting stairs are not placed at angle of 45 degrees. No connection of top balcony to roof.

"2. Enclose the interior stairway at center of building serving as a required means of exit, and the land-

MINUTES

ings, platforms and passageways connecting therewith on all sides with partitions of fire-resisting material extending continuously from the 1st story to 3 ft. above the roof, constructed as per Section 271 of the Labor Law or carry out a proper alternative method of complying with the requirements of Section 271 of the Labor Law."

"Order No. 65918-LD:

"1. Arrange the entrance doors at street so as to open outwardly, as per Section 271 of the Labor Law.";

and

WHEREAS, the building is non-fireproof, seven stories in height, 25 ft. by 100 ft. in area; OCCUPIED for roasting, packing and storing of coffee; the means of egress consisting of an interior stairway at the center of the building, extending from the 1st story to the roof, enclosed in wood studs covered both sides with 26 gauge metal; an interior stairway at the Van Dam street front extending from the 1st story to the 2nd story, with fire escape on the Van Dam street front of building, with balcony connected by 60 degree stairs, with gooseneck ladder to roof and drop ladder to street; ROOFS of adjoining buildings are at same level; and

WHEREAS, petitioner contends that the main occupancy is on the 2nd story from which there are three means of exit; that in the 1st story there are three exit doorways giving direct access to the street; that the upper portion of the building is used for storage only, with two persons working on the top story, and that the means of egress are adequate for the small occupancy; and

WHEREAS, this petition was granted by the board at its meeting March 24, 1925, on certain conditions and petitioner requested a modification of the conditions as to occupancy.

Resolved, that the board of standards and appeals does hereby *make a variation* from the requirements of the labor law, and that the petition be and it hereby is *granted*, as to Order No. 65916, Item 1, *on condition* that the fire escape be maintained with 60 degree connecting stairs, and that the casement doors thereto shall not be less than 5 ft. high, with gooseneck to roof and counterbalanced drop ladder in guides to street; *denied* in all other respects; and *granted*, as to Item 2, *on condition* that the occupancy above the 4th story shall not exceed two persons and that the occupancy above the 1st story shall not exceed twenty persons; and that the petition be and it hereby is *denied* as to Order No. 65918-LD, Item No. 1.

APPLIANCES SUBMITTED FOR APPROVAL.

THE RESOLUTION:

(1323-22-SA)

WHEREAS, Baker Steam Products, Inc., filed, November 6, 1922, a petition, with the board of standards and appeals, for approval of their device known as the Baker Automatic House Heating Burner Pump and Fan Set; and

WHEREAS, a committee of the board inspected this device in operation at 1721 Gates avenue, and recommended the device for approval; and

WHEREAS, the device was approved by the board at its meeting July 29, 1924, for use with Grade B fuel oil and petitioner requested its approval for use with Grade A oil.

Resolved, that the board of standards and appeals does hereby approve the device known as the Baker Automatic House Heating Burner, Pump and Fan Set, for use with Grade B fuel oil in domestic installations and for use with Grade A oil in domestic and industrial installations when installed in accordance with the fuel oil rules.

CASES DISMISSED.

VARIATIONS OF THE LABOR LAW.

The chairman called attention to the following cases, where notices of intention to appeal were offered for filing, but where, despite notices from this office, papers have not been completed, thus tying the hands of the administrative official in the performance of his duty:

(341-25-S)

Filed March 30, 1925—Premises 86-88 Meserole street, Brooklyn. Order of the fire commissioner, labor law. Petitioner, Abwer Realty Corporation. Dismissed for lack of prosecution.

(522-25-S)

Filed May 20, 1925—Premises 317-323 East 34th street, Manhattan. Decision of fire commissioner, labor law. Petitioner, Carroll Dunham Smith Pharmacal Company. Dismissed for lack of prosecution.

(559-25-S)

Filed May 25, 1925—Premises 675 Fifth avenue, Manhattan. Orders of fire commissioner, labor law. Petitioner, Hicks-Downs Realty Company. Dismissed for lack of prosecution.

(631-25-S)

Filed June 17, 1925—Premises 1 Hunter avenue, Long Island City, Queens. Order of fire commissioner, labor law. Petitioner, Louis Becker. Dismissed for lack of prosecution.

(642-25-S)

Filed June 22, 1925—Premises 28 Franklin street, Astoria, Queens. Order of fire commissioner, labor law. Petitioner, Wm. Kral & K. Kubelle. Dismissed for lack of prosecution.

(654-25-S)

Filed June 24, 1925—Premises 539 Schenck avenue, Brooklyn. Order of fire commissioner, labor law. Petitioner, Criterion Construction Company. Dismissed for lack of prosecution.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Commissioners Flanagan, Guilfoyle and Deputy Fire Chief Martin 1
Negative 0
Absent: Commissioner Connell 1

MINUTES

THE RESOLUTION:

WHEREAS, the foregoing petitioners have filed with the board of standards and appeals petitions for variations from the requirements of the labor law affecting the premises in question; and

WHEREAS, the petitioners have failed to complete the papers, though duly notified to do so.

Resolved, that the petitions be and they hereby are *dismissed* for lack of prosecution.

CASE DISMISSED. APPLIANCE.

The chairman called attention to the following case, where notice of intention to petition the board for approval of appliance was offered for filing, but where, despite notice from this office, papers have not been completed, thus tying the hands of the administrative official in the performance of his duty:

(134-25-SA)

Filed January 30, 1925—Approval of Duplex Urinal

Stall. Petitioner, Wheeling Sanitary Manufacturing Company. Dismissed for lack of prosecution.

THE VOTE TO DISMISS—

Affirmative: Chairman Walsh, Commissioners Flanagan, Guilfoyle and Deputy Fire Chief Martin 4
Negative 0
Absent: Commissioner Connell 1

THE RESOLUTION:

WHEREAS, the petitioner has filed with the board of standards and appeals a petition for approval of appliance; and

WHEREAS, the petitioner has failed to complete his papers, though duly notified to do so.

Resolved, that the petition be and it hereby is *dismissed* for lack of prosecution.

Adjourned, 7:00 p. m.

JAMES O'CONNOR, *Secretary*.

RULES

SMOKING IN FACTORIES.

Adopted by the Board of Standards and Appeals,
August 13, 1918.

RULE 1. PERMIT.

(a) **Prohibition.** No person shall smoke, or carry a lighted cigar or cigarette in any factory as defined in Article 1, Section 2, of the State Labor Law, nor in any portion of a factory, within the City of New York, except in such protected portions or special classes of occupancies as are specified in Rule 2 of these rules, and then only after the issuance of a permit by the fire commissioner.

It shall be the joint and several duty of the owner and of the lessee or lessees of the building containing such factory or factories to cause to be posted in each and every entrance hall, stairhall or room throughout the building, as well as in every elevator-car, in English, and also in such other language or languages as the fire commissioner shall direct, a notice of such prohibition, and the penalty for its violation.

(b) **Application.** Application for such permit shall be made only by the owner of the building on suitable blank forms to be furnished by the fire commissioner.

(c) **Time Limit.** Such permit shall be for a definite period, not exceeding one year, and shall not be renewed upon expiration until a reinspection of the premises for which it is issued has been made for the purpose of determining whether existing conditions warrant a renewal.

(d) **Conditions.** The permit shall state the conditions under which, the hours between which, and the place or places in such factory where smoking may be permitted, and this permit shall be framed and kept posted in a conspicuous place in the factory.

(e) **Revocation.** Violation of any of the conditions specified in the permit, in addition to incurring such penalties as are prescribed by law, shall be full and sufficient cause for the revocation of such permit by the fire commissioner, and he shall not again issue a permit for the same premises until at least one year has elapsed.

RULE 2. PERMISSIBLE CASES.

Smoking may be permitted in:—

(a) Factories engaged in the manufacture of cigars, cigarettes, or smoking tobacco, when necessary for the efficient conduct of the business, provided that:

(1) No smoking other than that for sampling, testing and experimental purposes is carried on.

(2) Such smoking is conducted in a room provided especially for that purpose, separated from the rest of the building by fireproof or fire-resisting partitions, with all openings therein protected by self-closing fire doors, and, further, unless the building is of fireproof construction or equipped with an approved automatic sprinkler system, the floor and ceiling of such room shall be covered with fire-retarding material.

(3) Such chemical fire extinguishers as the fire commissioner may direct are installed.

(4) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

(b) Factories devoted entirely to one of the following occupancies:

Blacksmithing or horseshoeing;
Boiler making;
Brick, terra cotta or artificial stone works;
Forge shops;
Foundries;
Iron, steel, brass or copper works;
Machine shops;
Smelting;
Stone or monumental works;

provided that in any case:

(1) The building is not of wooden construction;

(2) Such chemical fire extinguishers as the fire commissioner may direct are installed;

(3) All waste paper and other inflammable waste materials are deposited in fireproof receptacles.

RULES

FIRE RETARDING RULES

Adopted by the Board of Standards and Appeals August 30, 1917; Amended November 1, 1917.

Rule 1. Fire Retarding Materials for Garages, Motor Vehicle Repair Shops and Oil Selling Stations. In garages, motor vehicle repair shops and oil selling stations any material or form of construction shall be deemed fire-retarding within the meaning of §73, subdivision 3, of the building code, that resists the action of flame and heat when subjected to a continuous fire for one hour at an average temperature of seventeen hundred (1700) degrees Fahrenheit without the passage of flame, and with a maximum temperature rise to four hundred (400) degrees Fahrenheit on the side away from the fire. The point at which the temperature of transmitted heat is measured shall be protected from external air and weather conditions.

When the test specimen is in the form of partition construction, the area under test shall be not less than one hundred (100) square feet and least dimension shall be not less than nine (9) feet. When in the form of floor construction, the area under test shall be not less than two hundred (200) square feet and the least dimension shall be not less than fourteen (14) feet.

During the fire, the floor construction shall support the live load for which it is designed, and after the fire shall safely sustain twice the designed live load with a maximum deflection of not more than one two-hundredth ($1/200$) part of the span.

Rule 2. Wood Joisted Floor Construction. Wood joisted floor construction shall be accepted as fire-retarding construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations when the beams are protected on the upper and under sides with the fire-retarding materials specified in rules for floor and ceiling coverings.

Rule 3. Floor Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the upper sides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) Seven-eighths ($7/8$) inch wood underflooring protected with a membrane of two-ply waterproofing covered with not less than two and one-half ($2\frac{1}{2}$) inches of 1:2½:5 concrete or better, reinforced with not less than one-fourth ($1/4$) of one (1) per cent of steel mesh.

(b) Two and one-half ($2\frac{1}{2}$) inches of 1:2:4 concrete applied directly to the top of the joists, with or without temporary support, reinforced with not less than one-fourth of one per cent steel rods, mesh or steel lath, and having the tops of the joists coated with approved waterproof paint or protected by tar paper on the top and on the sides for a distance of three inches from the top. (Amendment, Nov. 1, 1917.)

Rule 4. Ceiling Covering. Any one of the following forms of construction shall be accepted as fire-retarding for the covering of the undersides of wood floor beams in joisted floor construction in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations:

(a) One-half ($1/2$) inch plaster boards, or three-eighths ($3/8$) inch gypsum wall boards weighing not less than 16 pounds per square yard with pointed joints covered with No. 26 U. S. gauge sheet metal with one (1) inch lapped seams nailed to the wood beams when spaced not more than sixteen (16) inches on centers, or nailed to furring strips when the floor beams are spaced more than sixteen (16) inches on centers;

(b) Two thicknesses of one-quarter ($1/4$) inch asbestos board laid with tight staggered joints and nailed to the beams, when spaced not more than sixteen (16) inches on centers, or nailed to furring

strips when the floor beams are more than sixteen (16) inches on centers.

(c) Metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($3/4$) inch thick.

Rule 5. Attachment to Ceiling. Fire-retarding ceilings in non-fireproof buildings used as garages, motor vehicle repair shops or oil selling stations shall be attached to wood floor beams and girders in such manner as to maintain an air space between the wood beams, and all wood beams shall be seasoned before applying the protective coat.

Rule 6. Openings in Fire-Retarding Floors. Pipes or conduits which pass through floors shall be fitted with metal thimbles and made watertight for a height of three (3) inches above the floor.

Rule 7. Columns. All structural posts and columns in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials accepted in fireproof construction; except that an air space shall not be required around steel or cast iron columns.

Where necessary for protection against mechanical injury, the fire-retarding protection on columns shall be jacketed to a height of five (5) feet from the ground with No. 4 U. S. gauge metal.

Rule 8. Girders. All girders in non-fireproof buildings required to be fire-retarded shall be protected with the fire-retarding materials specified for ceiling coverings in these rules, or with any of the materials acceptable in fireproof construction; except that an air space need not be provided around steel girders.

Rule 9. Shaft Enclosures. Existing stairways and vertical shafts in non-fireproof business buildings hereafter converted to be used as garages, motor vehicle repair shops or oil selling stations shall be enclosed in fire-retarding partitions continued through the non-fireproof floor construction, and when unfilled wood stud partitions are used, the space between the floor beams shall be fire-stopped with incombustible materials. All openings in such partitions shall be protected with accepted metal-covered fire doors or windows. Wherever necessary for protection against mechanical injury, the partition shall be jacketed to a height of five (5) feet on the garage side with No. 4 U. S. gauge metal. Any one of the following forms of partitions shall be accepted for the enclosure:

(a) Two by four inch wood studs, spaced not more than sixteen (16) inches on centers, covered both sides with metal lath weighing not less than three pounds per square yard, attached to furring strips and plastered with Portland cement mortar at least three-quarters ($3/4$) of an inch thick;

(b) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($7/8$) inch wood sheathing, one-half ($1/2$) inch plaster boards with pointed joints and No. 26 U. S. gauge sheet metal with one-inch lapped seams;

(c) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, covered both sides with seven-eighths ($7/8$) inch wood sheathing, two thicknesses of one-quarter ($1/4$) inch asbestos boards laid with tight staggered joints and jacketed with No. 16 U. S. gauge metal on the garage side to a height of five (5) feet.

(d) Two by four inch wood studs spaced not more than sixteen (16) inches on centers, filled in solidly between the studs with four inches of approved fireproof materials and covered on both sides with No. 26 U. S. gauge metal;

(e) Existing wood stud, lath and plaster partitions covered on the garage side with No. 26 U. S. gauge sheet metal with one-inch lapped seams.

PUBLIC HEARING

PROPOSED AMENDMENTS TO RULES GOVERNING FIRE EXTINGUISHING APPLIANCES— SPRINKLER SYSTEMS.

[77-25-SR]

NOTICE IS HEREBY GIVEN that a public hearing will be held by the Board of Standards and Appeals on Tuesday, February 2, at 2 p. m., Room 1013, Municipal Building, on proposed amendments to Rules for Fire Extinguishing Appliances, Sprinkler Rules.

General Requirements. The rules contained herein cover the general details of a sprinkler equipment only. Before an equipment is installed or before a present equipment is remodeled, complete working plans should be submitted for approval to Fire Department.

These plans shall be drawn to an indicated scale; give correct address and points of compass; show sectional elevations of the building; and the essential features of the construction, viz., size, location and direction of joists, timbers or other structural members. They shall also indicate the location and size of water supplies, connecting pipes, feed mains and risers, gate, check, alarm and dry-pipe valves, as well as the location, spacing, number and type of sprinklers.

Upon approval of preliminary plans such number of sets of clean, corrected plans on cloth as the Fire Commissioner may require, not exceeding three (3), shall be filed for final approval of the Fire Commissioner. A certified copy of the approved plans shall be forwarded to the Bureau of Buildings by the Bureau of Fire Prevention. Such application and specification forms as may be prescribed by the Fire Commissioner shall accompany preliminary plans. If a standpipe (fire line) equipment is provided throughout the building, the plans shall include a note to that effect.

When entirely completed in accordance with the approved plans and as per test herein provided for, application shall be made to the Bureau of Fire Prevention for inspection of the completed installation. When the sprinkler equipment is approved the applicant will be so advised in writing by the Bureau of Fire Prevention.

All sprinkler equipments shall be installed in a thoroughly workmanlike manner.

Rule 1. Definition of Automatic Extinguisher Systems. Automatic extinguisher systems shall consist of a system of piping connected to one or more acceptable sources of water supply, or other extinguishing medium, provided with distributing devices so arranged and located as to discharge and diffuse automatically under the action of heat an effective stream or spray over every part of the interior of the building area in which a fire may start or to which it may be communicated.

Rule 2. Classification of Sprinkler Systems. For the purpose of these rules, sprinkler systems shall be classified as:

(a) Automatic Wet Pipe Systems, in which all pipes and sprinkler heads are at all times filled with water;

(b) Automatic Dry Pipe Systems, in which the pipes and sprinkler heads are filled with air, either compressed or at atmospheric pressure, and the water supply is operated by a Dry Pipe Valve as defined in Rule 27 of these Rules.

(c) Non-Automatic Systems, in which all pipes and sprinkler heads are maintained dry with a fire department connection for water supply.

Thermostatic fire alarm with direct connection to Central Office or Fire Department Headquarters shall be provided in connection with all non-automatic sprinkler systems.

Rule 3. Approved Devices. Automatic Sprinklers and accessory appliances shall include all devices approved as such by the Bureau of Standards, Washington, D. C.; by the Underwriters' Laboratories, Inc., of Chicago; by the Associated Factory Mutual Laboratories of Boston; and all devices which meet the tests prescribed by the Board of Standards and Appeals.

Rule 4. Water Supply. Approved sources of water supply shall be classified as Automatic and Auxiliary.

(a) Automatic Sources shall include the Gravity Tank, the Pressure Tank, [and] the Public Water System, and the Automatic Electric Fire Pump, installed as required under the provisions of Rule 8, hereinafter provided for.

b) Auxiliary Sources shall include the non-automatic Fire Pump and the Fire Department Connection.

Rule 5. Gravity Tank. Gravity tanks shall contain an available quantity of water sufficient to supply twenty-five per cent (25%) of the number of sprinkler heads in the average protected fire area for twenty (20) minutes, but not less than 5,000 gallons; and the bottom of the tank shall have an elevation of not less than twenty (20) feet above the highest line of sprinklers below the main roof. When the area of a pent house exceeds 2,500 sq. ft. the bottom of the tank shall be required to be not less than 20 feet above the highest line of sprinklers below the pent house roof, but where a pent house contains only pressure tanks this rule will not apply.

Where a tank capacity in excess of [25,000] 30,000 gallons is required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals, except when tanks of unlimited capacities are supported on structures altogether independent of buildings.

The tank shall be filled through a fixed pipe, independent of the sprinkler piping, not less than two (2) inches in size, discharging into the top of the tank, or through a by-pass not less than two (2) inches in size around the check valve in the discharge pipe, provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute.

The filling pipe shall be carried up inside a frost-proof casing and may extend through tank bottom to discharge at top of tank above full water level. The portion of pipe inside tank must be of brass or copper or other non-corrosive material.

Tanks shall not be fed through sprinkler lines.

The sprinkler and standpipe tanks may be fed from a common source of supply, either a pump or a direct service main connection, provided that there are separate feed mains from the basement or lowest story and a control valve in each feed line in a pump or engine room.

The overflow pipe shall be not less than two (2) inches in diameter for tanks up to 30,000 gallons capacity and not less than three (3) inches in diameter for larger tanks. The top of the overflow pipe shall be three (3) inches below the top of the staves in wooden tanks and one (1) inch from the top in steel tanks. The pipe may extend through the bottom of tank provided the portion inside tank is of brass or copper or other non-corrosive metal and without joints or it may extend through side of tank. For tanks over roofs overflow pipes shall terminate not more than twenty-four (24) inches above roof and shall be fitted with a 90 degree elbow.

The discharge, heating or filling pipes where exposed to the weather shall be protected from freezing by a frost-proof covering which may be of three layers of one-inch (1") hair felt interspersed with building paper well wrapped and secured and covered with canvas well painted or by frost-proof boxing as specified by the National Board of Fire Underwriters.

Easy access to top of each tank shall be provided by means of a steel gooseneck ladder substantially constructed and rigidly braced, the top of which shall not tip outward from the vertical at any point.

Tanks above roofs shall be constructed according to the requirements of the Building Code and supporting struc-

PUBLIC HEARING

tures shall be approved by the Superintendent of Buildings. Tanks not enclosed and exposed to the weather shall be covered with a double roof of acceptable construction consisting of a tight flat cover of matched boards and above this a conical roof which shall be covered with an approved roofing.

Where a gravity tank may supply both sprinklers and yard hydrants it shall not be of less than 30,000 gallons capacity and located on a structure altogether independent of buildings and the bottom shall not be less than 75 feet above the ground level, and not less than 20 feet above the highest line of sprinklers below the main roof of the highest building in a group of buildings.

Rule 6. Pressure Tank. Pressure tanks shall contain sufficient water to supply twelve and one-half per cent ($12\frac{1}{2}\%$) of the number of sprinklers in the average protected fire area for twenty (20) minutes, but not less than [5,000] 3,000 gallons of water for a wet pipe system where supplemented by an auxiliary water supply, and not less than 5,000 gallons of water for a dry-pipe system. No single tank shall have a capacity greater than 9,000 gallons. The tank shall be kept two-thirds ($2/3$) full of water under a pressure of seventy-five (75) pounds per square inch, and shall be so proportioned and located that a pressure of not less than fifteen (15) pounds per square inch will be available on the highest line of sprinklers below the main roof when all the water has been discharged from the tank.

[The tank shall be placed either on the roof or in the highest sprinklered story.]

A pressure tank or tanks shall not be located below the highest line of sprinklers supplied by tank or tanks.

Where [a tank] the total capacity of the pressure tank supply is in excess of [25,000] 30,000 gallons as required by this rule, the amount of water to be provided in excess of [25,000] 30,000 gallons shall be specified by the Board of Standards and Appeals.

The water shall be supplied through a fixed pipe, independent of the sprinkler piping, not less than [two] one and one-half ($1\frac{1}{2}$) inches in size [with a one and one-quarter ($1\frac{1}{4}$) inch connection to the tank], or through a by-pass not less than [two (2)] one and one-half ($1\frac{1}{2}$) inches in size around the check valve in the discharge pipe provided the supply is of sufficient pressure to fill the tank. The water supply and connections shall be capable of supplying the tank at a rate of not less than sixty-five (65) gallons per minute without reducing the pressure in the tank. The tank shall have a fixed metallic horizontal line on the end opposite the glass gauge, or other acceptable device, to indicate the level of the water when the tank is two-thirds full.

The air compressor shall be of sufficient capacity to increase the air pressure at the average rate of one (1) pound in two minutes in each pressure tank.

Rule 7. Public Water System. Direct connection to the city water supply shall be capable of furnishing water at not less than fifteen (15) pounds per square inch static pressure at the highest line of sprinklers under the main roof.

Subject to the requirements of the Department of Water Supply, Gas and Electricity, the size of each connection shall be as large as that of the main riser and not less than four (4) inches, and shall have a conveniently accessible control valve fixed to it at, or near, the curb, or, when possible, still further away from the building. The control valve shall be fitted with a frost and waterproof box, not less than four (4) feet nor more than six (6) feet below the curb, with a fixed stem extending to a compartment at the level of the sidewalk. The cover shall be bolted to the casing and shall be so marked as to be quickly located and to indicate the purpose of the valve. The valve shall be of indicating pattern, operated by a special socket wrench approved by the department of water supply, gas and electricity.

Where it is impractical to install a control valve box at the curb because of a vault under the sidewalk and within 18" thereof, the control valve may be located in the water supply connection at a point not more than two (2) feet from the point of entry into a vault.

Where a water meter is required in the water supply connection to an automatic sprinkler equipment, it shall be of a type which allows free flow of water and approved by the Department of Water Supply, Gas and Electricity, or a type of fire line meter which has been specifically approved by the Fire Commissioner for use in connection with fire extinguishing equipment.

Evidence establishing the fact that water supply conditions and pressures are as may be required shall be submitted to the Fire Department.

Rule 8. Fire Pump. An automatic electric fire pump as an automatic source of water supply is one approved for such use and controlled by an approved automatic controlling device, which shall be adjusted to maintain not less than 15 pounds water pressure at the highest sprinkler below main roof and in pent houses over 2,500 sq. ft., as provided in Rule 5. And shall receive water supply only from a direct connection to the city water main.

As auxiliary sources of water supply steam or electric standard fire pumps shall receive water supply from a suction tank, a direct connection to the city water main or other approved sources capable of supplying the pump at its rated capacity for sixty (60) minutes. The rated capacity of the pump shall be not less than five hundred (500) gallons per minute, and shall be sufficient to supply twenty-five per cent (25%) of the number of sprinklers in the average protected fire area.

The pump shall be located in a room of fireproof construction, properly ventilated, lighted and drained, enclosed in eight (8) inch brick or concrete walls with approved fire doors at openings and with fireproof floor and ceiling construction. If located in the lowest story of the building, the pump shall be placed on a foundation not less than one (1) foot in height. The pump room shall be readily accessible with safe egress for the attendant.

A reliable source of energy for driving the pump shall be provided. For steam pumps, provision shall be made for sufficient steam power to operate the pumps at full rated capacity, and a steam pressure of not less than fifty (50) pounds shall be maintained at the pump at all times. Where there is more than one boiler, the pipes and valves shall be so arranged to permit the cutting out of any one boiler without interrupting the steam supply to the pump from the other boilers. The boiler room shall be cut off from the remainder of the building by fireproof floor and wall construction with approved fire doors at all openings.

Electrical energy from a public service plant shall be acceptable as a source of energy for driving electric fire pumps. When local power plants supply the energy for operating electric pumps, two motor generator units shall be provided, or one generator unit supplemented by a public service break-down switch. Local electric power plants shall be located in rooms of fireproof construction with approved fire doors at openings.

Rule 9. Sprinkler Discharge. For the purpose of computing the capacity of water supplies, standard one-half ($\frac{1}{2}$) inch sprinkler heads shall be assumed to have an average discharge of twenty (20) gallons per minute, and the discharge of larger heads shall be computed proportionately in the ratio of the areas of their respective orifices.

Rule 10. Fire Area. A fire area is any floor space enclosed on all sides by exterior walls or fire walls or a combination of both. The number of sprinklers in the average protected fire area shall be determined by the number of sprinklered stories in such section. In

PUBLIC HEARING

determining the required capacity of water supplies, the number of sprinklers in the average protected fire area need not include those located in low positions, such as under benches, low shelves, closets and platforms and between cars in car barns.

Rule 11. Fire Department Connection. All automatic sprinkler systems shall be provided with at least one two-way Siamese connection on each street front of the building for connection to the fire department hose. Buildings fronting on only one street shall be provided with at least two Siamese connections when the street frontage of building exceeds [one hundred and fifty (150)] two hundred (200) feet [in width].

Where buildings have frontages on more than one street there shall be a fire department connection on each street front where frontage is not continuous but in all cases where more than one fire department connection is required they shall be located as the Fire Commissioner may direct and shall not be grouped.

All Siamese hose connections hereafter installed, except those on piers or warehouses intended for fire boat use, shall be three (3) inches in size. Fire boat connections shall be three and one-half (3½) inches in size. All hose connections shall be female, with standard fire department threads.

The inlets shall be placed at least eighteen (18) inches and not more than two (2) feet above the sidewalk, in a horizontal position accessible to the fire department, and shall be provided with a four (4) inch discharge connecting with a four (4) inch pipe to the sprinkler system for three (3) inch fire department connection and with a six (6) inch discharge outlet and six (6) inch pipe for three and one-half (3½) inch fire boat connection. Each inlet shall be provided with a clapper valve machined to a true face.

Each Siamese connection shall be designated by raised letters at least one (1) inch in size, cast in the fitting in a clear and prominent manner and reading for the service designated, viz.: "Base. Spkr.," etc., as the case may be. If the entire building is sprinklered, the fitting shall be marked "Auto. Spkr."

Siamese hose connections may project through a street wall not more than twelve (12) inches beyond the building line except that where there is an angle formed by the street wall and a check piece or the base of a column, pilaster or ornamental projection, they may be so located that no part extends more than fifteen (15) inches from either side of such angle in accordance with the provisions of the Building Code.

In each fire department connection there shall be an approved straightway check valve installed in a horizontal position, unless suitably designed for vertical position, and the piping shall be arranged to drain between the check valve and the outside siamese coupling by either a ball drip having a one-half (½) inch pipe connection and one-half (½) inch orifice and a bronze ball of proper size, or by a three-quarter (¾) inch drip connection, with plugged valve attached, and when necessary arranged to drain to a sewer. A drain connection may be tapped into the body of check valve only when located in a horizontal position.

Rule 12. Automatic Sprinkler Systems. Automatic sprinkler systems shall be classified as:

(a) One Source Systems, supplied with water from any one of the automatic sources; and

(b) Two Source Systems, supplied with water from a combination of any two of the automatic sources; two pressure tanks with a total water capacity twice that required for a one source supply; direct connection to the city water supply on two different streets, so located that the closing of the controlling valve on one main will not eliminate the main on the other street; or a direct connection to the city water supply and one of the auxiliary sources provided the water supply main is at least six (6) inches in size, the main is fed both

ways and a two (2) inch test pipe at the top of the sprinkler riser shows a flowing pressure of fifteen (15) pounds per square inch between the hours of six a. m. to six p. m.

A gravity tank and pressure tank, or a gravity tank or pressure tank and one of the automatic sources or two pressure tanks having a total water capacity for a one-source supply may be considered as a two-source supply where the occupancy of the building does not conflict with Rules 38, 39 and 40 hereinafter provided for.

Rule 13. Sprinkler Spacing. Sprinkler heads and lines shall be spaced as herein provided:

Mill Construction. Under mill ceiling (smooth solid plank and timber construction, 5 to 12 foot bays) one line of sprinklers shall be placed in the center of each bay and the distance between the heads on each line shall not exceed the following:

(a) For Standard one-half (½) inch heads—

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 10 foot bays;
- 11 feet in 9 foot bays;
- 12 feet in 5 to 8 foot bays;

(b) For Conran* one (1) inch heads—

- 20 feet in 5 to 12 foot bays.

(c) For Conran* one and one-quarter (1¼) inch heads—

- 25 feet in 5 to 12 foot bays.

(d) Vaults used for the storage of nitro-cellulose products and vaults used for the storage of inflammable motion picture films shall have one standard one-half (½) inch head for each 62½ cubic feet of available storage space, or one (1) inch Conran* head for each 250 cubic feet of available storage space.

Measurements shall be taken from center to center of timbers.

Ceilings of modified mill construction having bays less than three (3) feet wide shall be treated as open joist construction and sprinkler heads and lines spaced accordingly.

Bay timbers spaced three (3) feet or more on centers, but less than five (5) feet on centers, will require special ruling by the administrative official having jurisdiction.

Joisted Construction. Under open finish joisted construction ceilings, floor, decks and roofs, the sprinkler lines shall be run at right angles to the joists and the heads "Staggered spaced" so that heads on one line will be opposite a point half way between heads on adjacent lines.

(a) For Standard one-half (½) inch heads the distance between lines of sprinklers shall not exceed ten (10) feet, and the distance between heads on each line shall not exceed eight (8) feet, the end heads on alternate lines being spaced not more than two (2) feet from wall or partition. Permission may be given by the administrative official having jurisdiction to install but one line of sprinklers, in each bay where girders project below the under side of joists and divide the ceiling into bays ten (10) to eleven and one-half (11½) feet wide from center to center of girders, and the heads shall then be spaced on each line so that the area covered by a single head does not exceed eighty (80) square feet. In all cases where such bays are over eleven and one-half (11½) feet wide, two or more lines of sprinklers shall be installed in each bay as required by the rules for spacing.

*Wherever the term "Conran head" is used in these Rules, it is to be taken as meaning either a Conran head of the type tested and approved by the Fire Department, or one that has passed similar tests by the Fire Department.

PUBLIC HEARING

Where girders and joists are flush at the bottom, heads shall be spaced according to the general rule.

(b) For Conran* one (1) inch heads the distance between adjacent lines shall not exceed twenty (20) feet and the distance between the heads on each line shall not exceed sixteen (16) feet, the end heads on alternate lines being spaced not more than four (4) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty (20) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty (20) feet in width at least two (2) lines shall be installed in each bay and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads the distance between adjacent lines shall not exceed twenty-five (25) feet and the distance between the head on each line shall not exceed twenty (20) feet, the end head on alternate lines being spaced not more than five (5) feet from wall or partition. Where girders project below the under side of joists and divide the ceiling into bays not exceeding twenty-five (25) feet in width, measured from center to center of girders, one line shall be placed in the center of each bay. In bays exceeding twenty-five (25) feet in width at least two (2) lines shall be installed in each bay, and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Smooth Finish, Sheathed or Plastered Ceilings. Under smooth finish, sheathed or plastered ceilings, in bays six (6) feet wide and over (measurements to be taken from center to center of timber, girder or other projection or support forming the bay), sprinkler heads and lines shall be spaced as follows:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twelve (12) feet in width, and the distance between the heads on each line shall not exceed the following:

- 8 feet in 12 foot bays;
- 9 feet in 11 foot bays;
- 10 feet in 8 to 10 foot bays.

Bays in excess of twelve (12) feet in width and less than twenty-three (23) feet in width, shall contain at least two (2) lines of sprinklers; bays twenty-three (23) feet in width or over shall have the lines therein not over ten (10) feet apart. In bays in excess of twelve (12) feet in width, not more than one hundred (100) square feet of ceiling area shall be allotted to any single head.

(b) For Conran* one (1) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty (20) feet in width, and the distance between the heads on each line shall not exceed twenty (20) feet. Bays in excess of twenty (20) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty (20) feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

One line of sprinklers shall be placed in the center of each bay for bays not exceeding twenty-five (25) feet in width and the distance between the heads on each line shall not exceed twenty-five (25) feet. Bays in excess of twenty-five (25) feet in width shall contain at least two (2) lines and in no case shall the distance between adjacent lines exceed twenty-five (25) feet.

Fireproof Construction. The rules of slow-burning mill construction shall apply as far as practicable. The rule may be modified, however, the intent being to arrange the spacing of heads to protect the contents rather than the ceilings; but in no case shall the distance between a head on one line and a head on an adjacent line exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 12 feet.

(b) For Conran one (1) inch heads, 20 feet.

(c) For Conran one and one-quarter ($1\frac{1}{4}$) inch heads, 25 feet.

Distance From Walls. The distance from wall or partition to the first head on a sprinkler line shall not exceed one-half the allowable distance between the heads on such line. Additional heads may be required in the narrow pockets formed by bay timbers or beams and wall. Where beams, girders, columns, walls, partitions or other obstructions prevent the effective discharge of water, additional heads shall be installed to effectively sprinkle the area.

Vertical Shafts. In vertical shafts having inflammable sides, heads shall be provided within the shaft in addition to the head or heads at the tops of shafts, as follows:

(a) One standard one-half ($\frac{1}{2}$) inch head for each 200 square feet of inflammable surface.

(b) One Conran* one (1) inch head for each 400 square feet of inflammable surface.

(c) One Conran* one and one-quarter ($1\frac{1}{4}$) inch head for each 500 square feet of inflammable surface.

Such head or heads shall be installed at each floor when practicable, and always when shaft is trapped. Where practicable, heads shall be "staggered" at the alternate floor levels, particularly when only one head is installed at each floor level.

Pitched Roofs. Under a pitched roof sloping more steeply than one (1) foot in three (3) feet, heads shall be located in peak of roof, and those on either side of the peak shall be spaced according to the foregoing requirements. The distance between heads shall be measured on a line parallel with the roof. Where the roof meets the side wall or the floor line, the heads shall be placed not more than the following distance from such intersection:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $3\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 7 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $8\frac{1}{2}$ feet.

Heads spaced not to exceed the following distance each way from the peak of roof, measured on a line parallel with the roof, may be used in lieu of heads located in peak of roof.

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

In sawtooth roof construction, the end heads on the branch line shall be spaced not to exceed the following distance from the peak of the sawtooth:

(a) For standard one-half ($\frac{1}{2}$) inch heads, $2\frac{1}{2}$ feet.

(b) For Conran* one (1) inch heads, 5 feet.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, $6\frac{1}{4}$ feet.

Special Locations and Variations. In special locations, such as over electric generating, power and transforming apparatus, over their controlling devices and switchboards, where water from the fire extinguishing equipment would be detrimental, the sprinkler lines and heads may be omitted at the discretion of the administrative official having jurisdiction, and when in his judgment a slight variation of this rule of spacing is desirable to effect a more efficient distribution of water for fire extinguishing purposes, the sprinkler lines and heads shall be spaced as he may direct.

Rule 14. Sprinkler Position. All sprinkler heads shall be located, wherever possible, in an upright position on top of the pipes, except that sprinkler heads on automatic wet pipe systems may be pendant on concealed piping and when construction or occupancy of a room or enclosure makes it preferable.

(a) Where standard one-half ($\frac{1}{2}$) inch heads are installed sprinkler deflectors shall be parallel to ceilings, roofs or the

PUBLIC HEARING

incline of stairs, but when installed in the peak of a pitched roof they shall be horizontal. Distance of deflectors from ceilings of mill or other smooth construction, or bottom of joists of open joist construction, shall be not less than three (3) inches nor more than ten (10) inches.

In fireproof buildings, the distance between deflectors and panel ceilings shall not exceed fifteen (15) inches.

Not less than eighteen (18) inches effective clear space shall be left below the sprinkler heads, so that they may discharge an unbroken spray blanket from sprinkler to sprinkler and sides of room when in operation. Any stock piles, racks or other obstructions interfering with such action shall not be permitted. *Sprinkler system piping shall not be used for the support of stock, clothing, etc.*

(b) Where Conran* heads are installed, the top of head shall be located the same distance below joists or ceiling as specified for deflectors in paragraph (a) of this rule; except that when heads are located under pitched roofs of piers or similar structures, they shall in general be installed in the upright position (not normal to slope of roof) and three (3) feet vertically below the underside of roof. When the administrative official having jurisdiction deems a variation of this rule advisable to obtain a more efficient distribution of water, the heads shall be located with respect to joists or ceiling, as he may direct.

Rule 15. Pipe Sizes. The number of heads on a given size pipe in one fire area in any story shall not exceed the following:

(a) For standard one-half ($\frac{1}{2}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$\frac{3}{4}$ inch	1 head
1 "	2 heads
$1\frac{1}{4}$ "	3 "
$1\frac{1}{2}$ "	5 "
2 "	10 "
$2\frac{1}{2}$ "	20 "
3 "	36 "
$3\frac{1}{2}$ "	55 "
4 "	80 "
5 "	140 "
6 "	200 "
7 "	300 "
8 "	420 "

(b) For Conran* one (1) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
1 inch	1 head
$1\frac{1}{4}$ "	2 heads
$1\frac{1}{2}$ "	3 "
2 "	4 "
$2\frac{1}{2}$ "	6 "
3 "	9 "
4 "	18 "
5 "	34 "
6 "	51 "
7 "	75 "
8 "	103 "

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads—

Size of Pipe	Maximum No. of Heads Allowed
$1\frac{1}{4}$ inch	1 head
$1\frac{1}{2}$ "	2 heads
2 "	3 "
$2\frac{1}{2}$ "	4 "
3 "	6 "
4 "	12 "
5 "	21 "
6 "	40 "
7 "	60 "
8 "	84 "

When it is desired to use pipe of larger size than eight (8) inches in diameter, special ruling will be required by the administrative official having jurisdiction as to the permissibility of its use and the number of heads that may be fed thereby.

Where practicable, it is desirable to arrange the piping so that the number of heads on a branch line will not exceed eight.

When the piping is arranged on the "gridiron" plan, the permissible number of heads may be doubled, provided the feed main is of the size indicated in the schedule for the total number of heads.

Where feed mains supply branch lines of only two heads each, the conditions approach those of long single lines. Such feed mains shall usually be centrally supplied where there are over eight (8) or ten (10) branch lines. Branch lines up to fourteen (14) in number may be fed from end, provided a two and one-half ($2\frac{1}{2}$) inch pipe does not supply more than sixteen (16) standard one-half ($\frac{1}{2}$) inch heads, in lieu of twenty (20).

Buildings having slatted floors, or large unprotected floor openings without approved stops, shall be treated as one room with reference to the pipe sizes, and the feed main shall be of sufficient size to accommodate the number of heads called for. Larger pipe sizes than are allowed in the schedule for a given number of heads may be required wherever the construction or conditions introduce unusually long runs of feed mains or many angles. Buildings with blind attics with small unprotected openings to floor below, may be piped from the system on the ceiling of floor below, provided pipe size schedule is not overloaded on sizes three (3) inches or under.

Rule 16. Feed Mains. The size of feed mains shall not be less than the size of riser and shall be arranged to run as direct as possible from source of water supply to riser.

Feed mains for stair or other towers without approved stops between floors, when piped on independent riser, shall be of sufficient size to accommodate the total number of sprinklers in such tower.

Rule 17. Risers. There shall be one or more separate risers in each building and in each section of the building divided by fire walls. Risers shall be arranged to provide "Center Central" or "Side Central" supply to feed main. Each riser shall be of sufficient size to supply all the heads on said riser in one story, according to the schedule of pipe sizes in Rule 15.

In buildings of fireproof construction, and for the purposes of this rule, a blank wall, or one in which the openings are protected by standard fire doors, may be considered as a fire wall, if of equivalent construction.

If the conditions warrant, special permission will be granted allowing the heads in a fire section of small area to be fed from the risers in another section, provided the total number of heads in such area does not exceed the following number per floor:

(a) For standard one-half ($\frac{1}{2}$) inch heads, 48.

(b) For Conran* one (1) inch heads, 12.

(c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads, 8.

Risers shall not be located close to windows, properly protected from mechanical injury and freezing and shall be properly supported on foundations and by floor plates, clamps, couplings or hangers.

No connections, such as for sill cocks, house service or hose outlets, shall be made with a sprinkler system riser or any part thereof.

Where gravity and pressure tanks feed through a common discharge pipe or "dead riser" to the foot of a riser and an air lock is likely to develop the discharge pipe of the gravity tank shall connect with the discharge pipe, or "dead riser", forty (40) feet below the bottom of the pressure tank.

PUBLIC HEARING

Rule 18. Pipes and Fittings. All pipe shall be full-weight standard wrought iron or steel threaded pipe, well reamed and screwed up tight into fittings without reducing the waterway. Fittings shall be standard cast iron fittings, and shall be long turn pattern on feed mains and risers.

Such fittings shall be designed and guaranteed for a working pressure of 150 pounds per square inch and must be capable of withstanding a hydrostatic test pressure of 750 pounds per square inch without failure.

All pipe shall be secured to the ceiling, walls and other parts of the building with standard steel, wrought or malleable iron hangers.

Extra heavy fittings shall be employed where the normal pressure in the pipe system exceeds one hundred and fifty (150) pounds per square inch, and shall be designed for a working pressure of 250 pounds per square inch and be capable of withstanding a hydrostatic test pressure of 1,250 pounds per square inch without failure.

All underground pipe shall comply with the specifications for cast iron pipe of the American Water Works Association.

Rule 19. Protection of Pipes and Sprinklers. When exposed to moisture, sprinkler pipes and hangers shall be protected against corrosion whenever found necessary by thoroughly cleaning the pipe of all scale and grease and painting with a coat of red lead and linseed oil paint or other acceptable moisture resistive paint. When exposed to chemical fumes, the pipe and fittings shall be coated with graphite or other approved chemical resistive paint. Care shall be taken not to paint the sprinkler heads.

Supply pipes of risers in low basements or low spaces under ground floors exposed to frost, shall be properly protected by a masonry or wood enclosure, properly heated, or filled with mineral wool, sawdust or tar mixed with granulated cork, extending below bottom of pipe and through the top flooring of ground floor, or the pipe shall be protected with three alternate layers of one-inch hair felt and building paper or by other approved method. When of wood, such enclosure shall be constructed double with a layer of tar paper between the two thicknesses of wood.

Where risers, drains, heating pipes, etc., pass through cinder concrete floors or partitions, they shall be protected with a metal sleeve or be grouted with cement mortar.

Wherever sprinklers are exposed to corrosion, the heads shall be protected with an approved hermetically sealed cover, or with an approved wax coating.

Rule 20. Drainage. All sprinkler pipe and fittings shall be so installed that they can be thoroughly drained, and where practicable, all piping shall be arranged to drain at the main drips.

Drains or drip pipes shall be so arranged as not to expose any part of the sprinkler system to frost, and shall be so connected, either by check valves or other means, that they will not [overthrow] overflow domestic service or other connections to the same sewer or house drain, or if carried through the wall and exposed to the weather, they shall be fitted with hoods or down-turned elbows.

Drains, pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet, shall be installed:

- At the base of the main riser;
- At each alarm valve;
- At each dry-pipe valve;
- At each gravity tank;
- At each pressure tank.

At each fire department connection;

On each floor, if independent floor control valves are used; and

At each supply main, when the water in the same cannot be removed through any of the above drains. Such drains shall be installed with controlling valves so that flowing tests may be made to determine if the water supplies or connections from yard mains to the inside of the build-

ing are in order without causing water damage or overflowing service connections to the same house drain. Any such drain shall be not less than two (2) inches in size except that drains at independent floor valves [may be one and one-quarter ($1\frac{1}{4}$) inches in size] shall be not less than 1 inch in size where floor valves are not over $2\frac{1}{2}$ inches in size and $1\frac{1}{4}$ inches where floor valves are larger, and connected to a main drain riser of not less than $1\frac{1}{2}$ inches in size. The drain at the main riser shall discharge into a cone or sight drain, or if carried through the wall and exposed to the weather, it shall be fitted with a hood or down-turned elbow.

At an alarm valve at the top of a riser in a down-fed system a drain shall not be required.

At each gravity or pressure tank erected above roof of a building there shall be a 4-inch valved drain connection so arranged as to discharge on roof of building. And where a tank is on a separate structure altogether independent of buildings drain connection to be arranged to discharge at ground level.

On automatic wet pipe systems, the horizontal branch pipes shall be pitched not less than one-quarter ($\frac{1}{4}$) inch in ten (10) feet to drain towards the sources of supply with drip valves at the low points.

On automatic dry-pipe systems, branch pipes shall be pitched at least one-half ($\frac{1}{2}$) inch in ten (10) feet.

Rule 21. Test Pipe. [On] In all wet-pipe automatic sprinkler systems a test pipe of not less than $\frac{3}{4}$ inch in diameter shall be connected directly with each [riser] system but shall be connected to a pipe of not less than $1\frac{3}{4}$ inches in diameter in upper story and arranged to discharge, through a $\frac{1}{2}$ -inch brass outlet, preferably to a point where it can readily be seen. With long runs or many angles, size of test pipe [shall] should be increased to one (1) inch or larger. Controlling valve should be located at a sufficient distance from where the test pipe passes through the wall of the building so as to reduce to a minimum the chance of freezing of water in test pipe.

In all dry-pipe automatic sprinkler systems a $\frac{3}{4}$ -inch inspector's test pipe shall be installed at the end of the most distant branch line and fitted with a $\frac{3}{4}$ -inch shut-off valve stopped with a brass plug.

Rule 22. Pressure Gauges. A four and one-half ($4\frac{1}{2}$) inch double-spring Bourdon pressure gauge shall be provided in all automatic sprinkler systems as follows:

- Above dry-pipe valves;
- Below dry-pipe valves;
- At the pressure tank;
- At the air compressor;
- Above the alarm valve;
- Below the alarm valve; and

In the connections from city water supply.

Provision may be made for taking the pressure both above and below the alarm valve and the dry-pipe valve with only one gauge at each valve.

A gauge shall not be required at an alarm valve located at the top of a riser in a down-fed system.

Gauge connections shall be taken from the supply main or riser and not from the two-inch drain or test pipe.

Gauges shall be installed in a suitable place protected from freezing and be controlled by a valve with arrangements for draining. A plugged outlet, not less than one-quarter ($\frac{1}{4}$) inch in size, shall be located between each valve and gauge for purpose of installing the inspector's gauge.

Rule 23. Valves. All valves two (2) inches in diameter and under shall be of brass or bronze, or other approved [non-corrodible] non-corrosive material. Valves over two (2) inches in diameter shall be of brass, or bronze or iron body, brass mounted, or of other approved [non-corrodible] non-corrosive material.

All sidewalk Siamese inlet valves, caps and chains shall be of galvanized cast iron or other approved [non-corrodible] non-corrosive material.

PUBLIC HEARING

All gate valves shall be solid or double wedge disc, sufficing box pattern with hand wheel, outside screw and yoke, or other approved indicator pattern.

All check valves shall be approved straight way regrinding pattern, so built that the clappers may be readily removed for repairs.

Rule 24. Water Supply Gate Valves. The piping connecting each source of water supply with the sprinkler system shall be provided with a gate valve of the outside screw and yoke type, sealed open and tagged to designate its purpose, so located as to control each source of water supply except that from fire department hose connections. All such gate valves shall be located within the building where easily visible and readily accessible and as close as possible to the supply inlet.

Rule 25. Water Supply Check Valves. The piping connecting each source of water supply with the sprinkler system, including fire department connections, shall be provided with a check valve.

On two-source systems, check valves shall have a gate valve on each side to permit repair of check without shutting off both supplies, except that where the two sources of supply consist of tanks located above the highest line of sprinklers, a gate valve need only be provided on the downstream side of each check valve.

Rule 26. Control Valves. All automatic sprinkler systems shall be provided with a main control or shutoff valve arranged to be readily accessible and sealed in the open position; except that when the sprinkler system is fed from water supplies on the roof of the building, independent and readily accessible floor control valves, sealed in the open position, may be installed.

When not more than ten (10) standard one-half ($\frac{1}{2}$) inch sprinkler heads or three (3) Conran* heads in any automatic wet pipe system are exposed to cold and subject to freezing, shutoff valves may be provided to discontinue the water supply to such heads between November 1 and April 1. A greater number of heads than specified above, located in places which cannot be properly heated, shall be controlled by an automatic dry-pipe valve.

Rule 27. Dry-Pipe Valves. A dry-pipe valve shall be taken to mean a valve automatically controlling the water supply of the sprinkler system in such a manner that under normal conditions its piping system beyond the valve is maintained dry, but in the event of fire, the valve automatically releases the water into the sprinkler system, for fire extinguishing purposes.

Dry-pipe valves shall, for the purpose of these rules, be classified as follows:

Type A, in which the valve is actuated by the release of compressed air in the sprinkler piping system, due to the opening of a sprinkler head; and

Type B, in which the valve is actuated by an approved trip under electric control of an approved automatic thermostatic fire alarm system.

Dry-pipe valves shall be located as near as practicable to the sprinkler system in an enclosed and accessible place protected from mechanical injury and freezing.

When anti-columning pipes are used, they shall be either lead lined or of brass.

Automatic wet-pipe sprinkler systems in which only twenty-five (25) per cent of the heads are required to be maintained dry for protection from freezing, shall have only such heads under dry-pipe valve control.

(a) When "Type A" valve is installed, the air pressure in sprinkler systems under such dry-pipe valve control shall not exceed forty (40) pounds per square inch, nor be permitted to fall below twenty-five (25) pounds per square inch, nor shall it be less than one-sixth ($\frac{1}{6}$) of the water pressure in any case.

The air compressor shall have a capacity of not less than eleven (11) cubic feet per minute and the air supply for the pump shall be taken, if possible, from a room containing dry air, or it shall be passed through a drying chamber containing calcium chloride, in order to avoid the introduction of moisture into the system.

The air pressure on such dry-pipe systems shall be maintained throughout the year.

Not more than the following number of heads shall be controlled by one "Type A" dry-pipe valve:

- (a) For standard one-half ($\frac{1}{2}$) inch heads400
- (b) For Conran* one (1) inch heads100
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads 64

Where equipped with an approved quick-opening device the following number of heads may be controlled by one "Type A" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads800
- (b) For Conran* one (1) inch heads200
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads.128

(b) When "Type B" valve is installed the actuating alarm system shall be designed to operate at a temperature lower than that required to open the sprinkler heads, and all connections between the alarm system and the dry-pipe valve shall be adequately protected against injury of any kind.

When required by the administrative official having jurisdiction, the dead end of every feed main in such dry-pipe system shall be provided with an air relief valve or vent, so constructed as to be normally open in order to permit the free escape of air from the system, but to close automatically against the escape of water.

Not more than the following number of heads shall be controlled by one "Type B" dry-pipe valve:

- (a) For Standard one-half ($\frac{1}{2}$) inch heads500
- (b) For Conran* one (1) inch heads125
- (c) For Conran* one and one-quarter ($1\frac{1}{4}$) inch heads. 84

Rule 28. Alarm Valve. All automatic wet pipe sprinkler systems shall be equipped with an alarm valve so constructed that a flow of water through a one-half ($\frac{1}{2}$) inch orifice will operate an electric or mechanical gong.

Dry pipe valves shall be equipped with a reliable device to give either an electrical or mechanical alarm.

Rule 29. High and Low Water and Pressure Alarm. All gravity tanks shall be equipped with a device to indicate when the water falls below or rises above the normal level in the tank, with an indicator or alarm located in the engineer's room near the pump.

All pressure tanks shall be equipped with a device to indicate when the pressure in the tank falls below seventy (70) or rises above eighty (80) pounds per square inch with an indicator or alarm located in the engineer's room [near the compressor].

Rule 30. Heating of Tanks. The water in all sprinkler tanks subject to freezing shall be protected by internally heating the water or enclosing the tank in a frost-proof house properly heated and lighted.

Rule 31. Concealed Pipe Systems. All pipe in concealed pipe systems shall be of standard full-weight wrought iron or steel, painted with two coats of protective paint, one before and one after installation. Such pipe shall be installed in ducts or be encased in cement mortar and shall be inspected prior to concealment. When installed in the concealed space between floor arches and ceiling, such pipe shall be supported by hangers and all pipe, fittings and hangers be protected with two coats of paint.

Rule 32. Preparation of Building. Floor or wall openings and other structural defects which prevent the banking up of heated air and retard the automatic action of sprinkler heads shall be provided with the necessary curtain boards and draft stops to permit specific control of the fire by the local sprinklers.

Curtain boards shall project at least three (3) inches below the lowest sprinkler.

PUBLIC HEARING

Rule 33. *Approval of Sprinkler System [Tests]. Before acceptance* all automatic sprinkler systems, excluding the water supply tanks, shall be subjected after installation to a hydrostatic pressure of a test of at least fifty (50) pounds per square inch in excess of that which will be normally carried and observed in the sprinkler system, **such test pressure, however, never to be less than one hundred and fifty (150) pounds per square inch in any part of the system.**

All pressure tanks shall be tested after erection to a test pressure of one and one-half ($1\frac{1}{2}$) times the working pressure. To prevent the possibility of serious water damage in case of a break, the pressure shall be maintained by a **small pump, the main controlling gate being meanwhile kept shut.** Brine or other corrosive chemicals shall not be used for testing systems.

In automatic dry-pipe systems with "Type A" valve control, an air pressure of forty (40) pounds per square inch shall be pumped up, be held for twenty-four (24) hours, and all leaks stopped which allow a loss of pressure of over two (2) pounds per square inch for the twenty-four (24) hours.

In the case of automatic dry-pipe systems with differential "Type A" valve, the valve shall be held off its seat during the test to prevent injuring the valve.

Non-automatic systems shall be tested after installation at not less than fifty (50) pounds per square inch in excess of the pressure necessary to reach the highest line of sprinklers.

All tests of installed systems shall be made by the contractor in the presence of the Fire Commissioner, or his authorized representative.

No piping, devices nor any portion of a newly constructed sprinkler system shall be covered up or permanently concealed until tested by the Bureau of Fire Prevention and approved of in writing, except piping passing through floors, walls, partitions or beams for distances equal to the thickness of such floors, walls, partitions or beams.

Rule 34. *Non-fireproof Business Buildings.* Automatic sprinklers required in non-fireproof business buildings under the provisions of Chapter 5, Article 4, Section 72, Code of Ordinances, unless otherwise specifically provided in these rules, shall consist of at least a One Source System.

Rule 35. *Dangerous or Hazardous Buildings.* Automatic sprinklers required in buildings having occupancies considered to be dangerous or hazardous by the Fire Commissioner shall consist of at least a one-source system unless otherwise specifically provided for in these rules.

Rule 36. *Factories and other Buildings.* Automatic sprinklers required in buildings under the provisions of the Code of Ordinances and the Labor Law shall consist of at least a one-source system.

Rule [35] 37. *Theatre Buildings.* Automatic sprinklers required in theatre buildings under the provisions of Chapter 5, Article 25, Section 524, Code of Ordinances, shall consist of at least a One Source System.

Rule [36] 38. *Firework Storage.* Automatic sprinklers required in buildings in which fireworks are stored or sold under the provisions of Chapter 10, Article 6, Section 92, Code of Ordinances, shall consist of a Two Source System.

Rule [37] 39. *Nitro-Cellulose Products.* Automatic sprinklers as required in buildings in which nitro-cellulose products are stored under the provisions of Chapter 10, Article 19, Section 232, Code of Ordinances, shall consist of a system supplied from both approved gravity tank supply and an approved pressure tank supply, except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems, in conformity with the provisions of this rule as in force up to December 1, 1921.

In buildings wherein are stored or handled only limited quantities of nitro-cellulose products, not exceeding 500 pounds, the automatic sprinklers may consist of a two source system as provided for in Rule 12.

Rule [38] 40. *Inflammable Motion-Picture Films.* Automatic sprinklers, required in buildings in which inflammable motion-picture films are stored under the provisions of Chapter 10, Article 20, Section 241, Code of Ordinances, shall consist of a system supplied from both an approved gravity tank supply and an approved pressure tank supply except that no change shall be required in supplies to automatic sprinkler equipments previously approved by the Fire Commissioner as two source systems in conformity with the provisions of this rule as in force up to December 1st, 1921.

Rule [39] 41. *Existing Installations and Approvals.* Automatic extinguisher systems and devices heretofore approved and accepted by the authorities having jurisdiction shall not be required to conform to the provisions of these rules; and all such systems heretofore installed shall not be required to be altered to conform to these rules so long as the fire hazard due to construction and occupancy of the building is not increased **or where substantial additions or extensions in height or area is made to the building when these rules shall apply if deemed advisable or necessary by the Fire Commissioner and the system after inspection is found to be in good working order.**

Rule 42. *Communicating Openings.* When a building fully equipped with sprinklers communicates with another not so equipped the openings must be protected by approved fire doors on both sides of the wall, one of which must be automatic.

Rule 43. *Maintenance Inspections.* Automatic sprinkler systems shall be inspected at least once a month by the person in charge of the building, or by other competent person employed by the owner, to see that all parts of the system are in perfect working order, and the fire department connection or connections, if any, ready for immediate use by the Fire Department. A detailed record of each inspection shall be kept for examination by a representative of the Fire Department.

There shall be kept available at all times in the premises a supply of extra sprinklers, never less than six (6), to replace promptly any fused or damaged sprinklers. And there shall be one or more employees instructed in the maintenance of sprinkler system.

Rule 44. *Open Sprinklers.* When open sprinklers are required for exposure protection by the Fire Department as specified in the Building Code they shall be installed in accordance with the rules of the National Board of Fire Underwriters. Plans for such installation to be filed with the Fire Department for approval.

FORMS FOR NOTICES TO PROPERTY OWNERS

If applicants, under the building zone resolution, desire copies of Form 13A, for notices to property owners, such forms are not to be supplied by this office.

The applicant is entitled only to one copy of Form 13A, properly filled out.

If he desires additional copies for his own convenience in notifying property owners, he can obtain such copies from The O'Connell Press, 176 Park Row, Manhattan, at three cents each, postage to be added if the forms are to be supplied by mail.

WARNING.

Notice is hereby given to all petitioners, appellants and applicants for relief at the hands of the Board of Standards and Appeals, and to all lawyers, architects and engineers representing owners or lessees in proceedings before the board—

First, That if they do not appear in person or by representative at the hearing on their case, dismissal for lack of prosecution is likely to result.

Second, That due and ample notice of the date set for hearing is provided in the publication in this BULLETIN of the calendars of the board, each case being set down by Calendar Number and premises under the date of the hearing.

Third, That no plea of ignorance of the date of the hearing can be entertained in view of this publication and

of the posting of the calendars on the bulletin board in the offices of the board and of the further publication of the calendars in the daily press.

Fourth, That no one is entitled to written notice of the date for the hearing in his case, and that the plea of failure to receive such notice is no excuse for neglect to appear.

Fifth, That the business of the board is to dispose of all cases promptly, for the reason that the pendency of an appeal or petition ties the hands of the administrative official in enforcing his order; therefore, no appeal or petition will be allowed to be hung up by reason of failure of the appellant or petitioner to file necessary data, or by any other method of delay.

BOARD OF STANDARDS AND APPEALS,
Room 1001, Municipal Building,
New York City.

Enclosed please find two dollars and a half (\$2.50) for subscription for one year to THE BULLETIN OF THE BOARD OF STANDARDS AND APPEALS. Please mail THE BULLETIN to
